9) Eat My Bollocks (512K, colour, STE, STFM) Brilliant. All chip music but very nice effects, very slick. Better all chip noise than a poor STFM sample eh !
10) Overdose (512K, colour, STE, STFM) More Agression coding, more Agression quality ! Not as good as Brain Damage due to STFM compatibility, but still well produced. Highlight is a _beautiful_ spinning raytraced spaceship with lots
of frames. It only lasts a few seconds though !
11) Dynamite (1Mb, colour, mono, STE/TT) A selection of (some well known) songs using Unit 17's 8 voice EPSS replay system. Nice beat ! Slick graphics, with
spectrum analyzer bars and oscilloscope. You can also connect your MIDI keyboard and use this demo as a MIDI sound module ! Reset proof.

That's all I can think of right now,

bye !

S.Lai :)

Hi,

I said previously:

>This isn't the first time I had troubles with Hsmodem and Mint. I had it
>running stable once using Mint 1.10 (pure C 1.1 compiled) and running
>hsmodem before mint.

This was with Hsmodem 5. I got hsmodem 6 yesterday and running it before
Mint 1.12 does the trick. RTS/CTS works again Fcntl works well, my mgetty
works I'm happy again.... ;-)

greets Ric

No, it won't help. The Atari doesn't have any problem with SCSI 2 drives. The
driver normally even won't recognize if you use a SCSI 1 or SCSI 2 drive.
SCSI 2 offers additional features but is compatible to all SCSI 1 features.

Hi Bertil, i believe thats what i wrote, (could be my bad english though).
But i'm using Hsmodem 5 here, and the MFP is doing just fine.
I didn't know that Hsmodem 6 was _the_ update. I remember Jan wrote something
about a special bug update in the N.Semper area, but perhaps he did mean
version 6 as well.

I am trying to modify the Linux/68k frame buffer device to support the Spectrum TC graphics card for the TT's VME slot. The generic driver can write to the card, but not set any palette entries. If anyone has any information about the registers in the card I would really like to here from you. Also if anyone knows whether Wilhelm Microelektronic is still around and how I can get ahold of them they might be able to give me this information.

Thanks,
Craig

: and if so what are they?

There are lots of different module formats. You'd not have much luck
trying to play a TCB format module on ProTracker and vica versa. There
is a Guide to Soundtrackers available from most good PDL's which contains
information on writing your own tunes and the different formats available.

From memory here is a list of module formats I know of :-

NoiseTracker
ProTracker
Octamed (can be 8 channel)
TCB Tracker (very non-standard)
Quartet (not essentially a module, but worth mentioning)
Digital Tracker format (Falcon standard, up to 32 channels)
Scream Tracker (S3M) - PC format, multi-channel
MultiTracker (MTM) - see above
FastTracker (can be 8 channel, maybe more)
669 format (I have no information on these, sorry)

Perhaps someone will add more to this...

Hello all,

This week I have finally installed MiNT v1.12. Some months ago I also tried MiNT, but I didn't see the sense of it (no Gem multitasking) and deleted it again. But now I see the beauty of it (especially with gemterm) I was wondering what else I should do. Do I need to create a Minix partition? What version of gcc do I need to install? What about MiNT-net? and MiNT-X? There's so much to download, I just can't see what to do to get a proper and effective system.

Thanks for helping me out,

Ivo

True, but running down a brand of computer in its own newsgroup is in very poor taste, IMHO. Not that you have done so _directly_, Bob, but the net effect is the same.

ALL of this should be taken to .advocacy. I'm _really_ tired of hearing all this PC pros-and-cons in this newsgroup and I'm sure many others feel the same way. Fact or fiction, this is NOT the right place for it.

Cease and desist, OK?

Yeh, get a newer Mac. :)

The Mac IIx is not '32-bit' clean and the Connectix utility or the free
32-bit Enabler from Apple (for Sys 7.1 or later) usually takes care of
that allowing the older Mac to address up to 128Mb of RAM and use more
modern 32-bit software. But evidently not for MagiCMac, eh? Have you
tried rebooting your system with all other extensions turned off?

>And you can't use it for nothing, can you ? It doesn't show a damn thing
>Hutch.

I SAID it's not concrete evidence; only an IDEA of the level of interest. Ten paid registrations out of say, 1,000 downloads would tell ME something as a shareware author... like, find another line of work. :)

>Garbage you say, why not just say it's crippleware insted.

That's just a question of semantics. 'A rose by any other name...' and all that rot. You seem to have lodged in your mind a very specific definition of 'shareware' as a fully-functional program. Eric and I tend to disagree.

>And excuse me, are you calling me a pirate Hutch ?

Where in any of my previous posts did I call you a pirate? All I said was:

>> it would seem that the only people that DO complain are those that
>> wouldn't pay the shareware fee anyway.

That's just IMHO but I stand by it as I can't imagine why any -honest- person would bitch about 'demoware' or 'crippleware' or whatever other term you want to call it. If you like what you see, then pay the shareware fee. If not, then don't. Simple.

No, I did not call you a pirate (you would know if I did). But your comments might lead one to believe that you share some of their views as well as their common overly-defensive attitude. If the shoe fits...

Let's not let this get sillier than it already is. Just understand that there are many forms of shareware and 'crippleware' is just one of them.

All this recent interest in the Gemulator made me recall that I have on my bookshelf a VHS video (NTSC) that demonstrates the use of Gemulator.

Not exactly a Hollywood production, but it does feature the author, Darek Michoka, putting the Gemulator through its paces. Might be worth your while if you are considering buying one of these.

If anyone wants it, just let me know and I'll mail it to ya and you can send me $5 later on to cover the cost of the tape and postage. Better restrict this to the US due to TV standards and shipping costs, though.

3616. Emagic Logic ?s

Newsgroup: comp.sys.atari.st
Date: 1995-03-03 19:00:32 UTC
From: nggilber@cca.rockwell.com
Message-ID: <D4vosx.J7z@lazrus.cca.rockwell.com>
Source record: 170323

I have just acuired an ST and Emagic Logic v 1.7 somthing.
I like it very much.

What is the latest version? I know this one isn't too old because
the manual is circa 1993.

I only have the tutorial manual and 1.6 addendum manual.
The tutorial manual speaks about a reference manual. I suppose
I'm missing this.

Can this program be upgraded? I am not the one who bought it
in the first place but I do have the Log3 dongle (if thats what it's
called). So it's not like someone just sold me an older version
when they upgraded.

Does Emagic have an american representitive?

Any help would be greatly apreciated.

Thanks,

Neal Gilbertson

The Toshiba XM-series has this feature of copying digital audio via the
SCSI-bus. The driver has to support his, of course.

It works great with CD-Tools from Julian Reschke. There is some freeware stuff
available for this purpose, too (but needs capable driver).

WRONG!!!!

TOS 3.05 (fitted to my TT) DEFINATLEY contains 68030 code. I have 'extracted'
parts of the ROM using Devpac TT to exmaine what is done by the OS, comparing
this code to the details given in the MC68000 Family Programmers Reference
Manual (supplied with Devpac TT) code contained in the ROM is 68020/68030
ONLY.

actually in the demo version of the docs. i used german assistant to
translate it over and unless they really botched up, the Heidlberg
Applications Systems or whoever makes MagiCmac is gonna do a PPC. Right
now it doesn't run under emulation on the PPC and at this moment i'm
finishing the translation on the help files to see what else i can glean.
it's just the demo version though. anyone know of a distributor in the US
for these people or an english version of the demo or who to purchase?
that's the whole reason i hopped on to this news group cause i miss my old
ST. I got a mac now but was with atari from the atari 400 w/membrane
keyboard till the 1040 ST. I'd really like to see how good this emulator
is. any help appreciated. email or post. email to artsci@aol.com.

thanks.

3622. File transfer ST1040<->PC

Newsgroup: comp.sys.atari.st
Date: 1995-03-03 22:30:13 UTC
From: Tom Dolbilin <tdolby@ncsa.uiuc.edu>
Message-ID: <3j859l$h4e@vixen.cso.uiuc.edu>
Source record: 170340

Ok, here's my problem. I have an ST1040 with no extra software
or hardware, except for Cubase 2.0 which originally came with it.

My primary computer is Windows PC (sorry folks :)

What I need is ability to transfer data between the two, either
with a cable or via floppynet. In other words, I currently don't
have any way to get data/programs into the Atari, unless they come
on an Atari-formatted disk.

I guess what I'm looking for is a PC (or Mac) program which will
read from and write to Atari disks. Any pointers?

Thanks,

Tom

3623. STuff Still 4 Sale!

Newsgroup: comp.sys.atari.st
Date: 1995-03-03 22:52:01 UTC

IT'S GOING FAST FOLKS! I have removed all sold items from this list.
Updated 3-3-95!
MOST ITEMS I WILL SHIP UPS C.O.D.

For Sale. MAKE OFFERS!!!!

HARD WARE

Atari Mega ST2 upgraded to 4 megs with Z-Ram upgrade
TOS 1.04 with PC Ditto II [PC hardware emulator] installed internally
SC1224 color monitor
SM124 mono monitor
Original boxes for computer and monitors
Monitor Master
[I will sell both monitors together for $150.00 and throw in the Monitor
Master switch box. As
with all other items, you pay shipping.]
PC Ditto II installed internally with above computer, or I can remove for
installation into your
own computer
Spectre GCR with roms and version 3.0 software
VideoKey [Allow audio/video connections to a t.v. monitor in low and
medium rez modes]
Discovery Cartridge [From Happy Computers. Excellent software backup
device and has many
other uses]
IB 5 1/4 inch drive
MFD 1080 drive [3 1/2 drive works, the 5 1/4 drive non-functional
and has been removed]

APPLICATIONS SOFTWARE

Multi-TOS [Multi-tasking on your ST compatible computer]
DC Desktop
DC Utilities
Hypercard Developers Kit [For Mac or Spectre GCR users]
WordPerfect ST [Last version developed by WordPerfect]
Wordflair II
Regent Word II
TV Title 2.0
PC-Ditto [PC software emulator, slow but very compatible. Good for
occasional or emergency
uses.]

GAME SOFTWARE

Purple Saturn Day
Impossible Mission 2
Championship Wrestling
Knight Orc
World Games
The Pawn
Guild of Thieves
Sinbad and the Throne of the Falcon
Rocket Ranger
The King of Chicago
Battle Chess
Midi Maze
Shufflepuck Cafe
Xenon 2 -- Megablast
Final Assault
Mean 18
Blackjack 3
Jinxter
Pac-Land
The Crimson Crown
Transylvania
Questprobe -- Spiderman
Superbike Challenge
Super Kidgrid
Thundercats

Plus the following compilation packages:

Precious Metal includes:
Arkanoid Revenge Of Doh, Captain Blood, Xenon, Super Hang-On

Triad includes:
Starglider, Defender of the Crown, Barbarian
Magnum 4 includes:
Batman, After Burner, Operation Wolf, Double Dragon

Microdeal Hot Disks Volume 1 includes:
Goldrunner, Jupiter Probe, Karate Kid II, Slaygon

The Story So Far Volume 1 includes:
Beyond The Ice Palace, Buggy Boy, Ikari Warriors, and
Battleships

Mega Pack includes:
Winter Olympiad 88, Mouse Trap, Plutos, Blood Fever, Seconds
Out, Frost Byte

5 Star includes:
Barbarian, Crazy Cars, Enduro Racer, Wizball, Rampage

Action ST includes:
Deflektor, Northstar, Trailblazer, 3D Galax, Masters of the
Universe

Giants Collection includes:
Out Run, Gauntlet II, 1943, Street Fighter

Premier Collection includes:
Exolon, Nebulus, Netherworld, Zynaps

ALL ORIGINALS!!! I am also the original owner and have taken good care of my equipment.

REMEMBER -- I WILL SHIP UPS C.O.D. CASHIERS CHECK OR MONEY ORDER ONLY. PURCHASER PAYS SHIPPING AND C.O.D. CHARGES.

3624. Help with Atari Disc Drive

TF> does not load any software. Has anybody experienced this problem
TF> and if so, can you please let me know if it's fixable or not. If not
TF> does anybody know an Atari Dealer in Colorado?

You most likely need to re-seat the socketed chips - that's the first thing to try when _anything_ gets wierd on the older ST machines. Then try a different floppy drive - if that doesn't do it, you may need a new sound chip (it also helps control the floppy).

I don't know about Colorado, but you can call Toad Computers in Maryland (1-410-544-6943) or Megabyte Computers in Hurst, TX (Sorry, don't have the number handy) about repairs. It might be simpler to get a newer computer, an STe for example.

Uh... The disks _are_ formatted, aren't they?

3625. MiNT troubles <sigh>>

Newsgroup: comp.sys.atari.st
Date: 1995-03-03 22:57:03 UTC
From: zonny@xs1.xs4all.nl
Message-ID: <3j86rv$aag@news.xs4all.nl>
Source record: 170343

Yoooo everybody!!!

I am TRULY sorry if there's a simple answer on this newsgroup somewheres, but I don't have the time to scan multiple hunderds of messages just for this. One day I'll download every posting and I'll have all the answers. 'till then:

I have some minor but very annoying troubles with MiNT.
I'm running MiNT on a 2.5 Mb STf, TOS 1.0, Megafile 30 and sm125 mono monitor. I set it up to start tcsh on bootup, and got all the links set up and env-vars, too.

Now I have this trouble. Everytime I backspace OVER another character, this capital K appears, no other characters get removed, but the are removed from the linebuffer. Also, I cannot see my cursor.
These troubles vanish when I use a non-vt100 (st52,et52) but I rather like vt100 when using man for example. These troubles started when I used the TERMCAP suplied with the INIT package from the MDK. Before I installed the init package, it worked fine. I now cannot find the other, old (?) termcap. Where is it? What is wrong with the new (?) one? Does Init NEED the new one? etc.

Also, SCREEN does not work properly. I can start it, but it doesn't allow me to run multiple screens. It just updates the current one. And if I type 'screen <shell>' or just 'screen' from within screen, it starts up a screen session ON TOP of the old one. What the ^&*%^&* am i doing wrong?

And last, but not least, here's a question that undoubtly has come up here a thousand times.

What happend to the /dev/fasttext from mint < .95 ????
I LOVED it! Bummer, its gone... Is there a replacement? Is there a way to use my Warp 9 screen accelator with mint? Not the normal way, Mint seems to think Warp 9 is mint, and gives 'Mint already installed' errors.
I would really like to run an accelator, I've been using warp too long...

Well, that's about it, I think, Thanx for reading (apearently you got this far...:))

cheers,
zonny@dds.nl zonny@xs4all.nl atarihelp@dds.nl Quantum-Mechanic in the MOO's!

Z>
Z> I don't know how much of this thread I have missed, but anyway, are we
Z> talking about something to enable a reasonably fast baud rate on
Z> Atari(s)?

Is 19.2k baud "reasonably" fast? If so, then the answer is yes.

Z> I found hsmoda05.lzh on micros.hensa.ac.uk under /micros/atari/tos/o/o191.
Z> Is this the same as HSMODEM but a previous version or is it something
Z> else?

HSMODEM is the generic name for HSMODAx, where "x" is replaced with the version number. HSMODA6 is the latest, I think. I found it at uni- erlangen.de or uni-paderborn.de, not sure which.

Z> Is there a more up to date version somewhere (that is accessable)?

See above.

Firstly, I apologize for the message length, and the fact that it doesn't really apply out of the UK. I *am* trying hard to reach as many UK Atari Users as possible, and this is the only time I'll post this, so please bear with me :-)

@@
@ The Great 1995 Ad.Lib Joke-athon! @
@@

@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@
Categories of Entry and Rules
@@@@@@@@@@@@@@@@@@@@@@@@@@@@@@

Welcome to the Ad.Lib Joke-athon!

We *need* your funnies, your jokes, your witticisms and your anecdotes.

We also need your hard-earned cash, your lucre, your readies and your wad.

The whole idea is to make as much money as possible for *Comic Relief* and to have as much fun as possible whilst doing it.

All entries must be accompanied by a _*minimum*_ of #1, but the more, the merrier for those in need. There are a whole host of prizes for the winners in each category, and very possibly a prize for each and every entrant.

Here's what you do:
==========

Send your cheque or postal order made payable to *"Comic Relief"* to

The Ad.Lib Joke-athon,
22 Alexandra Street,
Pelton Lane Ends,
Couny Durham
DH2 1NT

Send your comical entry to us by one of the following means:

Paper (Boo! Kill less trees!)

Disk - Sorry, not returnable unless you win, then you can have it back I suppose:-)

Email - Internet peeps among you can submit entries to:
jokathon@tachyon.demon.co.uk
acurtis@theshack.demon.co.uk

Direct Email - Logon to the Ad.Lib BBS and send private Email to Andy Curtis or Frank Charlton. Use 'E' from the main menu.

Mark your entry *CLEARLY* as to which category you wish to enter. If you can't think of an entry, just send us the money for *COMIC RELIEF*, that's what it is all about.

The Categories
==============

(1) Jokes

Just plain simple ordinary jokes. Not more than 300 words. If it makes us laugh more than the others then you will win!

(2) Humourous Prose

This can include: Confessions, Personal Disasters, Funny Events and anything else that's funny and can be written inside 1000 words.

(3) Poetry

Send us your poetic masterpieces! Limericks, poetic tales and any amusing verse that's likely to...erm...amuse us.

(4) Cartoons

The artistic amongst you, feel free to cartoon away! Entries can be as image files only, either in ST-High resolution (640x400x2 colours) or 320x200xAs many colours as you like! Odd formats such as Spectrum 512 are fine - see the Rules Section. Pictures MUST be on disk or via Email - printouts can be included, but we need the Image! Feel free to divide the screen or do a single screen cartoon.

REMEMBER
========

IF IT'S FUNNY, THEN YOU WILL WIN SOMETHING!

Restrictions
============

A _*minimum*_ of #1 per entry. Feel free to enter more than one category and /send us MORE MONEY FOR COMIC RELIEF!!!/

YOU MUST (Yes, the dreaded 'Rules' bit!) :
==

Enjoy yourself - otherwise you will be disqualified :-)

For the 'Cartoons' category, any image format you can throw at us is acceptable. Compressed formats like GIF are better (Oi! UniSys! Leave us alone - it's for charity!), but any other ST, PC or Mac format can be fiddled with by us. Missus.

For standard text categories: If sending a specific word-processor format instead of ASCII, please stick to the following recognised types:

Papyrus Gold, AtariWorks, That's Write 3, Protext 4/5/6, Marcel and 1stWord/1stWord +/Word Writer ST. Generic ASCII or RTF files are good, too.

Entries which include Sausages may stand a higher chance of winning :-)

And finally....
==========

Let's all pull together and make as much as we can for Comic Relief. It's a truly worthy cause and the money is not wasted on needless beaurocracy. If you insist on being a skinflint, remember that many companies have donated valuable prizes and you stand an excellent chance of winning your money back - or MORE!

And Finally 2 : The Sequel!
==========

Hmmm... I suppose you want to know what you can win, eh? OK, as of 22:48 on Friday 3rd March, the fantastic prize list looks like this...

JCA Europe Ltd :
2 x Stereo CAD @ #30 each
1 x 16-disk Calamus font set @ #99 per set.
20 x Free PD Disks from the Riverdene catalogue.
Compo Software :
1 x That's Write 3 @ #150.
1 x Studio Photo @ #60.
.net Magazine :
One year's subscription worth #35.00.
ST Format Magazine :
One year's subscription worth #35.00.
5 x Quartet Sample Sequencer @ #45.00 each.
5 x Civilization by MicroProse @ #35.00 each.
16/32 Systems:
3 x RayStart raytracer @ #50 each.
3 x DGraph Graphing Package @ #40 each.
Joe Connor, CiX Shareware Support Scheme:
A fully registered shareware app of the user's choice.
FaST Club:
1 x ImageCopy 3.5CD @ #35.
3 x ImageCopy 2 @#??.
HiSoft:
1 x Papyrus Gold @ #130.
1 x Twist 2 Database @ #85.
1 x VideoMaster Falcon Video Digitiser @ #99.
Gasteiner:
500 Tickets for their show in London, June.
Andre Willey, CiX User:
Fully registered copy of CiXComm worth #20. I'm working on a freebie CiX account too, but no promises :-)
Ofir Gal, Atari Journalist:

5 Fully registered copies of GEMBench, Ofir's excellent
benchamarking utility.

Quite a few companies and individuals haven't responded yet, but we'll
hound them 'til they do, so more prizes may well be on the way!

Right... *GO FOR IT!!*

RS>
RS> Don't you keep back ups, I keep at least 2 copies of major software....

And we all know how perfect you are, don't we, Roger?]:^)

It stands to reason if the poor sap has and ICD clock, he has an ICD host adapter, and is therefor entitled to the software. Granted, it's not PD, but we also know that ICD is not going to prosecute for one copy of the clock-setter program. If they did, they'd be laughed out of court.

Roger, I'm a software developer myself. I know how important it is to fight piracy. I also know that there's a big difference between a pirate, and a guy who rather dimly formatted his master disk. If you tell me you've never done anything that dumb, I'll have to repost the last 500k of "please help me" articles from you...

I'm sending him the program.

Try the Tempus 2.2 Demo that is on most German sites, I found that it works
with the Overscan Mod......

>although minorly limited.

I think you will find that this is GSZRZ19, thier is a later version
call GSZRZ228 and if you pay 30DM you can get the latest GSZRZ53,
this is still being supported and is the ONLY ZMODEM that Atari people should
use...

The DEMO of GSZRZ53 is on most good German sites....

HM> >Thats what i need my high DTE rate for. I should be having my ISDN modem in
HM>
HM> You mean terminaladaptor? Which one did you buy?

Nope, i did mean a modem 8-) I've ordered the new Zyxel modem, which is
capable of doing ISDN 2x64kbit (channel bundling if you like). Just waiting
for the damn bastard, (should have been here in december).

HM>
HM> >a few weeks now. Although i may have a small problem running bundle
HM> >channel 2x64Kbit.
HM>
HM> Why would that be? Anyway, it'll double your cost as well.

I tested my Falcon running 115.000 DTE, (using V.FAST modems), transfering
a straight ascii file. I reached about 9000 cps, (when receiving) and then
i got alot of crc-errors. Sending the same file gave me an avarage around
11400 cps.
I have yet to find out why my Falcon behaved like it did. It should be able
to handle 115000 fine, both ways.

HM>
HM> >Btw, i've just been informed that Hsmodem v.6 can go up to 230.000 on the
HM> >serial port. This is what i need for my ISDN.
HM>
HM> Does the terminaladaptor support that? I only now of ones doing 115k2, which
HM> is way fast enough for compressed files anyway.
HM>

A good terminal adaptor support around 900.000 baud on the serial port, or
many of them can use a parallel port insted.
The one you're talking about (115k) is enough when not using channel bundling
as you'll probably not reach above 7500 cps with compressed files, but non-
compressed files can go alot higher you know.
And i know i'll pay doubble for channelbundling, Thats the whole idea 8-)

>
>I SAID it's not concrete evidence; only an IDEA of the level of interest.
>Ten paid registrations out of say, 1,000 downloads would tell ME something
>as a shareware author... like, find another line of work. :)

Come on Hutch. I could easily dump an 'stupid' utility to the market, and
it'll probably be downloaded alot of times, but that gives me no rigth to
start accusing or even mentioning a thing as piracy. It's not fair to those
who have downloaded the stuff only to find out it wasn't the program they
were looking for.

>That's just a question of semantics. 'A rose by any other name...' and all
>that rot. You seem to have lodged in your mind a very specific definition
>of 'shareware' as a fully-functional program. Eric and I tend to disagree.

There is and there has always been a specific definition for shareware.

>
>>And excuse me, are you calling me a pirate Hutch ?
>
>Where in any of my previous posts did I call you a pirate? All I said was:
>
>>> it would seem that the only people that DO complain are those that
>>> wouldn't pay the shareware fee anyway.

Thats not really all you'd say, as i recall a word as piracy, which you used.
But i'm not here to remember for you.

>
>That's just IMHO but I stand by it as I can't imagine why any -honest-
>person would bitch about 'demoware' or 'crippleware' or whatever other
>term you want to call it. If you like what you see, then pay the shareware
>fee. If not, then don't. Simple.

Yep, but some people may not have an interest in a program which is annouced
as shareware but when they have used time and money on getting the program
they find out they can't test it fully because of a few limits, which in
some cases can seem rather pointless.
And i don't understand why it's so difficult for an author to name his
program crippleware if it contains limits.

>
>No, I did not call you a pirate (you would know if I did). But your

>comments might lead one to believe that you share some of their views as
>well as their common overly-defensive attitude. If the shoe fits...

Is it a pirate comments to ask for such a thing Hutch ? In that case you
have never seen or heard a pirate. A true pirate wouldn't care at all, as
he'll be doing whatever he wants to, no matter if it's cripple shareware
or commercial software we're talking about. One thing for sure, he would
never ask about anything!.

>
>Let's not let this get sillier than it already is. Just understand that
>there are many forms of shareware and 'crippleware' is just one of them.
>

I can probably live with it, but don't ask me to understand.

Source record: 170204

>ALL of this should be taken to .advocacy.

That's exactly right... I'm not completely sure how this got started here, but it's long past being useful at all.

The only problem I have with the "take it to advocacy" idea is that the general feeling seems to be that it's OK to bash anything BUT Atari here. The slightest suggestion that PC/Mac/Amiga/whatever haters might possibly be wrong in their exagerations and misinformation usually results in the "take it to advocacy" messages...

I don't recall anything in the comp.sys.atari.st charter that says this is a place to talk about how bad the PC (or Mac, or...) is, either.

3638. CD-ROMs for Atari computers

Newsgroup: comp.sys.atari.st
Date: 1995-03-04 02:02:31 UTC
From: BobR <76702.1466@CompuServe.COM>
Message-ID: <3j8hnn$91f$1@mhade.production.compuserve.com>
Source record: 170206

With all the discussion of CD-ROMs for Atari computers, I thought everyone might be interested in seeing a list of CD-ROM discs applicable to Atari which was compiled by Greg Kopchak of "It's All Relative", from the CompuServe Atari Computing Forum library.

While it's true there aren't very many 100% *Atari specific* CD-ROM discs available, Greg's list of discs which are of value to, and accessible by, Atari computers and applications now numbers over *850* CD-ROM discs.

Unfortunately the list is over 11K ZIPped, over 52K in ASCII, so it's a bit large to be posting here.

I don't know if the list is available on ftp sites or not, but if there's enough interest to warrant the posting, I could post a UUencoded file here.

(I could probably e-mail the file too, as long as the demand isn't too heavy...)

Hi all,
I'm a total novice in Atariland. Here's my question: Is there a
program which is good at recovering data from Atari ST disks? I have a disk
with files which were either accidentally deleted or partly corrupted.

Dwight

One of the poor losers (abstract@wam.umd.edu) wrote:
: I have a 1040STfm. With the ICD AdSCSI or Link, can I use any
: standard SCSI hard drive? Or are there restrictions? Oh, and
: will they be compatible when I upgrade to Falcon? Thanks in advance!

Make sure the they will handle SCSI 2 hard drives. My ancient Supra DMA
to SCSI adaptor just wont see any SCSI 2 device. All the new SCSI drives
being made now are SCSI 2. I think an ICD adaptor will be fine.

There are only 2 other things to do.
1. Set the SCSI device number with the tiny jumpers (Links) on the
circuit board.
2. Disable parity by removing the PO or EP jumper. (PO=parity option,
EP= enable parity. One or the other or something similar).

Hope this helps.
Regards, Julian.

3651. HELP with Atari newbie Q.s! (please?)

Newsgroup: comp.sys.atari.st
Date: 1995-03-04 10:14:45 UTC
From: fishers@yvax.byu.edu
Message-ID: <1995Mar4.031445@yvax.byu.edu>
Source record: 170224

Hi,

I'm almost completely clueless about the atari ST series of computers. All l really know is that they come with built-in midi ports (which is the reason I'm considering an atari). I'm a musician who works with keyboards and does quite a lot of synthesizer sequencing. I'm a college student and am on a tight budget.
Anyway, this is the story: I currently own a 286 laptop computer (with two floppies, no hard drive, and only 640k memory). Most of the midi sequencing programs I've seen for the IBM require more than the standard 640k. Furthermore, I can't install internal sound or midi cards because the computer is a laptop. The only solution I can see is to buy an external midi thingy (around $100 as far as I can tell) and extra memory (who knows how many $). I thought that perhaps buying an atari would be cheaper than trying to get all the midi stuff going with my computer. What hardware/software would I need to get an atari up and running as a good midi sequencer? Would a 520 ST alone be sufficient for my needs (I can pick up a 520ST with monitor for $50 here)? Please help me out by explaining whatever would be helpful for me to know. I have no clue about ataris. All I know is that I'd have to sink a lot of money into my 286 to get it anywhere near being able to do competent midi sequencing. Thanks for the help with an obvious (to all you atari-knowledgable people) question.

Me too. I recently discovered that the library in my CS department at uni'
has a huge stack of old ST World mags. I have spent nearly every spare
minute of my time reading through them, wishing that another mag would come
out with as dangerously high an enthusiasm for the machine. I guess it may
be hard because the market has since shrunk and there is less to be
enthusiastic about (new products etc.) but hey, it must surely beat STF !!

|>
|> Iain

It seems to me like Future is doing 'formula' magazines, which unfortunately do not suit the Atari market. Just why does STF feel the need to boast that they're the best selling, reassure readers that they'll be around for years to come (they've done this often) and print stupid tacky statements like "Seven stupendous ST programs" bolstered by a cheap looking back cover that simply repeats what's on the disk ? It's almost embarrassing to pick it up in the shops. I'd rather they print a photo of an Atari machine in an interesting pose than that, and what's this, another new editor who probably doesn't even use an ST. It shows in their writing, and this is what I mean about formula magazines... interchanging staff and all that. Who was the last STF editor that actually owned and used Atari computers regularly like Vic Lennard ?

It's pretty clear what the STF lot had in mind when buying out STR to close it down, "ST User readers look inside now" was soon followed by "ST Review readers look inside now". How cheap. How stupid. They are obviously blind to the fact that the loyal STR following would not buy a mag at all than buy STF. I used to buy all three major ST magazines, to give my machine the best support I could because I enjoy using it a lot. I feel extremely bitter towards STF and their bosses for depriving me of that extra support. I don't know - the market may be smaller now but somewhere along the line STF screwed up. I used to look forward to it eagerly every month and buy it with pride. I think they started losing it exponentially after issue 35 (remember that one ? A huge 178 page two disk beauty packed with wonderfulness and good sensible design, with a detailed feature on the ST BOOK. Sigh).

Well, they appeared to have realized their blunder and improved recently, but it's too little and too late.

S.Lai

P.S. Hey, Iain... didn't I guess it would have ATARI in the title ?! :)

P.P.S. Can someone answer me: is Vic now _not_ working for MacWorld like he said, because it's been said many times that he'll be editing the new mag ?

3659. Re: crippleware - how crippled?

Newsgroup: comp.sys.atari.st
Date: 1995-03-04 12:42:27 UTC
From: diehl@grin.io.org
Message-ID: <3j9n7j$t7r@ionews.io.org>
Source record: 170119

: >

: I have nothing against crippling at all, but calling such a program shareware
: is just something i have a problem with. Shareware and crippleware is not
: the same, but you guy's want it to be. And when you can't get away with
: that, you start shouting piracy, (like Hutch did). That is not playing

The original concept of Shareware was that authors gave out their program,
and if people wanted to and liked the program, they send the author money.
If they did not like it, they deleted it and paid nothing.

The need to cripple shareware programs as an incentive to register did not
come until it was generally realized that many, many people were taking
advantage of the shareware ethic, by themselves being unethical and using
the program without registering. So Shareware programs began experiencing
crippling as an incentive to register the program. "Crippleware" was just a
nickname, and a generally derogatory one at that, used by people who had a
passing contempt for this practise. It is not an officially recognised form
of distribution; the Shareware ethic still holds, even with programs which
are crippled. The principle is the same: You get the program, and if you
like it, you pay for it, and recieve the added bonus of getting more (or
uncrippled) features. Had nobody taken advantage of the idealist's
Shareware ethic, there would have been no need of crippling... but this is
not an ideal world, and there are a lot of unethical people out there. It
is still Shareware, regardless of the functionality of the program. (Unless
the program does nothing, or very little, of what is described in the
documentation, then it is a preview or demo)

: fair, as it'll leave no alternatives to the users.

: You can do with your program whatever you want, but if you make somekind of
: limits it's no longer shareware, and therefore shouldn't be named shareware.

: Thats really all i'm saying.

: One thing though. I really would like to know why you insist on calling it
: shareware when it's crippleware. Whats the reason ? (Perhaps Hutch should
: answer this).

Because Crippleware is not an officially recognised deffinition. People
know what Shareware is. People are not so knowledgable as to what
Crippleware, or whatever-ware is. And in any event, what difference does it
make what it is called or how it is classed? You are splitting hairs over
an issue which does nothing to answer the questions of the original poster,
nor does it affect one way or another how the program functions. A program
with disabled features is a program with disabled features whether you call
it Shareware, Crippleware or Postcardware. To-MAY-to, To-MAH-to.

: normal GIF file?

JPG is a fast-fourrier, lossy compression scheme, but it does not
necessarily mean that it is a GIF; Targas, TIFFs, all picture formats can be
compressed with JPEG. A program such as the JPEG Conversion CPX will be
able to convert your JPEGs to Targas or GIFs quite easily ... and it works
pretty well, too. You could also try JPEG5BIN.

: : Do most .MOD music files carry the same standard? For instance
: : can one use the likes of ST Protracker or ST TCB tracker to play say Amiga
: : music MODS, or are there slight modifications needed for compatiblity
: : and if so what are they?

: There are lots of different module formats. You'd not have much luck
: trying to play a TCB format module on ProTracker and vica versa. There
: is a Guide to Soundtrackers available from most good PDL's which contains
: information on writing your own tunes and the different formats available.

: From memory here is a list of module formats I know of :-

: NoiseTracker
: ProTracker
: Octamed (can be 8 channel)
: TCB Tracker (very non-standard)
: Quartet (not essentially a module, but worth mentioning)
: Digital Tracker format (Falcon standard, up to 32 channels)
: Scream Tracker (S3M) - PC format, multi-channel
: MultiTracker (MTM) - see above
: FastTracker (can be 8 channel, maybe more)
: 669 format (I have no information on these, sorry)

There is also .FAR (Farandol) a little-used PC format. OctaMED (and any MED
music files) are exclusive to Amiga. There are also at least 3 different
versions of the MOD standard where the authors didn't deign to differentiate
them by use of a different extension. (Very irritating, IMHO) PC
FastTracker I believe can be up to 8 channels and is one such program that
uses the extension .MOD.

: Perhaps someone will add more to this...

3662. Re: Help - MS-DOS formatting on ST/e

Newsgroup: comp.sys.atari.st
Date: 1995-03-04 13:09:19 UTC
From: Eric.Noss@Microserve.com
Message-ID: <95030447359@microserve.com>
Source record: 170157

Doug Finch has asked if he can use DOS floppys formated on ST's on a 486.
He uses a STfm with TOS 1.0 and a Mega STe with TOS 2.05 and formates with
IBMFMT.TOS.

You can just format disks from the desktop from your Mega STe, all TOS's
after 1.04(Rainbow TOS) can format in MS-DOS. Or you can get a formater that
formats disks in 80 tracks and 9 sectors. I recommend M-Disk for this because
it's the best accessory for the ST and it formats in DOS so it reads well.
I used disks formated by M-Disk on PC's at my school and have no problems so
far. If you want to convert your old ST floppys to be used on a PC, you
want WriteBoot for Windows. It rewrites the boot sector to be MS-DOS
compatible. Rising Star Computers sells it for $19.95. The number is
1-513-254-3160; the address is 2901 Kenmore Ave. Dayton, OH 45420.

I hope this has been useful. I often swap floppys between Atari's and
486's. I only wish I can read HD disks on my ST without transfer to DD disks
using Windoze :(

```

AFAIK, it dosn't even exist on ATARI. If you want to keep all your text
formatting etc., then a WP like Calligrapher can save the text in RTF
format which can be exported to any of the mac, windows WP's.

I've got the compiled binary from aaue, and it's sort of working but I've had a few problems with it.

a) When reading a .el file it says `End of file when parsing' or something. Is it meant to?

b) Cursor keys don't work. I know they aren't supposed to and I know I can get them to by running xkey. But I can't find xkey anywhere!

c) Sometimes it says `Garbage collecting...' and then gives a bus error.

The problems with all emulators(except for Speccy ones) is that none of them can ever play any games. Neither Gemulator or Janus can do this well; though you may be able to play some mono games using Janus's local mode but it's specuation at this point for me.

If you want to keep playing ST games, then keep your ST. Ghostlink is good for storing stuff on a PC while using it on an ST. But at this point, you can't run programs straight of the DOS drive. I thought of using a RAMdisk and Divert to copy the game program in memory, run it, and read the data files from the 486 machine. I'm considering all of this because I'll need to use a DOS machine, but use the ST for learning to develop games.

Let me know about any alternitive methods...if any.

: You'll be tearing your hair out unless you've got an FPU, though.

Has anyone ever written a Raytracer using fixed point arithmetic? (Like FractInt uses fixed point for fractals.)
I would expect it to be faster than floating point - even with an FPU - unless 68882s are particularly fast compared to 68030s. Fixed point on a DSP would leave a 68882 standing.

Karl Wilkinson.

3668. No. ST's Really Are Crap!

Good afternoon everyone.
I am Samuel Tramiel of the Atari Corporation. For many years I took great pleasure in flogging crap equipment to the morons on this very USENET Group. Do you know that the ST was originally designed as a replacement for the MINI. However the engine was too big to fit in the casing, So an engineer called BOB said and I quote 'Hang on Sam, why don't we sell this as a next generation machine to stupid people the world over'.
I fine idea I think you will agree.
And so it came to pass that the ST was unleashed into the general populas.
And you, yes you bought it.
And you bought the Lynx.
And you bought the STE.
And you bought the Falcon.
Go for the esteemed 'CRAP SET' Jaguars are only 200 quid, I say go for it.

BTW, I myself own a Pentium P.C. and use the very first ST of the production line to wipe my bottom with after a visit to the little boys room. Boy those grills really are abrasive and do the job with a consumate ease.

Thank you for your time in reading this.

3669. worthless ST owner needs help

Back in 1986 (I guess) I bought my 1040ST. I have never upgraded it
nor did I ever bother to find out how it works. For this I apologize
to the ST purists.
I bought WordWriter v1.0 and have used it ever since to compose papers
for school, etc. I also played soe Infocom games and others (has
anyone ever copmpleted Fahrenheit 451?).
Now Questions:
Should I try to get a later version of WordWriter which includes fonts
(if there is a later version) because I would like a better word
processor?
Is there another compatible program I could get?
A I wise to save my iportant docs in ASCII?

Any advice would be helpful. cheers

Toad Computers will be carrying MagicMac when it is released in English
(perhaps 2-3 weeks away). Keep an eye on our web page for more info,
or send us mail at toad@charm.net.

Hi Jens,

a prototype of the Medusa T60 was presented at the proTOS computer show in Bonn-Hennef (November 1994). The intention is to produce the machine as a 66 MHz version but there are only 50MHz Motorola 68060s available yet.

If you format your disks on the PC then the ST will be able to read and
write to them.

Alternatively you could get PCSlave which uses the serial port and modem or
null modem cable to transmit data. PC runs as slave. I've used this very
successfully over the last week since I've installed it.

Hope this helps.

It's odd, I have the SSam 1.08B and it gives two bombs everytime I try to
read in CAF AIFF's (mainly non-compressed/mono). Zero-X demo reads
everything just fine. Is there a newer version of SSam available for a try?
Have you actually tried this AIFF-read/write with CAf 2.x files?

If you did the formatting by using HDX, you are forced to
reboot after making partitions. After that:

Try "Install Devices" in the desktop menu. That's the way to mount
new partitions. If you have the SHDRIVER.SYS ("Make Autoboot" in
most of the driver installation softwares) in the first Partition of
the IDE-drive, you don't need to install one into the SCSI.
If you have only SCSI, the install the Boot Driver to the first
partition of the SCSI.

Booting from a floppy is not the way to go.

The desktop might have any number of HDD icons, even they are not
available. "Install Devices" -command bring the partitions to
the desktop. Save the Desktop after you've got them there.
This command is handy when you put you friends SCSI drive in the end
of you SCSI-chain, and want to see/use his partitions.

>than have registered.

Well Eric, since you'd mention Fansi yourself, i would like to say i have
downloaded Fansi as well, tested it and found no future use for it. I'm
a Sysop as well, i also got the Crawly Crypt Collection.
With these info, and your point of view, i'm now showing as a simple
pirate who will not pay the fee. And the only reason is, you're missing
registrations, (read money).

When you start accusing people like you do using your thoughts, i feel
you think i'm one of those as well, and to me thats not fair.

I'm not saying there isn't any people out there using your program without
registration, but isn't that just what you're limits in Fansi should cover ?

>You're splitting hairs. The terminology isn't as important as the results.
>

What results ? There isn't any results, only thoughts. You base all your
accusations on thoughts, and in my opinion you should concentrate only
on those you know for sure are doing something wrong.

: >wrong here? The sound on my monitor (SC1224) does not work anymore,
: >so using the ports is the only way for me to get sound. Help!
:
: Evidently, when your monitor's sound blew it screwed up internally and
: is now routing some noise back through the the sound in-put line. This
: makes alot of sense. If the amp blew in the monitor the ... hmm .. I'm
: no EE so I don't know the technical term, but its kind alike a feedback
: line that controls gain, anyway, that would feed right back into your
: computer and likely into the RCA lines. Or perhaps its just a bias problem.
:
: In any case, the monitor =IS= the cause. Just cut the sound line from the
: cable to the monitor internals.
:
:
I'm not sure that you are right. I get the same problem when running a TV as
colour via RF. I use a separate amp to carry sound for the mono (soundless),
but the hum comes up when I go colour. It sounds like mains hum, so I
suspect (though I haven't yet checked) an earth loop created via the RCA
sockets and the monitor jack. If I'm right it will just mean disconnecting
the cable shielding at one end - if I remember my earth loops correctly.
Try disconnecting the earth (shield) line in the monitor lead at ONE end
only (else youll lose the shielding and earth protection) and it should
break the loop.

:
: At this point when I run the HINSTALL.PRG, and do an install,
: I see no drives highlighted as being available for mounting.
: All I see is a matrix of drives, up to about H:, which are all
: in "Half-tone" sort of signifying they aren't available for mounting.
:
: I am ignored when I click on them.
:
: I can quit the program and go back normally to the desktop.
: But there's no hard drive installed.
:
: There's no cherry bombs or anything. Just no available drive.
:
: Any ideas??
:
:
I suppose it is a stupid question, but is the drive formatted? Is the SCSI
id jumper/switch set correctly? Are you using a SCSI or IDE drive. Is the

software set correctly for it? Is the hardware compatible?

I'm not familiar with the Falcon setup, so I can't really help, but if
no-one else comes up with anything, at least you know I was willing to try
:-)
In actuality, it is frequently the obvious which gets overlooked, which is
why I posed the "stupid" questions. Anything more technical will have to
wait for the more qualified.

best of luck

:
: --Lunatic
:
:
Yes, no, and maybe. It depends on which version of TOS you have and how big
the drive is. Early TOS could only access limited sizes and numbers of
partitions, later versions are almost limitless. Can't promise about Falcon
compatibility, but I believe it should be ok.
Incidentally it would be a good idea to install FOLDRXXX.PRG or similar if
you have an early TOS (<1.04) to avoid the 40-folder bug; unless of course
you already have:-)

>
> --Lunatic
>

AFAIK, any SCSI drive that allows you disable parity will work,
including tape drives, with either of those.
CD ROM drives need the Link. When you upgrade to a falcon, you simply
sell off the adapter to some poor ol' ST owner. Everything should be
compatible.

Message-ID: <3jb320$j7a@elaine35.Stanford.EDU>
Source record: 170027

I am getting really annoyed with the delete-line "feature" in Atari-Works that clears a whole line if you push shift and backspace (or something like that). Did a newer version every come out that let you be able to change this somehow? It is really starting to piss me out and make me not want to use an otherwise perfect program (to me).

Another feature I need is a word-count. Is there any cheap little program that will check a STW file by any chance?
Thanx
;-)

3688. ST vs. Amiga

Newsgroup: comp.sys.atari.st
Date: 1995-03-05 01:42:18 UTC
From: James Wood <jamesw@PEAK.ORG>
Message-ID: <Pine.SUN.3.91.950304172350.14636B-100000@PEAK.ORG>
Source record: 170030

Heh heh. I certainly do NOT want to start a flame war. I guess you've all seen that subject enough over the LAST TEN YEARS. However, now that it seems both Atari and Amiga are out of the computer scene, I am curious to take a last look at these two in perspective.

I have *NOT* been following the Amiga line at all. Last I remember, they started with the model 1000 (68000 at 7.18Mhz). This machine had graphics modes a little better than the ST:

```
ST AMIGA
-- -----

320 x 200 16 colors 32 colors
640 x 200 4 colors 16 colors (????)
640 x 400 monochrome interlace! (how many colors?)

Sound: 3-voice mono 4-voice stereo
```

As I recall, the Amiga had 320 x 400 mode (interlaced) too. Who'd want to use that resolution? The interlacing that I have seen (on a Commodore 1084S) as **SO BAD** that I couldn't stand it. I'd trade it for a 640x400 monochrome any day....esp when MAC emulation time comes. However, didn't the Amiga have BOTH "sprites" (player-missile graphics like the 8-bit Atari) and a blitter?

Then came the model 500 (which was essentially like the 1040ST in shape/configuration), and the model 2000. These were the same processors and graphics modes as the original Amiga.

Then came the Mega ST. Do these all have blitters?

Of course, then came the STe, with 4096 colors. Did all STe's have blitters. Remember how it was possible to bring all 512 colors to the screen at once with programs like Spectrum 512? The Amiga had "hold and modify" mode (HAM) which could bring all 4096 up. I don't think the Amiga (nor ST) could animate in these modes, however. But could the STe bring all 4096 color to the screen simultaneously, like Spectrum 512 did the 512 colors on the original ST?

What increased sound capabilites does the STe have? It's stereo, right? Are there more voices or what? If there's only 3 voices then what - are there two on one side and one on the other?

Then came the Amiga 3000. I don't know what the hardware is in here, or what the increased graphics/sound might be. Was this a 68020? At what speed?

I suppose the Mega STe fit in here somewhere. But it was "only" a 68000, right?

Then came the Amiga 4000. Same deal...what about this?

Of course, then came the TT, which probably helped even the odds a little. Was this as good as what Amiga had to offer?

Finally comes the Falcon. (I can't wait to get my hands on one of these!) Then I see (towards the end of the Commodore regime) an Amiga 1200, which looks to me like a Falcon-wanna-be. Was it?

I would *REALLY* love to read some FAQs about the TT, Falcon, and heck...even the ST, STe, and Mega STe. Can someone provide me with the FTP site? I've looked all over, but I can't seem to find these. Perhaps I'm not looking in the proper directory on the local mirror of the Umich archive. Maybe I'm blind!!

James

3689. Need help w/hard drive

It was none other than One of the poor losers who did write on 2 Mar 95 that
....
Ootpl> I have a 1040STfm. With the ICD AdSCSI or Link, can I use any
Ootpl> standard SCSI hard drive? Or are there restrictions? Oh, and

basically yes ..but like all things there are always exceptions and some
have problems with some drives yet others are okay with them (Common complaint
:Parity).

Most reputable dealers will be prepared to take the Drive back off you if it
won't work so find a good local place aand you'll be okay.

Ootpl> will they be compatible when I upgrade to Falcon? Thanks in
Ootpl> advance!

Sure ,Falcon is easy (no link/adapter required) ,so best off with the Link2
which has the same 50W centronics (I think) connection at the drive end and
then you can swap between the ST and Falcon. Also be sure to get a fast drive
so the Falcon can get the benefits.

>
> Has anybody actually received a copy of this book?
> Does it really exist?
> Or have I been duped?
> I _hate_ being conned, please say it isn't so.

In order: Yes, yes, no, no.

There have been some big problems at the Printer/binder AIUI and a delay in supply for the second batch. The last I heard, fresh supplies would be due in 10-14 days.

I haven't received mine either yet, but I've contacted Mark and he's explained the situation to my satisfaction.

Weren't you happy with his response or didn't you bother mailing him before posting this? Let me guess...

btw. The reason there are so many people on CIX who've bought the thing is that Mark has been putting us right with quotes from his book for months now and he's demonstrated its value over and over again. I'm not expecting to be disappointed. Just be a little more patient.

> shareware. Shareware is a fully working program without any limits,
> were you just trust the users that they'll register. Crippleware got
> limits.

That's an interesting view on things Kim, but it's not one that has any truth in it.

The way I remember it, Shareware was created as an alternative method of <distribution> of software that didn't warrant the packaging or marketing of a full commercial product and ensured that the programmer himself got more of the benefits of sales rather than getting swallowed up by the men in suits or general overheads.

If the author chooses to restrict the version that he distributes in order to both protect himself from unregistered users exploiting his trust and to encourage registrations, then that's his prerogative. It still remains shareware but may get categorised in a particular form that you could call crippleware.

They're not mutually exclusive. Crippleware is Shareware that you can evaluate but can't rip off. Damned inconvenient isn't it. B^{|

Also, having now seen your later posts, I'm not sure that it matters what name is given to the thing. It still is what it is.

That's a fair point, Carl. That's why I like Ruftrade. It doesn't give you umpteen different choices for every other word, just one which has been selcted by the author as being the most likely after going through numerous German textfiles. It also makes some allowance for the structure of German sentences.

There's no possibility of updating the dictionary though, but the author is constantly updating it so the registered version will be as up to date as possible - it only costs 5ukp.

Try looking for it at Hensa - I think Danny was impressed with it as well.

Falcon030 computer for sale:

4MB RAM
82MB internal IDE hard drive
mouse
Intel 14400bps external fax/modem

DEKA 2 PC keyboard interface w/ PC keyboard

Includes the following software:
Outside (virtual memory up to 512MB)
Lattice C 5.6
HiSoft BASIC 2.1
STraight Fax 2.1
ExtenDOS Pro
NVDI 2.5 & 3.01
Geneva
Neodesk 4
ST Format magazines w/ disks
ICD SCSI Pro Utilities
PhotoShow Pro 2.2
GFA Basic 3.5e

Games:
Virus by Rainbird
Dungeon Master
Frontier: Elite 2
Flight Simulator 2
Karateka
Ishar (Falcon version)

Selling for $725 including shipping within the continental US only (not Alaska). Please respond via e-mail as soon as possible as I want to have this sold by 3/12.

3698. Re: ST vs. Amiga

Newsgroup: comp.sys.atari.st

Source record: 170179

The sound on the 1040STe was exactly the same as the earlier models (3 voices from a Yamaha sound chip into one monaural output), with the addition of two channels of DMA sound.

The DMA sound allowed playing of "samples", that is, digititized audio, not sound generated in a synthesizer chip, through two outputs for true stereo.

Thus games and such which still used the Yamaha chip played in mono, anything which used the DMA sound could be in stereo.

The sound capabilities of the 1040STe still lagged FAR behind even the Amiga 1000 with its sound coprocessor chip and true stereo output for ALL sound.

Source record: 170182

Essentially ALL Atari ST models were identical functionally, with a few minor incremental improvements from model to model, with the exception of the LAST model, the Mega STe.

The first ST, the 520ST was the one with external drives.

The 1040ST added memory and brought the A: drive into the case, but dropped the RF modulator.

The Mega ST2 and Mega ST4 added memory, a detached keyboard, an internal battery backed up clock and a seldom used "Mega buss connector". It also added a graphics blitter chip.

The 520STfm added an internal single-sided floppy drive, later changed to a double-sided drive. This model was in the 1040 ST case and used the 1040 motherboard, which meant the memory could, at the cost of some tedious unsoldering, be doubled to 1 Meg. It also had the RF modulator.

The 1040STe added the ability to use SIMMs memory, added slightly better color, DMA sound, and analog joystick ports which were seldom if ever used for anything. This was the widely touted "Amiga Killer" machine. It too was in the 1040 case with the integrated keyboard.

The MegaSTe was the first model to be a significant improvement on the line, adding a "clock doubled" 16 Mhz 68000 CPU and an internal Hard Drive. It went back to the detached keyboard, but dropped the analog joystick ports. It added a 3U sized, semi-compatible VME slot internally as well. This is used to provide a second serial port on stock models. It also added, I think (memory straining here...) an AppleTalk compatible local area network port.

Many of these models also incorporated incremental improvements in the TOS operating system, some of them much better than others. The latest versions are much improved over the early ones, but unfortunately in many cases cannot be directly added to the early machines without a hardware upgrade. There were varying levels of incompatibilities between existing programs and new versions of TOS throughout the history of the ST.

Also, these are the U.S. models. There were other slight variants released in Europe, like the 260ST.

I probably shouldn't say much about the TT, as I know there are TT proponents here.. it was an interesting kludge, but not a very successful machine.

The Falcon was Atari's attempt to design a completely new system while still maintaining backwards compatibility to earlier STs. If it had been introduced a number of years earlier than it was, it might have enjoyed far more success than it did. Unfortunately its price was far too high, and its features far

too low to succeed against competing systems. It's main niche now is as an upgrade path for current ST owners.

I'll probably buy a MegaSTe to replace my current 4 Meg 1040STe, but I think I'll pass on the Falcon unless the price drops considerably.

Unfortunately this really DOES belong in .advocacy, but there are some things here which need to be replied to...

>Obviously you've never had to:

>1) Add a new piece of hardware to your PC

Really..? You mean I didn't just add a new SoundBlaster 16 board AND a new double-speed CD ROM drive..? Nor an S3 graphics accellerator card and CTX multiscan monitor..? I could have sworn I did..

I installed the new hardware, installed the new drivers, made whatever changes were needed to the AUTOEXEC and CONFIG files, and haven't had to touch them since.. (this was a few months ago).

I also run OS/2, so I had to make some changes in the config files there.. haven't touched them lately either. It all works just fine...

>2) Play a game on your PC

Shoot... and here I thought I just finished DOOM I and was almost through DOOM II (courtesy of that new CD-ROM drive I obviously never added..), just finished Rebel Assault and the Shareware version of Heretic (planning on buying the CD registered version.. the sound on that SB16 I obviously never installed was great, by the way).

>3) Put your PC on a network

Ah.. here you're right.. I never put *MY* PC on a network.. I have no need to, since I can run DOOM over a serial link.

However... part of my job is to help administer the PCs where I work, where we *DO* run several LANs.. mostly Novell now, previously Banyan Vines too.

Installing a network card in a new PC consists of running a program like InfoSpotter to find out what IRQs are currently in use, setting the new card to an unused IRQ, installing the card and drivers, then closing the case and turning it back over to the user who now can log into the network.

We do it all the time, with hundreds of PCs on the various networks.

>And you're probably not too concerned about making your system more
>stable.

You're 100% correct here.. I'm not concerned AT ALL with making it "more" stable since it's already completely stable..

The only time I've had a "crash" in recent memory was when I was trying to compress a GIF file that I'd captured in a different resolution than it was

originally.. apparently the compression program was trying to compress it in the original resolution and couldn't handle it.

Other than that it keeps going, and going, and going...

>with a Mac or Atari with some kind of boot manager it's _easy_ and fast
>to get past a buggy piece of software that's locking you up during boot.
>With a PC you have to boot from floppy.

No... with a PC you use the "boot manager" that's BUILT INTO DOS to either bypass the AUTOEXEC and CONFIG files, install them selectively, or choose any of a number of alternative configurations you can easily set up.

Does the Mac and Atari COME WITH a boot manager as you described...?

>Oh, so fast, especially if you're running OS/2.

Which I do... any slowness in booting is easily overshadowed by the power of the other features of the operating system... and with version 3.0, even the booting is faster.

Sorry... you'll have to do better than that...

BobR

(By the way.. for anyone new to all this, or who just can't seem to follow the thread of the discussion, none of this is "coming into the Atari newsgroups to advocate the PC and bash the Atari"... this thread started with Atari owners spreading misinformation about another brand of computer. As an Atari owner, I hate to see that happen, to ANYTHING, be it computers, cars or whatever. Saying PCs are crap is NOT going to make my STe any better than it is on its own merits...)

I would like to find out what Item/File selector people use
and why...

The Author of Freedom are trying to be the best there is,
there comments to me is that SElectric would be number one in the world,
I would state that UIS III is..

I am still trying to find a English Item/File selector that can beet
UIS III in every way, is there one...???

Mind you UIS III and Freedom are not free, the otheres are...!!!

Roger Sheppard.. (sheppard_r@kosmos.wcc.govt.nz) wrote:
[...]
: I am still trying to find a English Item/File selector that can beet
: UIS III in every way, is there one...???

I use have been using Selectric, and I find it much better than UIS 3. It works very well
under MiNT and AES 4.0. However I am now having one big problem. It is getting rather annoying having it run in TOS domain. If it ran in MiNT domain and understood other than 8+3 filenames it would be wonderful! If Selectric started to do this in the next revision I might well register it.

Sorry to deviate from the original puirpose of the messages but I just thought remembered:

I think I heard that freedom runs in MiNT domain and understands longer than 8+3 filenames. Is this true? Does it also do upper/lower case and all else you would expect like make folder, fileinfo etc.?

THe other thing i heard was that it is in a window. Does this mean that when any GEMapplication calls fsel_[x]input() you get a fileselector in a window and you can still access other appluications????? Can other applications then call a fileselector and have 2 or 3 or 4 of them at once??? This sounds too good to be true!

I thought a fileselector in a window would be impossible as GEM is `strictly non-reentrant'. How then, can the fileselector go in a GEM window?

Hope my thought are of help,

Source record: 170169

Hi.

Yesterday I downloaded the CLOE demo and when I depacked it, I found, that everything in this program (from _very_ short "doc", to screen messages) has been written in French! Well, I can understand five languages, but I don't know, why the authors think, that I can understand French too!

Yes, French WAS the international language; at the 18-th century, ie many many years ago; it is 20-th century now, and the international, most widely known language is _English_, whether you like it or not. For example: I don't like English, I would prefer _my_ national language but in these circumstances it is impossible to force anybody to learn Polish; so I can accept English as the language of the international communication AS LONG AS ANOTHER FOREIGNERS WILL ACCEPT IT TOO. If you use your national languages (German, French, Czech, Dutch for example), I will use POLISH in my programs and doc's. Polish, or...

Quomodo Vobis placeret, Galli defututi, si Latinum sermonem adhibeam?

>as a good midi sequencer? Would a 520 ST alone be sufficient for my needs
>(I can pick up a 520ST with monitor for $50 here)? Please help me out by

A stock standard 1040 STFM OR E (Tos 1.4 or above) will be quite ok.
If you want to run serious software like either NOTATOR SL or CUBASE,
then I suggest that you upgrade the ram to a minimum of 2meg, but you
can get away with 1meg. No other hardware is required, just plug your
midi leads in, and away you go. The difference between a 1040 & a 520
is that the former is a 1 meg machine and the latter is a half meg machine.

BTW, CUBASE & NOTATOR both only run with a mono monitor (atari high
resolution), so forget about buying a colour monitor.

>in suits or general overheads.

Shareware was created as an alternative to commercial distribution methodes.
With a low price due to low distribution costs. Which means it could have
been a commercial program insted.
Have you ever seen a commercial product with limits in ? In case you have,
how many people bought it ?

>

It does matter, cause you kill the shareware idea by saying crippleware is
shareware. The next thing we'll see is commercial beeing announce as shareware
and got limits, because of your definitions. You are simply opening up
the definitions to whatever you want it to be, and this is frustating and
hurting the market.

I'm NOT against crippleware. I'm not a pirate, (even though some people want
me to look like that). I'm only trying to protect the definitions. According
to you, there is not such thing as shareware any longer, or shareware is
equal to crippelware.

Harry, you're into NeST as well. I'm not sure what mailer you're using,
but have you ever thought about Semper ? Semper is beeing annouce as
a shareware mailer. Then you tell me how you'll test the Hydra protocol and
the Fax receive possibilities, WITHOUT paying first ?
Now maybe you understand what i mean.

(For those of you who do not know Semper, all i can say is sorry. Semper
is a damn fine mailer for use in the Fidonet world, but there is a few
limits which will not open untill you pay the fee. These are limits which
is important for it's use, if you want to receive fax's as well as using
a bi-directional protocol. In the mailer there is alternatives to the
Hudra protocol, but no alternatives to the Fax possibilites).

Semper is still a damn fine program! (And i'd pay, Eric), but it's not
shareware.

>are crippled. The principle is the same: You get the program, and if you
>like it, you pay for it, and recieve the added bonus of getting more (or
>uncrippled) features. Had nobody taken advantage of the idealist's

But how can i say i like a shareware program with limits in ? I could say:
It looks good, it sounds good, but does it work good ? And sometimes,
does it work at all ?
With crippleware you just "take the chance" and pay the fee to open up a few
limits. With shareware you get what you're looking at.

>Shareware ethic, there would have been no need of crippling... but this is
>not an ideal world, and there are a lot of unethical people out there. It
>is still Shareware, regardless of the functionality of the program. (Unless
>the program does nothing, or very little, of what is described in the
>documentation, then it is a preview or demo)

So now you're starting to back out Eric ? Who are in charge of stating when
it's a little and when it's a lot ? Only the users can state that, but how
are they suppose to do that, if it's one of the limits ?

>: One thing though. I really would like to know why you insist on calling it
>: shareware when it's crippleware. Whats the reason ? (Perhaps Hutch should
>: answer this).

>
>Because Crippleware is not an officially recognised deffinition. People

Have you ever thought about, WHY there is a new release ? Most often it's
due to a bug in the previous version, and you can hardly blame the people
for wanting a new version. And you can hardly blame them for not paying
the fee if the program they have suffers from a/some bugs. Some people,
(like myself) are simply waiting untill the bug's are fixed.
So again, it doesn't show a thing!

>

A "nag" box in Matserbrowse or ESS-code isn't doing any major damage, i
admit that, but now we have the frustation i'd mention in my message to
Harry.
You're doing one kind of a limit, which isn't hurting the user much, other
programmers are doing another kind of limit, which in some cases does hurt,
and both programs are beeing called shareware.
A disable save feature in Fansi isn't a problem either, but as far as i
remember Fansi, there is a few 'draw-modes' which also suffers from the
limits.
Perhaps you understand were i'm getting at now ?

>Think for all of ten seconds and you will see why not. The name
>"crippleware" has very bad connotations. What you do not seem to realize
>is that words change meaning over time. There was a time when Shareware
>meant you had the complete working program with no disabled features.
>It no longer means that, now. Now it means you have the program and you
>can take a look at it and use it, but you have to pay before you can do

>anything productive with it (such as save your work).

So you're scared about you're program beeing called crippleware, is that
really it ? Then i'll say you're the one who is cheating.

>
>When I say stereo, do you immediately think of an 8-Track? I think of a

>can someone help me make a script for use with connect?

Register Connect and you'll get the manual. Pay for the fun!

1. Open "Learn a Script..." under menu "Misc".
2. Give filename for the script (double-click for selector)
3. click "Learning Active" once (X)
4. Call BBS, enter password etc. until you've reached the
required destination you want to be in after automated
call.
5. Open "Learn a Script..." under menu "Misc".
6. click "Learning Active" once, and "OK"
7 Now, open "Dial" under menu "Misc", and edit the BBS/Server
you just called. Insert the script file you just did to
"Script" line (double-click for selector", and save
the phonebook.

The next time you call to that number the script is run, and
you can sit back and wait. If you want to stop it, press
<Ctrl>-C. You can see if a script is running from the
leftmost small circle next to the online time display.

Best Regards,

(Registered Connect user)

STF machines just have Composite Sync. There is a very faint visible picture on
that signal, due to electrical noise from inside the ST's video chip.

Kim Andersen (kim@dksoft.ping.dk) wrote:

: Well Eric, since you'd mention Fansi yourself, i would like to say i have
: downloaded Fansi as well, tested it and found no future use for it. I'm
: a Sysop as well, i also got the Crawly Crypt Collection.
: With these info, and your point of view, i'm now showing as a simple
: pirate who will not pay the fee. And the only reason is, you're missing
: registrations, (read money).

: When you start accusing people like you do using your thoughts, i feel
: you think i'm one of those as well, and to me thats not fair.

: I'm not saying there isn't any people out there using your program without
: registration, but isn't that just what you're limits in Fansi should cover ?

I am not accusing everyone who has ever downloaded the program and not registered it a pirate. That would be unfair, and even egotistical. Everyone downloads a program now and then and finds it to be of little or no use to them. And so they delete it, or simply don't use it and keeps it dor a download on their bulletin board. I do not berate SysOps or users for this. It is those who download the program and find it useful and continue to use it without registering it for whatever reason (assuming that they just don't want to, as opposed to can't yet afford to.) THat in my opinion constitutes a form of piracy. And I also _know_ that Fansi has been cracked and people are using illegitamate registered copies out there. I have recieved a message from someone telling me that he was using just such a version, and someone in the IRC was brazen enough to admit that he had made a key generator that was able to crack Fansi himself. This is bald-faced piracy, plain and simple. And the term "Shareware" had nothing to do with it.

: What results ? There isn't any results, only thoughts. You base all your
: accusations on thoughts, and in my opinion you should concentrate only
: on those you know for sure are doing something wrong.

Unless I am confronted directly by people who have pirated my program, which has happened on two occasions, how am I to know who is doing wrong for sure? I am not a part of the pirate scene, I have no formal association with such people. And yet I know they are out there, evn if I can not point a finger at any particular person and accuse them of piracy. These are not thoughts. These are facts as they have been presented to me. I do not accuse _you_ of piracy, nor anyone in your position who downloaded it or otherwise acquired it and found it to be of no practical use to them. (excuse the poor spellign today; the lag on this server is abominable)

>can pick up a 520ST with monitor for $50 here)? Please help me out by
>explaining whatever would be helpful for me to know. I have no clue
>about ataris. All I know is that I'd have to sink a lot of money into
>my 286 to get it anywhere near being able to do competent midi
>sequencing. Thanks for the help with an obvious (to all you atari-
>knowledgable people) question.

Minimum requirement would be a 1 MB RAM machine with a floppy drive and a
monochrome hires monitor. Items like a 1040 STF or STFM or STE and an
SM124/SM144/SM146 monitor are the things to go for.
This will be sufficient for minimal programs like Cubase lite (12-track).

The big ones (Notator, Cubase Score) require 4 megabytes of RAM and any hard
drive, so an expanded 1040 STE or a Mega ST 4, and a harddrive are the things
to look for.

Best for musicians is the Falcon030, it comes with 4 or 14 megs and an internal
harddrive, and is ready for 16-track digital audio in addition to what the old
machines do. (You'll need an extra LARGE hard drive, an optical interface and
14 megs RAM for that.) It also is the only machine available new.

bye, Peter

>Let's get one thing straight. Crippleware is and can not ever be
>shareware. Shareware is a fully working program without any limits, were
>you just trust the users that they'll registre. Crippleware got limits.

Just my two cents on this issue:

Forget it. To "trust the users" in NO WAY works nowadays. If your public shareware is anywhere near useable (for regular users, that is), noone will pay for it. Face it. It's a proven fact.

Example? OK, here's a fresh one. My print accelerator, released four months ago (speed increase 7- to 8.7-fold), has had NINE registrations so far. Downloads in Germany alone are about 500. I'm very happy about the fact that I decided (on first release) to have a hidden crippling in there, severely annoying Demo "users" from March 1, 1995.
Although I don't seem to get a wave of registrations now, I'm personally pleased by the fact that these THIEVES either throw the software they stole in the electronic bin or run into the crippling every time they boot their machine.

```
* Original Echo Area: Houston Sysop
* Original Message by: Paul Elliott of 1:106/88
* to: All

From: paul.elliott@hrnowl.lonestar.org (Paul Elliott)
Newsgroups: fido.housysop, houston.efh.talk, houston.internet.providers,
tx.politics
Subject: (fwd) another message against S. 314

Subject: WAKE UP, NET CITIZENS!
Hello there,

Give me about two minutes of your time here for a very serious problem
that is going to affect all of us. I've spent the entire day reading
through Senate Bill 314, the so-called "Communications Decency Act of
1995", as well as hundreds of pages of reviews, commentaries, and
impact analysis. This bill is going to be attached to another
communications regulation bill which is favored by many members of the
Congress. (The entire issue should come to discussion in early March!)

Long story short, if you post anything "indecent or obscene" at any
point on the Internet or on any BBSs after this Bill passes, you could be
fined $100,000 and jailed up to two years. Furthermore, whichever service
transmits your message -- whether it is a university or a commercial
provider -- will also be fined $100,000 PER DAY that the message is
publicly accessible.

For those that don't know this, the Internet itself is comprised of
thousands of individually-owned networks all connected together. For
example, I am building my own small network with my own computers, and
will then pay Netcom about $1,000 per month to have it connected to their
network, which is in turn connected to other networks--- creating the
Internet we all use. When a message such as this one is sent out, it
travels from network to network to network until it reaches its intended
audience. UNDER S.314, EVERY PROVIDER TRANSMITTING AN OBSCENE OR INDECENT
MESSAGE IS CRIMINALLY LIABLE.

If this bill is passed, huge sections of the World Wide Web (WWW) will
shut down almost immediately. Usenet groups will be severely restricted,
because anything "indecent", annoying, or harrassing--statements like "the
Holocaust never happened" for example--could be illegal. Most Net BBSs
like ISCA or NAILS could cease to exist since live chats can't be censored.
American ftp sites will be strongly restricted, and access to foreign sites
could be prohibited altogether. And many providers will either screen each
individual message for content, or more likely, simply close up shop and
leave. In the end, the Internet will be pratically worthless, compared to
```

the vast resource it is now.

And for those of you who enjoy Internet mailing lists, these lists will almost definitely end with the passage of this bill. Why? Because after the passage of this bill, anything potentially offensive to *anyone* reading a list will hold the author or list manager criminally liable. Most mailing lists on the Net are free, and probably can't afford the risk of publishing something offensive.

I know a lot of the "petitions" going around are rather difficult to understand, and I hope this message makes things a little clearer, and make you understand why it is so important for you to ACT NOW.

"Authority has always attracted the lowest elements in the human race. All through history, mankind has been bullied by scum. Those who lord it over their fellows and toss commands in every direction and would boss the grass in the meadow about which way to bend in the wind are the most depraved kind of prostitutes. They will submit to any indignity, perform any vile act, do anything to achieve power. The worst off-sloughings of the planet are the ingredients of sovereignty. Every government is a parliament of whores.
"The trouble is, in a democracy the whores are us."

--P.J. O'Rourke,
Parliament of Whores

(1) IF YOU OR YOUR FRIENDS OPPOSE THIS BILL...
If you haven't already signed another petition floating around on the Internet now, then get as many names and addresses and email them to me at <stan@rain.org>.
Please send me:
- your name
- your email address
- whether or not you are a US citizen
(Non-US citizens may still sign!)

(2) IF YOU WANT MORE INFORMATION ABOUT S.314...
Point your Web browser at http://www.wookie.net/~slowdog/ or just write to me and ask for info. I've got the text of the bill itself, as well as stuff from PCWEEK, Newsweek, a CNN transcript of debate on the bill, and various papers of analysis. Yours for the asking.

(3) FORWARD THIS TO *EVERYONE* YOU KNOW...
Don't let the Internet go to hell while you sit by and watch. Send this message to everyone you know so that they too can know about this threat to our freedom. Chances are, they'll thank you for it. And if they find it offensive? Well, at least that's not illegal... YET.

John Stanforth Jacobs
Editor, Moonlit Thoughts At Three A.M.

Kim Andersen (kim@dksoft.ping.dk) wrote:

: Yes and no. The original concept of shareware was to be an low cost
: alternative to commercial programs, due to low distributing costs.

This is also true. Plus, the author benefits from the full measure of benefits afforded by not having to pay overhead, costly distribution fees (unless they so desire them) or getting only a percentage (and a small one at that) of the sale of the product as they would going with the commercial aspect.

: But how can i say i like a shareware program with limits in ? I could say:
: It looks good, it sounds good, but does it work good ? And sometimes,
: does it work at all ?
: With crippleware you just "take the chance" and pay the fee to open up a few
: limits. With shareware you get what you're looking at.

This hardly applies. Most of the time the only feature disabled in a crippleware (by your deffinition) program is the save feature. Do you question the competence of the programmer enough to wonder whether or not that feature will really work in the version you register? That is both unfair to the author, as well as a little egotistical to think that, in spite of the fact that he or she has written a nice program in which everything else works, that the save feature may somehow not work. So a Shareware program may not be 100% WYSIWYG. So what? If you don't have confidence enough in the author to be sure that one of the disabled features will work as well as the rest of the program, then perhaps you shouldn't register any "crippleware" at all. I am not so mistrusting. If, on the very small chance, I _do_ register something and the disabled feature does not work as perscribed when I get the full version, then I at least can get into direct contact with the author to tell him or her so, and the problem can get fixed.

: So now you're starting to back out Eric ? Who are in charge of stating when
: it's a little and when it's a lot ? Only the users can state that, but how
: are they suppose to do that, if it's one of the limits ?

It is to your own discretion that you decide what is a lot and what is a little. Disabling one feature, to me, is a little. Disabling most features is a lot. It's quite simple. And anyway, I consider a "demo" to be something akin to a guided tour, or a simple program in which there is little or no interaction, a program that merely shows you the features of the program without letting you try the porogram yourself.

: And you are breaking up the definitions to suit your own use, or maybe i
: should say, your own ideal world.

I am not breaking up deffinitions; they are all a part of the same category.

>
>Um, how? (Just out of interest, not to bash GUIs :-) Applescript doesn't
>count :-)

Even a bad GUI (Windows) lets you do it.

On a Mac, in the Finder, choose the "Find file" menu item. Then choose "by filename" or whatever, and put in "*.bak". Choose OK or Find or whatever.

On Windoze, in the File Mangler, choose the "Search" menu item. Put in "*.bak", choose OK.

Both will display a window showing all matches. Select them all, and drag them to the trash, or press the "Delete" button.

Voila, all backup files go away. I'm sure you can do similar things using the various X file managers. You just have to know your GUI a little.

>Me too! A pity that something similar isn't available under X. (The
>Motif fileselector is much less powerful...)

All of the X fileselectors I've seen are *horrible*; they usually involve you typing the either the filename or the path. Duh. Xv has a nice Mac-style fileselector; it's probably a custom widget though, since I haven't seen it in any other programs.

>IMO nedit is a nice editor. I have to agree, though, that X lacks
>standardization even more than the Atari platform. Just look at all
>those applications which are completely different to use...

And most of them are really useless; xmps (a Motif process stats viewer, sort of a GUI 'ps' command) is really bad, for example. xfig is nasty, too. Xv is probably the only half-decent GUI app I've ever seen for X.

>(Sorry, no experience with NeXTstep).

NEXTSTEP is pretty much the Mac GUI running on UNIX, and looking a little different. It's as standardized as the Mac, thanks to its object-oriented GUI foundations. Very nice to look at, and to use, though it does have some stupid things in it... like the "black hole" or

"recycle symbol" icon, whose use isn't redily apparent... it's a trash
can idea, but you can't get stuff back out of it (so the "recycle
symbol" is a _really_ bad idea, it'll give the wrong impression about
the action).

>What I really would like to see is a Gemini-like file manager for X.
>All the free file managers I've seen so far cannot come close even to
>the TOS 1.0 desktop.

The problem with that is that all your applications will still be
crappy. I'd like to see a Mac-style or GEM-style window manager and
widget set; maybe make it function-compatible with Athena or Motif
widgets so you can just recompile all those ugly programs.

>--Cornelius (who has managed to be completely off-topic ;-).

'tis the way of USENET.

AFAIK, Apple doesn't care about what software you run on your Mac, as long as you have a Mac... which makes perfect sense. Maybe some of their developers where complaining, but I doubt it.

They probably just don't want anything that points out how slow System 7 is on the PowerPCs, since lots of vital parts (you know, like the file manager) are still emulated 680x0 code. It might be a little embarassing.

I'd buy MagicMac-PPC in an instant though; using the PageStream that I have on a zippy PPC-604 system would be much cheaper than buying FrameMaker... ;-) I could also continue my GEM app development at a reasonable speed, which would help ensure the cross-platform compatibility of my software...

In message 49800 b9458317@wlv.ac.uk who is now calling himself Sam Tramil (rather than Vision Fx which was his alias last time he posted crap in here) gave us a rather pathetic attempt at humour.

Then he claimed that one of his "friends" had got into his account - but is this really the case.

May I suggest that we ignore the spoutings of this rather sad, pathetic individual (whoever he may be) who obviously has nothing better to do than trying to start a flame war.

Steve.

I have run the Ultimate Arena Demo on my Falcon.. It must be started from ST Low if I remember correctly.. BTW I used a VGA monitor (shouldn't make a difference in ST Rez's though)..

3738. For Sale (hardware)

Newsgroup: comp.sys.atari.st
Date: 1995-03-05 19:37:58 UTC
From: avp@cs.mun.ca
Message-ID: <1995Mar5.193758.14036@cs.mun.ca>
Source record: 169911

I have the following Atari stuff for sale. All prices
are in Cdn$ and include shipping. The exchange is about 71% to
US$ (approx) (i.e. 100$Cdn = 71$US)

SLM804 $250
Mega 4STe $300
Mega 4ST
(with Overscan Mod) $225
ICD HD Box
w/ 85 & 50 Meg HDs $300

SC1224 Col Monitor $100

Migraph hand scanner
w/latest TouchUp $100

Some of this can be mixed and matched, espaecially the HDs. The
50 Meg originally came in the STe, and could go back there.

Feel free to make offers.

3740. Falcon w/IDE & SCSI -ICD

Newsgroup: comp.sys.atari.st
Date: 1995-03-05 20:08:13 UTC
From: richcsst@crash.cts.com
Message-ID: <D4zH9q.5Es@crash.cts.com>
Source record: 170185

Hey, I really fouled up this time. I just bought myself this nifty new Falcon system. I used to have a 2.5 meg ST with ICD Host, Adaptec 4070, and two RLL HDs using the ICD Link II drivers. When I connected them to my preinstalled IDE HD Falcon, it booted the HD's, the IDE and only SCSI device 0 LUN 0, but ignored my HD on SCSI device 0 LUN 1 (Yes, I removed the host adapter and connect straight to the Adaptec). The software on my IDE was HDX 6.x. I was not pleased with losing my last hard disk. So I stuck the ICDBOOT.PRG into the C AUTO folder. It worked decent, but was redundant as the HDX autobooted. I couldn't set the ICD to autoboot because the HDUTIL.PRG needs to have an ICD host adapter in order for it to function (dirty trick). So, I whipped out my old version of Pro Utilities that I had and all hell broke loose. I totally trashed my IDE (with Atari Works, Sound Manager, Audio Fun Machine, and HDX utilities) drive and have absolutely no way of using my hard drives without booting them from floppy. Remember, I can't make it autoboot without HDX or HDUTIL.PRG.

So, what I am asking is does anyone have a solution that will let me use both drives connected to the Adaptec 4070, along with my IDE inside? I still have my host, and will use it time to time when checking old ST compatibility when programming (I'm keeping the 2.5 meg ST). Any suggestions?

Also, could anyone please send me the sound utilities via Email, as they are normally included with Falcon's and shouldn't piss Atari off if you should send me it, as I just bought a Falcon and accidentally trashed them. I will just have to wait to get the other programs from my dealer again (who is VERY far away) when I see him. I really miss being able to hit RETURN and hearing Monty Python's "NI!". I guess my dealer neglected to include all of the floppies in my system. I have MultiTOS and some "extra programs" (games), but the sound utilities and "Works" are no place to be found. I have the manual, but no disks. They were just on my IDE HD and have now disappeared.

Thanks in advance for help on either request.

My Email address is: richcsst@cts.com
My ftp dropbox is: ftp.cts.com /usr/spool/ftp/pub/richcsst/incoming

*** Jaguar System for sale ***

I have an extra Jaguar System for sale. I bought it to play networked games, but they don't seem to be coming out very fast. So instead of sitting on it, I've decided to let somebody else enjoy it.

Here is what I have for sale:

Jaguar core system (RF box, controller, AC adapter)
Second Controller
Cybermorph
Trevor McFur in Crescent Galaxy
Raiden

I have the boxes and manuals for everything except Raiden (manual only).

Price? $215 shipped to your door.

Semper is a good example of what a shareware program should be IMO. It
works fine unregistered - I used it unregistered for a month or so - but
has Hydra in the registered version to tempt you.

I agree with you that if a program is crippled to the point of being
unusable it isn't shareware, just a commercial demo really, but I have no
objection to shareware programs having lots of non-essential features
missing.

I'm not so sure, Kim. I doubt that anyone would have written such a
"law", an *if* someone did, what are the chances all shareware programmers
would like to follow these rules?

>> *If* there are commonly and widely accepted rules for these matters,
>> could anyone please update me? And if so, don't forget to include the
>> origin of such a "document"!
>
> I'll try a see if i can locate something.

Yes, please do!

I support some great shareware programs in Sweden, and to my knowledge
there is *none* that isn't somewhat restricted in its unregistered
version. The mildest form of crippling is in Stefan Radermacher's Selectric,
where *the only* practical difference between the unregistered and registered
versions is the absence of a *PLING* during boot!

Still, the reason for registering good shareware programs and games is,
in my opinion, most of all a question of showing *respect* to the author,
who's had the good will to spread his program/game in such an un-selfish
way:

"Hey, I've made a great program! You can try it out for free!
If you like it and use it regularly, please register. Fee is only
DM XX,-. You will stay true to this idea, won't you?..".

I know you agree with me on this, Kim. Let's hope more users than you
and I get to feel the same way!

Support shareware authors!!!

Yours sincerely

> Have you actually tried this AIFF-read/write with CAf 2.x files?

CAF??? Cubase Audio Falcon? I am not rich enough for such a program, so
I haven't been able to specifically test with AIFF files from Cubase.
I have tested it systematically with AIFF files produced with various
programs on the university SGI machines and it plays them quite happily.

I also have several registered users who use the program in conjunction
with Cubase and they haven't reported any problems, although that doesn't
mean that the problems don't exist I guess.

Perhaps you could email me an AIFF that causes SuperSam to crash, then
I can look into the problem.

Much thanks,

As far as an affordable MIDI program, I would recommend checking out Dr.T's Omega. Seems to me I recall them selling it for under a $100 now! (I could be wrong on the price though.)

Omega will offer you a lot of performance. Cubase is my personal favorite, but a bit more pricy.

I haven't been following this thread, but if your looking for a colour icon editor for deskicon.rsc files, then there are 2 shareware alternatives around that I know of.

One is called Dr Bob's ICDRAW or sommat and the other is Kaliedoscope (which can be found on ftp.cnam.fr IIRC, fraid the directory/filename escapes me though)..

Hope that helps..

Message-ID: <3je2th$c0g$2@mhadg.production.compuserve.com>
Source record: 170002

An Atari 520 ST for $50 would be a good deal.. but probably NOT for music.

The 520 can NOT be easily upgraded.. it requires hardware hacking and can be expensive, not to mention reducing the overall reliability of the system.

The BEST thing to look for would be a 1040STe <--- note the "e"

These used industry standard SIMMs for memory, and can be easily and cheaply upgraded to their maximum of 4 Megs of RAM.

Any serious music work is going to require a lot more than the 512K bytes in a 520ST. Seriously, you would quickly become dissatisfied with it, and would find it hard to upgrade.

A "regular" 1040ST has 1 Meg of RAM which would be better, but again can NOT be easily upgraded beyond that amount.

The STe, while newer and thus a little more expensive is still the best choice, and can be found for sale used by watching the articles posted here and in other Atari newsgroups, and by checking around on local BBSs. Leave messages indicating your interest in buying an STe system and see if anyone has any hardware they'd be interested in selling.

Just as an indication of what it might cost, I bought a 1040STe with 4 Megs of RAM installed for $125 about a year ago. That was just the computer by itself, so you'd also need to get an Atari monitor.. probably another $100 or less.

I think they intend to drop the 68K line altogether some time this year. It's not a good time to buy a Mac right now, it seems. PPC prices are sure to fall, as the nice left from the vanishing low-end 68K macs is filled. Also, while you wait, there should be some nice time for software to be developed. They say System 8 will run on a 68K Mac was well, in an attempt to head off feelings of abandonment by current Mac (68K) users. Sure....and Windoze 3.0 would run on an 8088 XT at 4.77Mhz, with a monochrome graphics card. (I tried this one time. It was called "real mode." It was a complete joke, but it did run. It was v 3.0...3.1 dropped real mode)

You probably meant to say "Sega Genesis" uses a 68000. Super NES uses a 65816. Gee, wasn't the Apple IIgs the only computer in the world that uses that chip? I'm sure the producers of the 65816 were sure glad SNES chose it....otherwise they'd probably be doing something else that pays less... 65816 is like a 16-bit 6502, right?

>
> *All* of the current PowerPC chips are 32-bit. The PowerPC-620 will be

What's up with the Pentium? Seems like I remember somewhere, a watered-down claim that hte Pentium was "64-bit." It is NOT, is it? Once again, I understand that "how many bits" a system is is not necessarily useful information. However, what about the Pentium ($900 random number generator, as someone else put it!!)

> 68060 has been a known dead-end for several years. Motorola was not
> willing to go through the hoops Intel is going through to produce the P6.

What about the p6? Is this the *END* of the Intel regime? Surely the
8086 will RIP after that. What then? Time to sell the Intel stock as
soon as the p6 comes out and gains a little popularity?

There was a WordPerfect for Atari ST, about 1989 or 1990 they dropped
it. You still find used copies floating around the net. I picked one up
a few weeks ago. However, it seems to crash a lot on the system I tried
it....512K 520ST with no hard drive. I am thinking it is just a case of
a puny computer. I'm going to upgrade and try it again...(and get a hard
drive, too!!0

HM> the SCSI-bus. The driver has to support his, of course.

Interesting !! I have just got an XM5201 3.4speed Toshiba .Are you saying that I can sample audio data from the CD directly through the SCSI Bus onti Hardisk ?

HM> It works great with CD-Tools from Julian Reschke. There is some
HM> freeware stuff
HM> available for this purpose, too (but needs capable driver).

such as ? (The freeware stuff) and the 'capable' drivers ? I use Extendos Pro/HDdriver on a Falcon BTW.

Otherwise where can I find CD-Tools ?

I was thinking otherwise of using the line-out ports on the back of the Drive to 'sample' the audio from CD using the AudioCD player using a suitable D2D doftware.

>However, didn't the Amiga have BOTH "sprites" (player-missile graphics
>like the 8-bit Atari) and a blitter?

And hardware scrolling, and HAM modes, and and and..., the Amiga was vatly
superior in terms of graphics and sound hardware, after all, the Atari 8
bit series was it's predecessor.

>Then came the model 500 (which was essentially like the 1040ST in
>shape/configuration), and the model 2000. These were the same processors
>and graphics modes as the original Amiga.
>
>Then came the Mega ST. Do these all have blitters?

Yep, but the Amiga's blitter was supported not only by the OS, but by any
game that hit the shelves, as opposed to ST games.

>Of course, then came the STe, with 4096 colors. Did all STe's have
>blitters.

Yes.

>Remember how it was possible to bring all 512 colors to the
>screen at once with programs like Spectrum 512? The Amiga had "hold and
>modify" mode (HAM) which could bring all 4096 up. I don't think the

Yes.

>What increased sound capabilites does the STe have? It's stereo, right?
>Are there more voices or what? If there's only 3 voices then what - are
>there two on one side and one on the other?

Nope, it's 2 channels 8 bit 6.25/12.5/25/50 kHz DMA sound (i.e. one left
and one right channel) *plus* the old 3 channel mono soundchip.

>Then came the Amiga 3000. I don't know what the hardware is in here, or
>what the increased graphics/sound might be. Was this a 68020? At what
>speed?

68030/68882 at 25 MHz (some early models at 16 MHz, AFAIK), this machine
had an integrated Flickerfixer (->30 kHz monitors) and somewhat enhanced
graphics capabilities (640*480/60 Hz non-laced, AFAIK). It also had the
Zorro 3 bus and an integrated SCSI host adaptor. The best Amiga ever
built, and it was there at the same time as the TT.

>I suppose the Mega STe fit in here somewhere. But it was "only" a 68000,
>right?

The MegaSTe was a downsized TT and came _after_ Ataris 030 machine.

>Then came the Amiga 4000. Same deal...what about this?
>
>Of course, then came the TT, which probably helped even the odds a
>little. Was this as good as what Amiga had to offer?

Nope, the TT and the 3000 were there at the same time, sorry. Atari had
nothing to match the 4000 models.

>Finally comes the Falcon. (I can't wait to get my hands on one of
>these!) Then I see (towards the end of the Commodore regime) an Amiga
>1200, which looks to me like a Falcon-wanna-be. Was it?

Yep, for the first time, Atari sold a machine that could beat the Amiga in
game and demo capabilities. Sadly, it was "all-in-one" and sold at a price
too high for a hobby machine.

Hey, wait a minute, why are you getting so nervous ? It is not because you
can't understand a language that this language is banned ! I do not
understand German so I do not use many German programs.
One clever solution would have been to contact the author of CLOE and to ask
him to translate his program (or to include a README file in English).
I am sorry but I can not accept such a remark (especially on Monday morning)!

Have a nice day.

>processing; IMHO it's totally unsuited for anything. :-(

One reason for bombing during printing could be, that the page size
is bigger than supported by the printer driver.
Another reason is Speedo 4.1, which is a rather old and buggy version as
far as I know..

Otherwise Works runs rather stable on all our machines at the uni-
versity now.

One reason to use Works is, that it is really easy to use. A friend of
mine tried to p rint labels with Works for OS/2 - it was so complicated,
that finally we used the Lable function of ATARI Works, that was really
easy.

It seems we are talking about different revisions of the TOS. The
version i have (3.06) definitely does not contain any 68020 code in
the GEMDOS/AES/VDI part, the first two being written mostly in C and
the latter mostly in assembler. I have a complete disassembly of the
TOS, and the 68020 specific parts are in a very small minority, mostly
in the startup code, or sometimes to clear the caches or something
like this.

I use Selectric mostly (registered), evaluating boxkite, and Freedom.

: I am still trying to find a English Item/File selector that can beet
: UIS III in every way, is there one...???

I looked at UIS, and didn't like it. It is so big and ugly...yeuch. So I don't use it. OK, many people use UIS, and I agree that is is a powerful FS....but Selectric does all I want it to.

: Mind you UIS III and Freedom are not free, the otheres are...!!!

The others are not free. Selectric, Boxkite and Freedom are Shareware.

Selectric looks nice with all TOS based computers...and has many features. here is an excerpt from a recent article I wrote in a new Atari magazine coming soon:

Enter the replacement file selector, and top of the list has to be the ShareWare program Selectric, now at version 1.10 with it's very nice interface. Not only is it mouse driven, but also has comprehensive keyboard short-cut support. Other features include an intelligent file finder and selector, file manipulation functions, such as copy, move, rename, and delete, and UNIX type wildcard support. Selectric has the ability to load several files in one go, wih programs which support it. The program only displays 8 files on a standard ST, but can display more on a Falcon and TT.

Another one worth mentioning is BoxKite. Similar to Selectric, but with added support for long filenames under MiNT, and with a resizeable window.

I would have written more, but I had constraints on the number of words...(the final version of this bit was even smaller!

Boxkite does not look as nice on STs. It looks much better on a Falcon...esp with the 3D look.

Freedom is very nice too, but I find that it takes up an acc slot, if using under singleTOS. You can also open upto 8 Freedom FSs, and move/copy files between each one. Nice looking too. English version coming soon from Joe Connor, and if everything goes the way planned, then you will be able to register it with me too.

Regards
Danny

I believe it's on the University of Michigan's system (or mirrors). Try
using ARCHIE, it works great for finding files.

: What kind of server? How, for instance, would I use Chimera with your
: average joe university unix account?

You will need to link up to your University via SLIP. Your university
will have to provide a SLIP link via dial-up access. Ask your computer
services if they do provide it, or if they will.

I like it. I like it. :-))

: it is held _somewhere_ closer to the middle of the country than the usual

Yes, a good idea. However, I must say that I usually go to the Atari
shows in London (gives me a chance to see melanie too. :-), as she
works in the SE, and we only get to see each other at weekends (OK
Danny, enuff of your love life...)

But, I will talk to a few people (when I get some time), and see what
can be done. What we need is a place which is cheap/free, where
everyone can get together...

Other user groups/SIGs here, get in touch with me...Somewhere in the
Midlands is good for everyone to attend.

I only have to say that I totally agree...not that I'm polish
or anything, but there's nothing more annoying than programs
with docs only in french or german, for example. English is
and has to be the common language for computer users....
What if I released a program only with norwegian docs !!!!!
(which is my national language)

Especially shareware authors, who want to reach as many users aas
possible, should write in english, or at least get in touch
with someone who can !

That's all I have to say, thank you.

Per B�rge Heidenstr�

3797. Bad Files at UMICH

Newsgroup: comp.sys.atari.st
Date: 1995-03-06 13:05:25 UTC
From: andrew@minster.york.ac.uk
Message-ID: <794495125.11@cs.york.ac.uk>
Source record: 170092

Hi.

I spent ages trying to get long filenames with minix and couldn't
do it because I'd downloaded fu2-bin.zoo for my file utilities.
If, in future, I find that a program doesn't work or
has been updated, who do I tell?

Anyway, if you want to use Minix on your atari, get fluts-39.zoo instead
and you won't lose as much hair as I have.

Sorry to be abrupt but I'm still annoyed.

3799. ANNOUNCE: Stello 2.1

Newsgroup: comp.sys.atari.st
Date: 1995-03-06 13:18:27 UTC
From: atari@monet.name
Message-ID: <1995Mar6.131827.29257@imada.ou.dk>
Source record: 170098

Hello everybody.

Stello 2.1 othello is out with features such as

- Works under Gem, all Atari computers, all screen resolutions, (x resolution must be at least 640).
- Supports Multitos and WINX.
- Uses multitasking under Multitos.
- Advanced gameplaying algoritms, alfa-beta minimax, iterative deepening, response killer table, saves game tree and uses the zerowidth minimax modifikation.
- One of the best Othello programs in the world.
- Background pictures on the board as black/white or color.
- RSC files in english, german, french and danish.
- Dialogs in windows.
- Nice interface (3d buttons and checkboxes even under old tos versions, niceline menus, animation of disc's).
- Printing of moves, board and transscript as ASCII, GDOS or Speedo GDOS.
- Export of moves, board and transcript as ASCII or META file. This means that you can take the output and use it in a wordprocessor that supports import of META files.
- You can set the size of the output, (boardsize of 4 - 16 cm) 2 types of transcript, (with or without disc's) and turn on/off the border text (a b c d e f g h, 1 2 3 4 5 6 7 8)
- There is a (very primitive) fontselector, and you can choose the output device (printer from 21-30 and meta file from 31-40)
- Context sensitive help with St-Guide.

New in Stello 2.1

- All menuitems can now be reached via keyboard shortcuts. The user can change the shortcuts by changing the RSC file.
- Menu layout changed to be more like the GEM standard. (Gerd Castan)
- Mouseform changes are now done inside a wind_update(BEG_MCTRL), wind_update(END_MCTRL) block as they should be. My error :-(
- Fewer graf_mouse(OFF), means the mousepointer dosen't flash so much.
- Saved endgamelevel settings now used correctly on startup.
- German RSC kindly corrected by Thomas Cloer.
- Internal timer uses a system vector instead of the Timer A interrupt. This means that you now can use Stello together with other programs that uses the Timer A interrupt.
- Better communication with St-Guide under Multitos. (The memory protection flag for Stello can now be super instead of global)
- Basic Othello Strategies by Colin Springer included in helpfile.

- Various minor bugfixes.

More details in the documentation. Stello is a Shareware game. I have uploaded the game to the following ftp sites, in the file STELLO21.LZH. atari.archive.umich.edu, micros.hensa.ac.uk, ftp.cs.tu-berlin.de, ftp.uni-kl.de, ftp.cnam.fr.

Happy Othello playing.
Claus J. Pedersen.

Subject: Wanted - ProTracker ST Manual.

Having looked at a demo version of ProTracker ST for the Atari STFM, I decided to register, not just for the latest version of the program, but mainly for the full manual and last year I sent off my fee to Karl Anders Oygard in Norway.
When the disks arrived three months later, I was disappointed to find that the text file holding the manual was damaged and unreadable and I promptly returned the disk for a replacement. To date, this request and several letters of enquiry have been ignored. So, if anyone has been more fortunate and has received the full manual, I would be grateful if they could contact me. Thanks. Glenn.

Uhm, there is no need to parse HTML. Parsing the HTML file is something
the author of the web pages should have done. A simple stage changer
would be enough to mark font changes and such.

Erlend.

>I believe it's on the University of Michigan's system (or mirrors).

It's there. That's where I got it.

> [...] Try
>using ARCHIE, it works great for finding files.

Actually, I've had startlingly poor luck finding Atari-related files with Archie. Just last night, for instance, I did an Archie search for the Freedom file selector that's been mentioned here recently. Found several documents purporting to relate to academic freedom (from comp.org.eff.*, I think), an FAQ for the FACE bill in a few alt.fan.rush-limbaugh archives, and about twenty references to something called freedom.texi, the contents of which I couldn't begin to guess. No file selectors. The problem with Archie, I think, is that to find a particular file among the morass of data that Archie knows about, you almost have to know its exact filename, in which case you probably also know exactly where to find it in the first place.

At any rate, I did finally find Freedom, in (to my mild chagrin) a.a at Utilities/Fileselectors/freedomd.lzh. All in German, of course. Sigh. Anyone know where besides Hensa I can get this Ruftrade program everyone's talking about? Archie was no help.

Toad's last catalog list the Gemulator 3.0 for $159 including Atari TOS
2.06 ROMs. You can buy it less the ROMs if you have a cheaper source.
Give them a call to double check on the price (it might be cheaper now)

In article IAA03373@mail.cs.utexas.edu, CONRADUS@PLEARN.EDU.PL (Konrad Kokoszkiewicz) writes:
| Hi.
|
| Yesterday I downloaded the CLOE demo and when I depacked it, I found, that
| everything in this program (from _very_ short "doc", to screen messages) has
| been written in French! Well, I can understand five languages, but I don't
| know, why the authors think, that I can understand French too!

Well, I think that if they had known that you Mr K.K. (it's funny when read in french) would upload their work, then they surely had written it entirely in polish. It's your fault: you should have warned them before they start coding their demo ;-)

Seriously, I'm pretty sure the authors of CLOE are not aware at all that their demo would have been spread so far and wide.

| Yes, French WAS the international language; at the 18-th century, ie many
| many years ago; it is 20-th century now, and the international, most widely
| known language is _English_, whether you like it or not. For example: I don't
| like English, I would prefer _my_ national language but in these circumstances
| it is impossible to force anybody to learn Polish; so I can accept English as
| the language of the international communication AS LONG AS ANOTHER FOREIGNERS
| WILL ACCEPT IT TOO. If you use your national languages (German, French, Czech,
| Dutch for example), I will use POLISH in my programs and doc's. Polish, or...

OK. Then I'll buy a polish->french dictionnary, as I've already done for german docs (I mean buy a german dic.); although I don't know german at all, I've so far always managed to use the programs, maybe not the most efficient way, but who cares ? CrackArt (first version) was a neat example.

I've had -- about foreign languages -- the following funny adventure: I am the author of 4 games for the Atari; they're all shareware (postcardware to be precise). I've uploaded all 4 on atari.archive, and one day, I've had the surprise to find one of them on the cover disk of a famous (at least in France) ST magazine. All my games are in english, and so are docs. What do you think happened ? I've got 4 cards, 2 of them flaming me because docs were in english. As usual, not a word from the french magazine, but then again, the game wasn't meant to be specifically distributed in France.
(BTW, I've sent those 4 people the latest version plus french docs.)

So, as I've a 5th game almost ready to be distributed, and to join the "crippleware" thread currently running on c.s.a.st, I've got an idea.
A brilliant idea, thank you Konrad. What about crippling by only giving french (or any other language) program and docs, and waiting for registration (with money this time) to send english program and docs ?

It's only a matter of few hours, just redraw all texts in french.
OK, I'll stick to this.

: This just about sums up their crappy attitude.

: S.Lai

I've kept the story because it is important.

How can they keep trading? I suggest Paul Hills writes to the Trading
Standards authority and complain. Plus I suggest that magazines do
NOT take their adverts in future. I know some magazine editors read
internet news (who doesn't!) and so they should put pressure on Gasteiner to
improve their service or accept the wrath of Future Magazines' scorn :-).

-Andrew

P.S. Sorry about the subject but I wanted to get editors' attentions.

Nope, not this time, Hendrik.

In the above mentioned post (which you massacred by taking bits and pieces out of context) I was replying to a posted question about 'emulators' in general, not MagiCMac specifically. My comments would refer to the Gemulator, Spectre GCR, SoftPC, MagiCMac, or any software/hardware that allows you to run software intended for one platform on an entirely different platform.

And quite honestly, I don't give a rat's behind WHAT you want to call the MagiCMac... emulator, TOS replacement, preemptive multitasking operating system, whatever... it jusdudnmadda. Hey, if it looks like a duck and walks like a duck and quacks like a duck, then for all intents and purposes... it's a DUCK! :)

And one more thing... stop calling me 'John,' OK? There are far too many 'Johns' who frequent this newsgrop so it get's confusing. I much prefer the moniker 'Hutch' so as not to be confused with the other guys or a toilet or a hooker's customer (in the common English vernacular). :)

Always a pleasure...

Bob,

Just out of curosity, but it seems to me that you don't consider the
TT030 or the Falcon030 to be ST computers. Why? I consider them all
to be in the ST family. They just have faster processors and better
features (i.e. better graphics and sound).

Source record: 169961

Geeeez, Kim... this is absolutely hopeless!

I was going to reply to your multiple posts in detail, but that would obviously just be a waste. So here's my (hopefully) last word on this:

1) I did NOT call you a pirate. STOP making accusations that I did so. I DID say that I saw no reason why honest people would complain about reasonably crippled shareware. That's my opinion only. If you don't like 'crippleware' that does not make you a pirate; you only share their views.

2) In my opinion (one that is evidently shared by many others), shareware that has certain features disabled until the registration fee is paid is still shareware. You disagree. That's fine, but it does NOT make your opinion universal. Stop treating opinion as fact.

3) On all commercial services, a short software description (including any limitations) is usually provided that the user can read before deciding to download it. This is not always made available via ftp, but it could be via 00index files and such. Private BBS's should also have a short text file describing the software. Does your BBS do this? If not, it should.

4) Eric and Michael have addressed this quite well as shareware authors themselves, I think. If you refuse to accept their logic, so be it.

5) Can we move on to more useful discussion topics now? Please?

Neal,
I think that B & C Computervisions in California has ST manuals
for sale. I don't have the number handy, though. If you want
the number drop me an e-mail and I'll find it for you. I'd suggest
picking up a copy of an Atari magazine. In the US there are
Current Notes and ST Informer. In the UK, ST Format and ST
Applications are available. I think that these are the best
sources for information. However, as far as simple desktop
operations, a manual probably would be better.

Could someone please explain what is needed and how to set up everything to
be able to run Chimera. I know it a lot to ask, but I sure someone will
help!

>

I agree with 1 and 2.

>>3) Put your PC on a network
>
>Ah.. here you're right.. I never put *MY* PC on a network.. I have no need
>to, since I can run DOOM over a serial link.

I've install a few PCs with network cards for running DOOM. It's a case
of plug them in. Run the install software. Select the brand name of card.
Take 2 minutes to put a separate config for NetDOOM. Call the batch file
which loads up the network drivers.

Boot up, and run DOOM.

Now, let's see the ST trying to run a network without even half as much
hassle?
Are there actually any ethernet cards for the ST? I know of a cartridge
port device, but is that one ethernet?? And I picked up my network cards
at 5 pounds each, and I'm sure that the ST equivalents are a bit more
than 5 pounds.

3828. FOR SALE: $625!! Falcon030 4MB w/software

Newsgroup: comp.sys.atari.st
Date: 1995-03-06 19:57:28 UTC
From: rq17559@aol.com
Message-ID: <3jfpf8$6qa@newsbf02.news.aol.com>
Source record: 169986

I reposted this, because the price was posted incorrectly before and I
can't delete the message.

Falcon030 computer for sale:

4MB RAM
82MB internal IDE hard drive
mouse
Intel 14400bps external fax/modem

DEKA 2 PC keyboard interface w/ PC keyboard

Includes the following software:
Outside (virtual memory up to 512MB)
Lattice C 5.6
HiSoft BASIC 2.1
STraight Fax 2.1
ExtenDOS Pro
NVDI 2.5 & 3.01
Geneva
Neodesk 4
ST Format magazines w/ disks
ICD SCSI Pro Utilities
PhotoShow Pro 2.2
GFA Basic 3.5e

Games:
Virus by Rainbird
Dungeon Master
Frontier: Elite 2
Flight Simulator 2
Karateka
Ishar (Falcon version)

Selling for $625 including shipping within the continental US only (not
Alaska). Please respond via e-mail.

3829. IBM emulation on an ST

Newsgroup: comp.sys.atari.st
Date: 1995-03-06 20:10:59 UTC
From: gustavo@dent.uchicago.edu
Message-ID: <D51C2B.8H9@midway.uchicago.edu>
Source record: 169987

Hi,
I would greatly appreciate any information about running
non-windows IBM software on an ST. The FAQ mentions a hardware product
(whose mame escapes me at the moment), but does not give a a contact
address or phone number for its manufacturer or distributor, or any
idea of the cost involved. I have also heard of a software product
called PCDitto, and again, I have no info on availability or
pricing. Thanks in advance for any tips.

Gustavo

There is to be a new magazine launched in the UK. It will feature a lot of the old ST Review team, the magazine itself is called Atari World and is due for release in April.

This magazine is aimed to be a Future beater and from what I have gathered, it will be.

The magazine is, apparently, going to be Full Colour through out and be at least 128 pages with two 16 page supplements.

The Editor will be Vic Lennard, applause, and will feature a Falcon dedicated supplement each month.

Remember the magazine needs your support and input to win, so why not buy a copy in April.

Any more info will be posted here as and when I receive some.

If you ftp to: ftp.uni-kl.de
and cd to: pub/atari/falcon/text
and download: f_games_list.zip

you should recive a file which lists the ST games runnable on a Falcon and
detailed advice how to do it, whether it be with Backward or not.

For Civilisation it mentions newer patched versions which should run in
ST-Low without problems.

If you find this is wrong you can mail the compiler with corrections at:

higgi@yeti.faveve.uni.stuttgart.de

3844. Re: ATARI Works black page syndrome

Newsgroup: comp.sys.atari.st
Date: 1995-03-07 01:17:02 UTC
From: simon@bassland.demon.co.uk
Message-ID: <794539022snz@bassland.demon.co.uk>
Source record: 169913

Er, well actually I have Atari Works running with NVDI 3 on my Falcon, and I don't get the so called "Black Page" syndrome, which has been described in this thread. It works okay, but scrolling up and down a text file is sooooooo slooooow.

BTW It works fine with MTOS as well on my machine.......

P.S I'm thinking of getting either BlowUP or the Screen Blaster for my Falcon, which is the best? I'm going to be getting a 17" SVGA monitor.....soon.

Cheers.

3845. Persistance Of Vision.....

Newsgroup: comp.sys.atari.st
Date: 1995-03-07 01:28:10 UTC
From: simon@bassland.demon.co.uk
Message-ID: <794539690snz@bassland.demon.co.uk>
Source record: 169912

I've got POV that came on an early ST FORMAT, for use with my ST.
So what?...Well, I wondering what the latest version is, and does it run
on the Falcon? Is there a version that uses either the DSP or the
68882 FPU? On the ST it is slooooow. Does it support on screen
rendering like on the PC? The ST didn't, and there is isn't a reason
why the Falcon can't do it :)

Cheers.

P.S I'm thinking of getting either BlowUP or the Screen Blaster 2,
which is best? It will be for my (soon to be got) 17" SVGA monitor.
I'm looking for high resolutions, rather than colour richness.
Although 256 or 32,768 colours at 1000+ x 800+ resolution would be
perfect.

Cheers again :)

3846. Re: Translators..!!

Newsgroup: comp.sys.atari.st
Date: 1995-03-07 02:37:05 UTC
From: S.P.Taylor@bradford.ac.uk
Message-ID: <1995Mar7.023705.12743@bradford.ac.uk>
Source record: 169905

I have recently started to use Ruftrade, simply because its output is vastly more readable than any other translator program I have tried.

My only complaint is in the user interface. For my system, it would be better, and for other systems, certainly no worse, to have a simple TTP type program which took the input filename on its command line, and assumed the output filename to be a .RUF file if one is not specified.

As the interface stands, it is completely unfriendly to my MagiC environment - It messes the screen, and wil not multitask. I feel that it would be a simple task to put a new Interface around the excellent engine.

I have already registered the program, but am disappointed by the author's shareware policy. Instead of the usual "one-off" fee to register the program forever (or at least until it changes significantly), he states: "The current deal is that you may call for a further updated copy when you wish at no cost. Subsequent updates will cost you 5UKP a throw!"

I think this is unfair, and at least should have been mentioned before I registered - not that I regret doing so. I would rather pay twice that for a nortmal lifetime registration. Why is it fair that honest users who register their shareware end up paying a fortune for updates?

Steve Taylor.

Source record: 169921

>> the program is. Crippleware is a subdivision of the major category, whether
>> that be free or share.

> But how do you try a limit, before buy ?

The main point of Shareware as I see it is a program that is freely
distributable but that you pay for if you want to use it. "crippleware"
is shareware that has some things limited to encourage people to
register. It is important that the crippling does not remove the ability
to try out the program - with those sorts of crippling you might as
well not bother to freely distribute the program.

>It does matter, cause you kill the shareware idea by saying crippleware is
>shareware. The next thing we'll see is commercial beeing announce as shareware

I would love to live up to the shareware ideal and distribute non crippled
software, but it just doesn't work. I honestly believe that had I
released SuperSam as unrestricted instead of save disabled there would
have been _very_ few registrations if any. Certainly no international ones.
So, it has the save restriction. It is still shareware in my opinion because
the alternative is commercial, and that it certainly isn't. COmmercial implies
levels of support and backup I simply can't provide. You call it crippleware
I guess, but I won't do that because crippleware, like its root word,
cripple, has bad connations in English and has insinuations of being in
someway substandard or inferior.

Wow....what a lot of hot air. Looks like DOOM is very important to you.
I admit to have played it for a while, but the fad did die. Now, there's
a new one called "Heretic" or something like that....same perspective,
same graphics...different guns....I was tired of DOOM when II came out.
Doom has a greater appeal with the teenagers than with me. Incidentally,
there are other reasons (than DOOM) to which I would use a network, if I
had one.

Just because something is done lots of times ("with hundreds of PCs")
doesn't mean it's always the easiest, or even a great thing at all.
You're so BIASED and on such a high horse that you won't even concede
that DOS (and its component memory juggle, and CONFIG files) can be
difficult, as can the IRQ juggle. Hell, even the GURUS AT PC MAGAZINE
will attest to the fact that those aspects of the machine suck. To prove
this point (and to refute you, to boot), (1) Why has the Mac been so much
easier to network and interface??? Just plug in a little cable with 2
DINS and you're connected. Any FOOL can see that this is a better way,
and should look at the PC way in proper perspective....it's done...it can
work, but it can be a major pain in the ass....especially if there's a
sound card, scanner, network, etc. in there. (2) Why is there a move to
PCI? It's to get away from that. (3) Why is there a move to (finally)
dump DOS? (Win95, or Win96 or Win2000 or whatever) The answer to all
three of the questions is to overcome the
handicaps that the PC currently suffers with....yet you maintain that all
of the criticisms are untrue. You are way off base, man.

>
> >And you're probably not too concerned about making your system more
> >stable.
>
> You're 100% correct here.. I'm not concerned AT ALL with making it "more"
> stable since it's already completely stable..

Yeah....real stable...when I try to multitask two DOS applications (like
the PC Xformer....the Atari 8-bit emulator), every DOS box I've tried
tells me (upon hitting ALT-RETURN to "smash" it into a window) that I
can't run this in a window...and that I must run it full screen. Then it
displays a little window that's completely BLACK...not even displaying
anything....and this is running in a graphics mode SUPERIOR to that which
the application in questions runs in. (i.e. running 640x480x256 colors
or greater should be able to handle Atari 8-bit resolutions/colors)
Really stable, man! Windoze 3.0 called it's crashes "Unrecoverable
Application Errors". Windoze 3.1 comes out and says "no more UAEs!" as a
feature...it simply calls them "General Protection Faults." I've had
them happen many times. I've tried in vain to get MIDI files to play
correctly through a 16-bit sound card....and the applications always pop
up a dialog box tellling me that the sound "might not be right due to my
MIDI driver installed improperly." Of course, the MIDI driver was
installed properly....and re-installed the same way as the directions
said...still....same deal. REALLY STABLE!!!

>
> The only time I've had a "crash" in recent memory was when I was trying to
> compress a GIF file that I'd captured in a different resolution than it was
> originally.. apparently the compression program was trying to compress it in
> the original resolution and couldn't handle it.
>
> Other than that it keeps going, and going, and going...

Should you pat it on the back for going and going??? Perhaps in the days
of Univac....but I say it is to be expected of a modern computer. My
8-bit Atari keeps going and going and going....

>
> >with a Mac or Atari with some kind of boot manager it's _easy_ and fast

> bypass the AUTOEXEC and CONFIG files, install them selectively, or choose
> any of a number of alternative configurations you can easily set up.
>
> Does the Mac and Atari COME WITH a boot manager as you described...?

No....the Atari doesn't need it....because it doesn't juggle memory
around the 640K limit like your PC. "Easily set up" would mean that the
first time I run into a problem, a dialog box should pop up on the screen
(on a PC) which asks me if I would like to set up a boot manager, and
then I simply point and click as one is made. No, you have to dig
through the books and screw with CONFIG files to set one up. Easy? For
some people, maybe. I'm not saying it's difficult for me (as you
erroneously assumed previously), but your little sister should be able to
do it with a mouse and on-screen prompts. Unless you are *FAMILIAR* with
the system, it is not easy. Sure, it's easy for a seasoned DOS pro.
However, with all the PCs being sold, a LARGE portion of users are
getting their FIRST PCs, and it is those (not you or I) who simply CAN
NOT WRESTLE WITH MEMORY JUGGLERS AND CONFIG FILES!!!! When they buy
their Compaqs, they work as configured. When they buy Microsoft Flight
Simulator (which requires LIM Expanded memory emulation), how in the hell
are they going to know how to set up a boot manager, or juggle memory or
edit config files? They're going to have to learn, or call someone who
knows. That's the point....and the point is that it SUCKS.

>
> >Oh, so fast, especially if you're running OS/2.
>
> Which I do... any slowness in booting is easily overshadowed by the power of
> the other features of the operating system... and with version 3.0, even the
> booting is faster.

Slowness in booting is never "overshadowed." Slowness in booting sucks.
Slow booting is the most aggrevating wait that a PC can give. Perhaps
there is "power" (as you call it) to OS/2, but do not mix the issues.
"Power" (whatever that is) may be an advantage, but slowness in booting

is a disadvantage. If I was buying a car (like a Corvette) that has a lot of horsepower, there is still a disadvantage that it's hard to get in and out of the blasted thing with the little seats on the floor. Just because it has power, should one say that compensates for difficult ingress/egress, or admit that once you get in, it's powerful, but the issues are different?

> Sorry... you'll have to do better than that...
>

Oh please...must you resort to such childish provocation? Why don't you stick to the issues....and perhaps realize that your contentions about "what's easy and what's not" are WRONG. You (and I) may not be representative samples of the PC-buying population....as your father or little sister may buy one having never touched one before. In all your EGOCENTRISM, you overlook that fact....there are other people than YOU, who may find these tasks (memory juggling, CONFIG editing) confusing and foreign. This CERTAINLY does NOT mean that you are some sort of expert...yes lots of people (like me) can do it...no....that doesn't mean it's necessarily "easy." It's easy for me because I've been a computer hobbiest for years, as have you. What about for someone who doesn't know RAM from ROM? They can run a Macintosh.....but will run a PC with MUCH MORE DIFFICULTY. If you can't admit this, you'd be best off to get in the bathtub, draw a nice hot bath, and open a vein with a butcher knife. I'd even go so far as to say they could operate my "lowly" ST easier than a PC.

>
>
> (By the way.. for anyone new to all this, or who just can't seem to follow

> owner, I hate to see that happen, to ANYTHING, be it computers, cars or
> whatever. Saying PCs are crap is NOT going to make my STe any better than it
> is on its own merits...)

On the contrary, what other reason would you be here for? I have *YET* to see you post something informative or inquisitive about Atari computers. Am I unrealistic in my expectations of you to do such? I don't think so. The only misinformation is from YOU.....and your egocentric views on PC memory juggling and CONFIG file fixing. You maintain that the PC is easy to use, while Macintosh (based on its ease of use...which is closer to an ST than a PC) continues to sell, and the PC strives to be more like the Macintosh. Enjoy your individual ignorance.

James

<SNIP>

I picked up something called a 'Supercharger' made by a German
company about 3 years ago, it was second hand then. It was a box
that sits on the SCSI 'chain' (ie you can have hard disks connected
too) it had a V30 based processor and about 1 meg of RAM.

The good thing was that you could truly multi-task with it,
as it was a completely seperate computer, only 'borrowing' the ST's
monitor and keyboard. It had CGA and Herc graphics modes and
would run Windows 3.0.

Also the onboard 1MB RAM could be used as an ST ramdisk.

It handled DOS software fairly well, even things like Xenon2.

I'll find out who made it and where they are now, but I suspect that
they went out of business.

There were 'plug in' boards that used the ST's RAM, I think
these went up to '386, but it's been a long time.

Steve Hobley.

3858. Pentium, have a laugh!

Newsgroup: comp.sys.atari.st
Date: 1995-03-07 09:38:35 UTC
From: Rod@ivecoft.demon.co.uk
Message-ID: <794569115snz@ivecoft.demon.co.uk>
Source record: 169994

Hello all,
This was posted to a list server that I sub to. I thought you might also like to have a laugh! Thanks to Claudia.

Q&A: THE PENTIUM FDIV BUG

Q: How many Pentium designers does it take to screw in a light bulb?
A: 1.99904274017, but that's close enough for non-technical people.

Q: What do you get when you cross a Pentium PC with a research grant?
A: A mad scientist.

Q: What's another name for the "Intel Inside" sticker they put on Pentiums?
A: The warning label.

Q: What do you call a series of FDIV instructions on a Pentium?
A: Successive approximations.

Q: Complete the following word analogy: Add is to Subtract as Multiply is to:
1) Divide
2) ROUND
3) RANDOM
4) On a Pentium, all of the above
A: Number 4.

Q: What algorithm did Intel use in the Pentium's floating point divider?
A: "Life is like a box of chocolates." (Source: F. Gump of Intel)

Q: Why didn't Intel call the Pentium the 586?
A: Because they added 486 and 100 on the first Pentium and got 585.999983605.

Q: According to Intel, the Pentium conforms to the IEEE standards 754 and 854 for floating point arithmetic. If you fly in aircraft designed using a Pentium, what is the correct pronunciation of "IEEE"?
A: Aaaaaaaiiiiiiiiieeeeeeeeeeee!

TOP TEN NEW INTEL SLOGANS FOR THE PENTIUM

: assign.sys etc.
: Thanks for any help,
: Paul Luscher

If you did not purchase the original disks of NVDI with the falcon, then
you are breaking the law by using it. To configure it you need a program
on the installation disk which configures NVDI's internal switches for
mouse accelerator/GEMDOS accelerator/etc. The assign.sys is the same as for
an ST (unless you use speedo) except that fonts prefixed by an s are loaded as
system fonts inthat res by NVDI. I suggest you purchase a legal copy of NVDI
(its now at v3.0 with its own speedo).

There are no "official" compiled versions of POV for the Atari; you get
the source and compile it. As it happens, people have uploaded unofficial
binaries in various places, try atari.archive.

I have a 68030/68882 version, I compiled this with Lattice. If you can't
find it anywhere else let me know. It does not have a screen previewer.
For a preview to be of much use you have to run in True Colour, which means
the Falcon runs like a thing that doesn't run very fast. Or you use
a fixed palette in a lower-colour mode, and get a crap display.

Someone on CIX has done a DSP version, but hasn't distributed it yet. I'm
trying to get a copy at the moment, I'll let everyone know when it's released.

I tend to do draft renderings on the Falcon, but move to a Sun for
texturing and final rendering.

>P.S I'm thinking of getting either BlowUP or the Screen Blaster 2,
I have a BlowUp Hard 2 for sale, £35. Let me know...
I don't think there's much to choose between BU and SB, really. More UK
users seem to have the former.

>Although 256 or 32,768 colours at 1000+ x 800+ resolution would be perfect.
The Falcon bus does not have the bandwidth for 1000x800xTrueColour, I'm
afraid.

I tried yesterday to initialize a partition on my hard disk with MINIT.TTP in order to have a Minix file system for Mint.
But it refuses to initialize it ! As the size of my partition is 170Megs, I wonder if MinixFS can work beyond the 32Megs limit.
Any clue ?

Setup: MegaST4, PAK/3 68020-68882 16Mhz, TOS 2.06, ICD Advantage+, ICD drivers ver. 6.5.5 and a free disk (for Mint) of 170Megs (Quantum LPS170S)
and for the soft: MiNT 1.08 - 68030, GEM AES 4.1

3871. Wanted - ProTracker manual

Newsgroup: comp.sys.atari.st
Date: 1995-03-07 12:30:10 UTC
From: G.Ballantyne@compserv.gla.ac.UK
Message-ID: <8760.199503071225@lenzie.cent.gla.ac.uk>
Source record: 169966

Having looked at a demo version of ProTracker ST for the Atari STFM, I decided to register, not just for the latest version of the program, but mainly for the full manual and last year I sent off my fee to Karl Anders Oygard in Norway.
When the disks arrived three months later, I was disappointed to find that the text file holding the manual was damaged and unreadable and I promptly returned the disk for a replacement. To date, this request and several letters of enquiry have been ignored. So, if anyone has been more fortunate and has received the full manual, I would be grateful if they could contact me. Thanks. Glenn.

In article <H.eg.Ph894tRuf1E@semprini.waterloo-rdp.on.ca>,
Chris Herborth wrote:

]> PPC620 - 330 SPECint92
]> PPC604 - 225 SPECint92
]> PPC603 - 160 SPECint92
]> PPC602 - 50 SPECint92
]> PPC601 - 125 SPECint92
]These numbers are totally meaningless without a Mhz rating for the chip.
]A 60Mhz PPC601 gets about 60-61 SPECint92 (60Mhz Pentium gets about
]58-60). These are also "best-case" numbers; Pentium systems get
]anywhere from ~70-95% of the "best-case" SPECint numbers, depending on
]the system and how it's built.

I'm sorry, Chris, but I must disagree. The clock frequency of the
processor bears some relationship to the speed at which that processor will
execute a program, but when comparing one processor with another one, it is
irrelevant.
For example, what if processor1 had a divide-by-16 clock input circuit and ran
at 256MHz, and every instruction took 16 bus cycles, and processor2 ran at
20MHZ, had a divide-by-2 clock input circuit and did equivalent instructions
in one clock cycle? That would make processor2 ten times faster than
processor1 even though the "MHz rating" as you call it is over 10 times slower.
The whole point of SPECint92 and SPECfp92 ratings are to eliminate
these inconsistencies, and try to establish which processor executes a range of
general mathematical routines the fastest. The processors being tested are
obviously clocked at their maximum frequency.
The fact that they are best-case numbers is also irrelevant, since they
are best-case for every processor. If a processor cannot perform at as high
a percentage of "best-case" than another in general computation, then it is an
inferior processor, and the SPEC marks will show that.
The tests are not just 2 + 3 = ? and 2.12 + 3.13 = ?. They are the
average values of a whole range of algorithms, designed by people well
acquainted with measuring computer performance.

] A PowerPC-based Atari system running TOS would be about as fast as a TT,
] which would be totally pointless, unless the system could run AIX, or
] Windows NT, or MacOS. Given Atari's previous adherence to industry
] standards, you can bet it'd be TOS-only.

This comment of yours assumes that the PowerPC would be running
emulated 68000 code, as is the case on PowerMacs running a lot of System 7.
However, the core of System 7 has been recompiled into native PowerPC code, and
the rest of it is in the process of being recompiled (source: Electronics
Weekly about a year ago). Windows NT will be run on the powerPC, not emulating

80386 code, but recompiled to run natively. Why not TOS? Without doing any calculations, I would imagine a 330 SPECint92 PPC 620 would run emulated 68000 code significantly faster than a 68030 at 32MHz (Atari TT) anyway. The PowerPC RISC instruction set isn't *that* basic, you know.
Now assuming the authors of TOS and GEM didn't write all their operating system in assembly language (which is possible but unlikely - I've disassembled some of it, and if it was written in assembly language, then they weren't very good at it - it looks distinctly like compiler generated code), but rather in a sensible language like C, the process of recompiling on a PowerPC C compiler would be, if not trivial, no massive task, as long as the source code is well written.

] Using such a system would be a
] massive waste of computing power; the operating system and 100% of
] applications (with the possible exception of Papyrus, Connect, GEM-View
] and the dozen other apps that are still getting work done on them) would
] be run in emulation like a snappy 25Mhz 68LC040 instead of a screaming
] PowerPC-whatever.

What's wrong with wasting computing power? One reason PowerPC is a good processor is that it is cheap to make. Otherwise we'd all have DEC Alpha's in our PCs. And so what if all the old software ran in emulation, even as slow as you say? If it was good on a 8MHz 68000, I'm sure it'll still be good on a "snappy 25Mhz 68LC040". New software can be recompiled, old software can be emulated. Afterall, most pentiums are probably still running 8086 software applications spawned from Windows. That's no reason not to have a pentium, there are plenty of other far more important reasons :-)

3873. Tif Compressed ?

Newsgroup: comp.sys.atari.st
Date: 1995-03-07 13:50:15 UTC
From: hlazar@netaxs.com
Message-ID: <3jhoan$8em@netaxs.com>
Source record: 169970

This is continuation of a problem I had a friend post about a
week ago. The problem is Desk Gallery, a 3 CD CD-ROM with 30,000 images
in compressed TIF.
Gem View (registered), Imagecopy 3.5 (bought), and ST Convert (bought
will not touch those images. The only way I can use those images is with
a friend's IBM (ugh).
Another CD-ROM, Corell Gallery came with images in BMF format
which I was told was converted Unix files.
I can live without these discs, but it seems a waste of money.
Is there any suggestions on finding a way to convert those images
to useful form on my Atari.
Thanks to anyone who replies.

>... it seems to me that you don't consider the TT030 or the Falcon030 to
>be ST computers. Why?

Well, for one thing, Atari themselves make the distinction with their model
names...

The ST line was the 68000 based "16/32 bit" computer.. the TT030 was quite
a departure from that design, even though it can run most ST software in its
"ST RAM". The Falcon030 was even further removed from the original ST line,
although it too can run ST software through its "ST emulation".. it's really
a much different design, and far more powerful in a basic sense, not just
an incremental improvement on earler STs.

I'd say they're all "close cousins", but not in the same family...

PC Ditto is a one disk PC Emulator, but you do need a DOS boot disk, or
DOS harddisk partition. It's v-e-r-y s-l-o-w, but you should be able to
get it at next to nothing. It's entirely a software emulator, and I'm
sure some people must be dieing to get rid of it...
I managed to get PC Xenon II working on it! It was in CGA black and
white, and it was so slow that you could watch the screen being redrawn
each frame!

Don't talk bollocks. When a WWW server fields you a page, it sends you
the HTML source for the page. You then have to parse the text and format
it propropriately (it's similar to the source for an ST-Guide hypertext).

Erlend Nagel has just showed that he couldn't find his own arse with both
hands & a map......

>Atari computers.

Sigh.. James, you have just demonstrated to me and everyone else reading your tiresome divel, that you simply cannot read.. or that you have real problems with reading comprehension.. I really don't care which it is.

Since you seem incapable of reading and comprehending what you see here in these newsgroups, I guess I'll simply stop answering your questions about memory expansion for your 520ST or your questions about the different models of Atari computers and how they compare to various Amiga models.

There are other people with questions who can read and understand, and I'll just help them and let you wander off in your own misguided way.

By the way, don't bother to request the list of CD-ROMs that can be used on Atari computers that I offered to the newsgroup a few days ago... you probably couldn't read it anyway.

You call yourself a computer hobbyist, and yet you don't seem to be able to understand that computers are above all *fun*... all computers...

Maybe you need a different, less demanding, hobby..?

Goodbye, James...

>Dan this seems to be a Big problem with Germany, Germans seem to think
>that Germany = the World and every one speeks German...

The doc's in question HAVE been converted into English, but I think that isn't the point. I worked it out from the original german docs, and I think that in the interest of international unity we should all:

a) Make an effort to learn other languages and not expect everyone to speak english.

b) Tell Roger Sheppard to shut the f*ck up, ignorant pillock that he is....

>Come on you Germans if you wish others to use and accept your standards
>Please post them in a Language that most people in the World can understand..

See option b) above...

>* R. W. Sheppard Internet sheppard_r@kosmos.wcc.govt.nz *

If a German guy was to say that about the docs in my programs, I'd tell him to find someone who speaks english to translate it for him. I would expect the same to apply to german docs (ie. don't winge at the authors, find someone who's willing to translate if you cann't do it yourself, or get a book on german language).

Of course, non of this applies to the french - bloody garlic eaters ;)

Craig.

|> -Andrew

I don't know. I don't believe they're doing anything illegal, just that they're pissing customers around because they have what you want. It's most certainly an attitude problem. Mind you, I'm not sure about the practice of advertising things that aren't made anymore, let alone out of stock. That is just infuriating. At least Compo indicate that TTs and MegaSTEs are only _sometimes_ available, and to call for latest details like pricing.

Last time I looked at one of Gasteiner's adverts - 10 quid for an RF lead. Get real !
I heard they started selling Macs. Well, they still won't last long the way they're going now.

>opinion universal. Stop treating opinion as fact.

I wan't trying to. But as an user of any kind of software, i thought my
interest and opinion could be of an interest to the programmers, but i
guess they just don't give a damn. Perhaps thats why they can't make their
livings.

It does. All users are free to read the doc's following the archives before
downloading the files. If the doc's isn't telling enough, then it's the
programmers fault.

>a nortmal lifetime registration. Why is it fair that honest users who
>register their shareware end up paying a fortune for updates?

Well, I can understand your feelings, but perhaps you need to reconsider
this from the author's point of view.

For your initial shareware registration fee, you get legal access to the
program plus one free update at any time. That is a better deal than you
get from any commercial software that I know of. And remember, shareware
generally _is_ commercial software; it's just distributed differently.

The author needs _some_ incentive to continue developing and enhancing
the program as do commercial vendors. He/she has put considerable time
and effort into the first version; updates require a lot of time, too.
It's only fair to reward the author for this time and effort spent,
especially when the updates are reasonably priced. 5UKP... what's that?
About US$7.50 or so (sorry, I'm not current on exchange rates). And does
this include in-country postal costs? Sounds pretty fair to me.

Understand, however, that I'm not talking about 'bug fixes.' That's a
different story and should generally be provided free of charge, IMHO.

3893. Disk info

Newsgroup: comp.sys.atari.st
Date: 1995-03-07 16:15:00 UTC
From: gary.ratliff@starnetbbs.com
Message-ID: <9503071754485462@starnetbbs.com>
Source record: 169837

As my GNU Chess disk (BRE #1725) went belly up and I had forgotten to make a backup I was exploring that disk and others using Dr. Floppy.

Now I know that the CP/M method of direct track and sector editing is well documentated and easily done with DU or the kaypro XAMN or ZPATCH etc.

My experiments showed me that I did not have any information to try to follow the path of a corrupt file or read the disk signature on track 0 sector 1. The directory area was obvious but any concept of group data which would provide a clue.

My experiment continued and I extracted the theory that if EB 34 it is an IBM PC fformatted disk. (That one can read diretly MSDOS 3.3 or MSDOS 5.0 etc makes this a perty sound theory) If the same area displays a large cluster of N's (as viewed by the Dr. Floppy) this is an Atari Formatted disk.

Further if the directory track begins on track 1 sector 3 it is a single sided format and if the directory begins elsewhere it is a 720k double ided format using Atari formatting.

Is there a FAQ aboutr this. And other info about learning how to interpret the info.

Gary.

So you are having problems hooking up your scsi drive to your Falcon. I had the very same problem that you are having. No matter what I tried I could not get the Atari Harddrive utilities to get my scsi drive hooked up. I had to take my Falcon down to my dealer and they used, I think ICD Hard Drive utilities(a commercial program) to get my Falcon to format and partition my Hard Drive. After that was done then I was able to boot my Harddrive with Atari Harddisk driver and have that Harddrive Icon on the desk top. Sounds to me that you will have to go through the same trouble. A pain, but I do not see any other choice. Atari Hard drive Utilities are clearly not as good as the commercial ones out there. If you have to buy the ICD utilities, major pain, I know, I think it is 50 US.

3895. Atari ST Games for Sale

Newsgroup: comp.sys.atari.st

Hi- I have the following original ST games w/ docs for sale. $7/each
includes USA shipping . . .

Sierra Strategic Simulations, Inc
------ --------------------------
King's Quest Demon's Winter
Man Hunter Phantasie III
Spacequest II Rings of Zilfin
Ultima II Roadwar 2000
Stellar Crusade

RainBird Psygnosis
-------- ---------
Black Lamp Barbarian
Carrier Command Obliterator
Elite
Space Cutter
Starglider

Miscellaneous Authors

Day of the Viper (Accolade) Sim/Adventure
Captain Blood (Mindscape) Sim/Adventure
Leviathan (Thunder Mt) Sim/Adventure
Alternate Reality (Datasoft) Role Play/Advent
Alien Syndrome (Sega) Action
Artura (Arcadia) Role Play/Advent
Last Duel (Capcom) Action/Sim
Universe III (Omnitrend) Role Play/Advent
Tau Ceti (Thunder Mt) Role Play/Advent
Side Arms (Capcom) Adventurish?
Shadowgate (ICOM)
S.D.I. (Master Design) Role Play/Advent
Renegade (Taito) Action
Rambo III (Taito) Action
Star Ray (Logotron) RP/A

Thanx! Offers also accepted for multiple purchases . . .

3896. About Rufftrade

: >Finally comes the Falcon. (I can't wait to get my hands on one of
: >these!) Then I see (towards the end of the Commodore regime) an Amiga
: >1200, which looks to me like a Falcon-wanna-be. Was it?

It is quite possible for Atari to sell the Falcon at a much lower
price. Its just that they can't market products. If for example Atari
had a 4mb machine (no HD) on sale for #399 with some games and
floppy disk based APP's. It would do quite well. Then like the
Amiga for your #549 you get a built in IDE HD drive.

The machine was FAR too highly priced for any high street store
to stock it! At the end of the day this is about the ONLY way
buyers will buy, lets face it would you spend #800 on a machine
you have never seen? We may not all have used an xyz.brand PC but
if it says 486 with SVGA etc, then its likely to be fairly similar to
one I have seen or used elsewhere.

A more powerful machine at a similar price. It could have blown the
Amiga 1200 away. Still it's too late now.

>
>Do Chimera executables exist? The distribution I found only had sources. I'd
>like binaries for a 1040STe running mint 1.12, and Mint X, as well as mintnet.

They are at phlem.ph.kcl.ac.uk - that's where I got them.

BTW, for anyone who uses Chimera:

Has anyone got delayed image loading to work? It seems to start off OK,
ie. icons for images - when I click an image icon it LOADS the appropriate
image, it then redraws the display but the image is still an icon. If
I don't set delayloads all images are fine (I figured out that the b
flag in UNIXMODE must be set to get local (file:) html files to display
images.

Also the external stuff doesn't work for me at all. I have created a
.mailcap and .mime.types file, put it in my home directory, set up the
proper X resources to find these files (I even check with Mint Debug level
2 to make sure Chimera reads these files - quite a pain in the ass with
X since the screen scrools like crazy and every keyboard press to a
shell window generates LOTS of events). It seems to get as far as
trying to set the PATH variable with a semicolon for another command - there
was some warning about this in README.hints I think. Anyway it just doesn't
work. Another thing I've figured out (from the debug level) is that for
external images to find the /tmp directory you must set the TEMP env variable
to point to /tmp. It will try to use the current directory otherwise and
I usually run it from an FVWM menu so the cwd is '/' which you cannot
write to! If anyone has any info/experience on this let me know!
(e-mail preferred) I am very curious about the external thing and it
doesn't work if the parent shell is either tcsh or sh - very strange.
I have a feeling the delayed image load and external view are caused
by the same problem/setting.

Thanks,
SAm

3901. FTP site for TOS v1.00

It is not public domain, and you may not legally download it anywhere. You may be able to find someone who has a legit disk of it and will sell it, though.

Next silly question - WHY on Earth would anyone WANT TOS 1?

Until you want to run something that didn't come pre-isntalled on the hard
drive, yes.

B> By the way, have you ever had to explain to someone why their Atari ST
B> won't boot because an AUTO file program is in the wrong order..?

Sure. But the difference is, you can remove _everything_ from the AUTO folder,
and the ST will boot up. Try removing the CONFIG.SYS and AUTOEXEC.BAT and then
run MS-Windows. Or a hard drive with more than 1014 tracks, for that matter,
if you don't have VLB support on the motherboard.

B> It seems computers are computers, no matter what brand name is on the
B> outside of the case...

And automobiles are automobiles. However, if I have to live in one for a very
long time, I would prefer the luxury of a Rolls-Royce Silver Shadow to the
cramped cockpit of a Morris Minor. And, IMHO, the
Intel chips are NOT the equivalent of a Rolls.

Yes it can
Try setting up a V2 file system, as I had a similar problem where a 128 Meg partition was set up to only 16 Meg without specifying this.
I also decides to tell it the drive parameters, just to be sure.

When using my ST before getting MagiC, I would never have been without UIS III. It did absolutely everything (excepty program launching - something I always missed, but then no fileselector has this).

UIS does: Attribute changing of a batch of selected files
Batch renaming
Printouts of directories
PRINTING or VIEWING of text files.
And I don't think Selectric/Boxkite/Freedom do any of these.

When I got MagiC, and therefore the ability to use text viewers and the desktop without quitting my current application, I ditched UIS III, and managed just using the built in fileselector. This had one disability - it was not in a window, so copying/renaming/moving/foldermaking/formatting etc. were not available IN THE FILESELECTOR, however they were available in the application so this was not a big problem.

However, yesterday I tried both Boxkite and Freedom, and whilst both are nice replacements, I decided Freedom was the one for me, as it is brilliant in a Multitasking environment.

Is it just a shareware restriction that I cannot enter a new filename in the Freedom fileselector? I have not read the docs, so I am unsure. I can select any existing file, but not enter the name of a new one (e.g. when saving a newly created file).

Steve Taylor.

The only probem I have with this is, why do you initially pay 5UKP for _2_
versions, and then 5UKP for 1 version, in future? Perhaps every subsequent
5UKP should entitle you to 2 versions? Just a thought...

I agree that this is not too much.

: And remember, shareware
: generally _is_ commercial software; it's just distributed differently.

No it's not. I know this was how it was supposed to be. But in actual
fact, most so-called shareware is just the author jumping on the
bandwagon.

It should have been P.D. But P.D. does not seem to exist any more.

I know there are many pieces of high quality software out there
distributed as shareware - I have registered many of them.

But as for some offerings, the most the should ask, in all consciousness,
is 'Send me whatever you think this program is worth to you'
which is in all cases fair.

Steve Taylor.

>(like myself) are simply waiting untill the bug's are fixed.
>So again, it doesn't show a thing!

I blame them. If they keep downloading each new release, it sure
sounds like they are using the program. If they are using the
program, they should register it. At the very least, people like
yourself should email the author with a bug report and then
register it when the bug is fixed. Many programs have bugs that
are fixed in later releases, but are still quite usable even
with the bug.

If more people registered shareware, you would see more new
releases containing enhancements, not bug fixes. There would
be more incentive for the author to add more features to
the program.

: save them back out as standard MOD format...

Hmm. I had never actually managed to get a hold of Esion when I was first
told of it. In any event, I do remember that Audio Sculpture, also, is able
to load TCB MODs and save them as regular MODules. But generally speaking,
TCB Tracker MODules do not conform to the 'normal' MOD standard. (A rule
broken several times over on the PC platform, unfortunately ...)

3917. Sale: Odd ST Hardware Bits

Newsgroup: comp.sys.atari.st
Date: 1995-03-07 20:49:39 UTC
From: gbernath@oucsace.cs.ohiou.edu
Message-ID: <D538lr.933@boss.cs.ohiou.edu>
Source record: 169831

When I say it's all gotta go, I mean it. I've lowered prices, but if you still don't like 'em, make an offer. I promise, I won't be insulted by low offers. If I don't sell this stuff soon, it goes out on the curb.

Atari SM147 monitor - $50
14" flat screen monochrome monitor, no internal speaker. Slight distortion around upper left corner, but when I say "slight", I mean "slight". Only used a few hundred hours.

Monitor Master and mini-speakers - $20
Allows push button switching between color and mono monitors. Has an output jack for the speakers, which are are Labtec CS-150's (use 2 "C" batteries each, not included).

Free to a good home (whoever will cover postage):

Atari joystick (2600 style)
GFA Basic 2.0 Users' Manual
GFA Basic Programmers Reference Guide Vol. 1

Has anybody got any of these ST games they want to sell or swap.

Oids (old game by FTL of Dungeon Master fame)
Alernate Reality (even older rpg)
Panza Kickboxing (I had a version of this game ages ago but it was
the French version)

Please email me if you have any of them.

IT'S GOING FAST FOLKS! I have removed all sold items from this list.
Updated 3-7-95!
MOST ITEMS I WILL SHIP UPS C.O.D.

For Sale. MAKE OFFERS FOR ALL OR PARTS!!!!

HARD WARE

Atari Mega ST2 upgraded to 4 megs with Z-Ram upgrade
TOS 1.04 with PC Ditto II [PC hardware emulator] installed internally
SC1224 color monitor
SM124 mono monitor
Original boxes for computer and monitors
Monitor Master
[I will sell both monitors together for $150.00 and throw in the Monitor
Master switch box. As with all other items, you pay shipping.]
PC Ditto II installed internally with above computer, or I can remove
for installation into yourown computer
Spectre GCR with Roms and version 3.0 software [MACINTOSH PLUS
EMULATOR!]
VideoKey [Allow audio/video connections to a t.v. monitor in low and
medium rez modes]
Discovery Cartridge [From Happy Computers. Excellent software backup
device and has many other uses]
IB 5 1/4 inch drive
MFD 1080 drive [3 1/2 drive works, the 5 1/4 drive non-functional
and has been removed]

APPLICATIONS SOFTWARE

Multi-TOS [Multi-tasking on your ST compatible computer]
DC Desktop
DC Utilities
Hypercard Developers Kit [For Mac or Spectre GCR users]
WordPerfect ST [Last version developed by WordPerfect]
Wordflair II
Regent Word II
TV Title 2.0
PC-Ditto [PC software emulator, slow but very compatible. Good for
occasional or emergency
uses.]

GAME SOFTWARE

Purple Saturn Day
Impossible Mission 2

Championship Wrestling
Knight Orc
World Games
The Pawn
Guild of Thieves
Sinbad and the Throne of the Falcon
Rocket Ranger
The King of Chicago
Battle Chess
Midi Maze
Shufflepuck Cafe
Xenon 2 -- Megablast
Final Assault
Mean 18
Blackjack 3
Jinxter
Pac-Land
The Crimson Crown
Transylvania
Questprobe -- Spiderman
Superbike Challenge
Super Kidgrid
Thundercats

Plus the following compilation packages:

Precious Metal includes:
Arkanoid Revenge Of Doh, Captain Blood, Xenon, Super Hang-On

Triad includes:
Starglider, Defender of the Crown, Barbarian
Magnum 4 includes:
Batman, After Burner, Operation Wolf, Double Dragon

Microdeal Hot Disks Volume 1 includes:
Goldrunner, Jupiter Probe, Karate Kid II, Slaygon

The Story So Far Volume 1 includes:
Beyond The Ice Palace, Buggy Boy, Ikari Warriors, and
Battleships

Mega Pack includes:
Winter Olympiad 88, Mouse Trap, Plutos, Blood Fever, Seconds
Out, Frost Byte

5 Star includes:
Barbarian, Crazy Cars, Enduro Racer, Wizball, Rampage

Action ST includes:
Deflektor, Northstar, Trailblazer, 3D Galax, Masters of the
Universe

Giants Collection includes:
Out Run, Gauntlet II, 1943, Street Fighter

Didn't I hear you say:

"Aloha! We use Atari STs for music programming workstations and its does a great job in puting out the hits!"

Although I use a Mac for most everything else (requiring a computer), my two Atari's never fail to deliver solid MIDI performance! You can't beat 'em (except with a stick... which I don't recommend.)

I use the Falcon 030 with Cubase Audio and the Falcon Digital Interface straight to a Fostex D-10 DAT... it's heaven!!! No plans to leave the Atari realm for MIDI.

Keep on jammin'!

Anyone out there have a NEC CDR-83J SCSI single-speed CDROM connected to their ST? Is there any reason why this unit would not work, given an ICD host adaptor and ExtendDOS? I have an opportunity to purchase one for $60 used, but all I know about it is the model number. Does it require a CD caddy, or does it have a tray? Any comments would be appreciated.

Please email replies directly to me. I'll post a summary. Thanks in advance.

I'll confuse you now by saying that my house is in Birmingham! I've been working in London since December and pop back for a couple of days each week.

Not sure if I know anywhere that's cheap/free as you suggested earlier. The old Birmingham User Group venue by the Bull Ring springs to mind and seems a convenient location. I'm not sure of cost/availability etc. I may be able to check next Sunday/Monday.

> I don't plan to have the meet in Manchester anyway, or even London...
> if there is a meet.

It's not a bad idea although it might be something that's better tacked on to the Atari shows (if they're still continuing). I'd be prepared to put up a few people in Brum, if I haven't sold my house in the meantime!

FX: what have I let myself in for.

>perfectly. Please let me know if there is no chance or if you have
>gotten it working find. Thanx!

I've had it up and running on a site. It seems to work fine except that the handling of NNTP was not quite up to the spec that INN (which my provider runs) expects. I did manage to patch by hand a version to work with this. If anyone out there wants to fix things themselves, ka9q NOS/DIS uses the IHAVE NNTP command rather than the POST command to post messages. This is restricted in INN (for security reasons) to full feeds, not those running like a remote newsreader. Also for NNTP to run correctly make sure that your clock is set right and that you have a useful TZ env-variable. Everything else seemed to work okay. Why I didn't end up using it is that there is no support for POPMail or any other remote mail-collection protocols.

If all this doesn't mean anything to you, don't panic. Try it first and then mail me if you are having anything resembling the above problems. I may be able to help!

Cheers,
John

3955. Mint Minix Confusion

Newsgroup: comp.sys.atari.st
Date: 1995-03-08 09:35:45 UTC
From: zap@eskimo.com
Message-ID: <D547zL.K0u@eskimo.com>
Source record: 169944

I guess I am a bit dense but what is the difference between mint and minix? I see posts from people setting up minix partitions and are running mint but I don't understand. Do I need both mint and minix or will they run by themselves? I would like to emulate a linux system and use a bourne shell preferably bash as that is what I use as a host. What do I need to accomplish this task? I have a STE w/4 megs tos 1.06 and a small hd. I just installed geneva and neodesk4 and noticed a prompt in neodesk regarding mint. I am still getting familiar with the package. Any help and information would be appreciated.

On an unrelated note, I was browsing system information and found I was running GemDos ver 0.15 and Gem ver 4. That is the first time I was aware of those particular items. Do those version numbers change within certain tos groups or do they simply change with the new tos version? Just curious...

3956. Weird HD problem

Newsgroup: comp.sys.atari.st
Date: 1995-03-08 09:36:11 UTC
From: mattk@netcom.com
Message-ID: <mattkD5480B.96L@netcom.com>
Source record: 169945

Hi all...

Lately I managed to "create" a weird HD problem. Not totally sure how I did it...probably I was removing or inserting the HD cable into my STFM while the controller card still had power. The controller is an ICD Adscsi Plus....

Here's the sequence. The reason I removed the cable was to play a game that doesn't like the HD to be attached. Once I reattached it (improperly, most likely), the computer would boot for a bit, get to the HD, and then throw somewhere between 8 to 14 bombs on the screen. I couldn't get it to come alive (this was last night). This morning, I fired up the system and it came right up. I had it sitting on for the whole day. When I hit control-alt-delete to reboot it, I got the bombing situation as before. Then, after a few hours, I fired up the system and it came right up. Then, I crashed Mint. Hit reset, and again I am in bomb land. That's where it stands now...presumable after some time has passed, it'll boot up just fine. But, no matter how long it was on (8 hours, 20 minutes, 2 hours), hitting reset causes the controller to lock up.

I took disconnected power from the HD and it still died. Disconnected the controller, and it booted up. I had the controller completely disconnected from the HD, but with power to the controller, and bombs. I reseated the chips on the controller, which did nothing.

Any suggestions?

Matt

3957. CPM on atari

Newsgroup: comp.sys.atari.st
Date: 1995-03-08 10:42:40 UTC
From: tkk@uclink2.berkeley.edu
Message-ID: <3jk1n0$c39@agate.berkeley.edu>
Source record: 169948
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Has anyone had any experience running CPM on the Atari 1040? A friend of mine has a Synergy(pre-MIDI) keyboard which can be controlled by CPM programs, and he's trying to use the Atari CPM emulation program. Does the CPM emulation on the Atari useful? work?

Specifically, is it possible to use the RS232 port under CPM emulation?

thanks
tkk@uclink2.berkeley.edu

The CP/M emulator on the Atari ST *does* work, but it's not
a really easy thing to get going...

There are CP/M terminal programs which will work under
the ST CP/M emulator, so I do know that the RS-232 port
is accessible. (I finally managed to get one working so
I could directly download CP/M programs instead of having
to go through the conversion process from ST disk format).

I should look to be sure I still have it available before
promising it, but years ago I wrote up a text file on how
to get the CP/M emulator working... If I can find it, and
you think it might be helpful to your friend, I could
e-mail you a copy.

Just to add some more confusion:

I am able to use HSMOD04 with MiNT 1.12 and Mintnet 0.70. I recompiled
tip (with SozobonX and Mintlibs pl44) so that it uses RTS/CTS and 19K2
by default. The connection is easily established and I get fast
ftp-connections (1.6 K/sec on average). By the way I load hsmod BEFORE
MiNT (as prescribed by the MintNet installation manual)
Oh by the way the slattach program will automatically put the tty
(/dev/ttya, I use Mintos) in RTS/CTS mode if you hadn't done so already.

MiNT is a Multitasking OS, whereas Minix is aUnix OS clone. In the
context you are talking about, people set up Minix filesystems for
MiNT. This means that they use a disk structure like the one that
Minix uses, to be used under MiNT, as compared to the TOS disk
structure. (Someone correct me if I am wrong).

The Minix filesystem has advantages over TOS file system...in that it
is faster, and gives you the ability for longer filenames, as compared
to 8+3.

However, TOS and Minix Filesystems are not compatible with each other,
and to make use of the Minix FS, you will need to be running MiNT,
MultiTOS, or Minix.

The FTP server is down at the moment at phlem (& phlim). The reason
is we've just upgraded the SGI machines that host the disk the FTP
archive is on, and SGI didn't include a version of NFS that allows
you to export disks... The machines can import disks fine. So neither
phlem nor phlim can read the disk, so you can't see anything when you
ftp in. Sorry - we're hoping to get it back online ASAP.

Basically we've just spent #60,000 on 2 X terminals. The phone call
after lunch is going to be interesting :-)

Well, Apex Media can handle quite a few differnrt formats, though not
quite as many as you're after (And I guess it's a little expensive for
what you're after!).

For pure conversion, you could try the Shareware GemView or the Commercial
ImageCopy 3.5 (about 30 UKP)... they both do an excellent job and they
both handle a huge range of formats...

Or, of course, you could try TruePaint from HiSoft (about 40 UKP) - that
has a lot of import and export modules, as well as being a Paint Package
(though nowhere near as good as Apex - I even prefered using Degas Elite
on the ST than TruePaint!!).

>someway substandard or inferior.
>

Okay Dan.. Let me see if i get this right. You all agree that shareware
should have been unlimited, but due to low registration you have implented a
few limits. And because you don't like the word Cripple, you say it's still
shareware.

Basicly there is no such thing as real shareware any longer, (according to alot
of people here). Where does this put the honest people ? I know Hutch would
probably say, that honest people don't care. But my opinion is, that they do
care wether or not they can test the software.

What i don't like about this, is the obligation a user have, when he is testing
a shareware program.
According to shareware rules, you pay the fee after used it for a while, and
if you find future use of it, (we all agree upon that i hope). When crippling
a program, i would say you as an programmer overrule the normal shareware
rules, and therefore can't put any obligationes the users any longer, (you
have already put in a limit), but still you stay at the shareware definition,
which then means, the users end up with a limited program, and still the
same obligation. Thats not fair, and specially not fair to a honest user.

Why i want you to use the crippleware name insted, is simply because there
is no rules for crippleware, (If you like you can use another name such as
BetterWare insted. Thats not important), and then you can still stick to
the limits in your programs.

A> for the Ste series. If anyone knows something about it, please drop me
A> mail.

Yupp, here it is!

EPSS plays 4-8 channels of sound (8-bit, 50KHz) on a standard
STE/Falcon and 16 channels on a TT. It handles standard midi files, midi
information and can work in the background on sequensers like Cubase,
Notator (it only slows down the screen redraws).

You can contact the distrubitor Copson DATA on:

Conny Pettersson
Copson DATA
Hovetorpsgatan 66

I used the shareware release v2.0 and was considering registering.
This sounds bad. Perhaps Karl ought to arrange some sort of registration
system for UK users like Joe Connor handles fees for Kandinsky etc.

S.Lai

P.S. I heard somewhere that there is ProTracker v3.0 now (I think it was
in the Octalyser STE manual... Tord Jansson bashing ProTracker or something !)

3979. Re: crippleware - how crippled?

I know.. And it's not "nag" box's and save disable features i'm talking
about here, (well, disabled save funktions could become a problem, as
well as an "nag" box. I could give you a few examples, but there shouldn't
be a reason for this).
It's simply a principal matter. If you limit a program call it whatever you
want, just not shareware. Infact, the best name i could think of right now
is a demo. (Now i will probably be hang by alot of people in here 8-)).

I don't know if it was written to take that into account, but IDE
drives were never around on the ST scene at the time of PC-Ditto.

7 What are extensions, and where do I get them from

8 Recommended programs - commercial & shareware

9 Miscellaneous section

---

1. What is STOS ?

Written by Francois Lionet and Constantin Sotiroupolous (Spelling please?)

Published by Mandarin/Europress Software

STOS is the forerunner to the Amiga version, AMOS, AMOS Pro etc..
And its a great shame that STOS hasn't been supported by Mandarin since they released AMOS Pro because there are a lot of people who use their language and get frustrated because they can't call for help!

Mark Montreuil came up with this definition ......

STOS (for ST Operating System) is a programming language based on BASIC (Beginner's All-purpose Symbolic Instruction Code), that makes creating sound, graphics and movement on the Atari 16/32 bit line of computers as painless as possible. STOS has commands that handle input/output, animation, music, logic and program execution in an easy to understand way. A STOS programmer can spend more time on actual game design than on the "fiddly bits".

Many things that were not considered possible, such as changing screen resolutions in the middle of a program or writing Arcade-type games in a BASIC language, are a reality with STOS. Hundreds of quality games, demoes, utilities and educational packages have already been written in STOS.

STOS is a full-featured software development tool. Using STOS, art screens created in specialized paint packages, like Degas, Neo or Crack Art, can be easily used to create basic game graphics. STOS has built-in Sprite, Music, Map, Font and Sound effects generators. You can write some code, and, at a keypress, call up any of the added utilities (called accessories) to work on added features. You can even write your own accesssories, to use at any time.

Machine-code routines can be called from within STOS, and new commands (called extensions), can be written to enhance STOS's functionality. Some extensions that are currently available include 3D, the Missing Link and Misty (see Extensions for further information).

All in all, STOS is the perfect tool to bring your game ideas to reality without having to trudge through reams of machine code!

Cheers Mark for the few above lines on STOS. Anyone else fancy adding more to it ??

---

2. Where do I get hold of it ?

Has been given away with magazine cover disks, ST Format and ST User (I need a list of which ones!). The problem with the versions given away with the magazines is that they were no manuals.

Also most mail-order firms should stock a copy of STOS. Try to haggle and get some decent prices. Don't buy the Interpreter without buying the Compiler !

Apparently every ST sold in Britain comes free with a copy of STOS with the manual thrown in. Any more information on *exactly* you get would be appreciated. If you have the spare money and you want an extra development machine, then it maybe worth getting hold of one ?

()rm has suggested that you look at bargain buckets in computer shops or check out the odd car-boot sale. But that is ()rms sense of humour !!

---

3. What is it like to program ?

()rm says .....

STOS is BASIC, but a powerful version of BASIC. It has built in sprite handling routines, music commands, sound effects and numerous other routines, functions and commands which can be very useful.

At first glance STOS looks horrible, but after a few weeks of programming it, you will wonder how you ever lived life without it (OK, not the truth, but it IS good for something!)

As STOS is based on BASIC, it is very easy to program, in fact, I'd go so far as saying STOS is the easiest BASIC to write anything in. Everything can be set up very easily, for example, you want to play a sample yeah? Get the sample player extension, whack it in the STOS folder and then re-boot.

(Or for those lucky hard-drive owners, unlike ()rm, copy all the extensions into your STOS folder and leave them there !!)

Now play your sample with the command SAMPLAY.. No need to load routines into a memory bank, peek and poke a few numbers and call it. This is one of the nice things about STOS, its upgradeability..

Pity that the language hasn't been given a major rehaul with all these new functions BUILT IN.

Andrei has this to say on the matter ....

When STOS was designed, it was made to make writing games easy. The programmer would think mostly on the WHAT, rather than the HOW. In other words, it was supposed to make you able tp program games without having to think about how

tyour ST works. For example, sprites could easily be displayed, moved, and animated with ease. Unfortunately STOS sprites tended to be a bit slow, but The Missing Link extension replaces STOS sprites with Bobs. Bobs are a bit more tricky to implement (you have to move and animate and erase them yourself), but they are much faster than STOS sprites. There is a similar story for other aspects of the language.

STOS is a BASIC that uses line-numbers. This tends to be messy and often encourages programmers to write "Sphaghetti code" (There are gotos running all over the place). It would have been better if STOS had no line numbers, but would call procedures by their names, and have one command per line which was indented appropriately.

---

4. What extras are available to compliment it ?

STOS Compiler - Actually makes your programs faster (HAHAH!)

STOS Maestro - Sample playback routines for STOS (and sampling hardware depending on which version you buy).

STOS 3D - Add 3D commands to your games. Only drawback is that all the objects have to be loaded from disk each time they are required.

STOS Tracker - Playback tracker tunes, albiet a bit slowley..

Andrei has added this as well .....

I have heard about a program written in STOS which adds proper procedures to STOS and gets rid of line numbers. I believe that this compiles the new type of code into STOS. This was originally listed in a STOS club newsletter, and Goomans have a copy on disk. Does anyone have experience using it?

---

5. Can I *really* write commercial quality games with it ?

Commercial Games

Check out:

Bullet Train (revamped version was released in France a few years ago)
Bumpy
Cartoon Capers (also came with a dual-joystick extension)
Cool Croc Twins
Gilberts Day Out
Prehistorik
Skate Tribe
(We think there's a few more..)

Educational programs

All Fun School programs (also have full STOS source on disk)

Henrietta Series by Lander (also with full STOS source on disk)

Loads of other educational programs by other firms. Some names would be appreciated.

Commercial quality shareware/public domain games

There are also a few examples of top quality shareware games written with STOS. So grab a hold of your favourite PD library and ask for the following:

Grandad & The Quest For The Holey Vest by Ian Scott.
The Glass Buttock of Tharg by Ian Scott.
Grandad II - The Search for Sandwiches by Ian Scott.

Ozone by Nick xxxx (can't remember his surname!) - was turned down by Ocean at the last minute because they found out it was written in STOS.

Pyscho Pig, Sim Pig, Colour Clash, Fatemaster by AnimalSoft.

Plop by ()rm - apparently the freebie you get when you register is better!

Bio Hazard by Les Greenhalgh.Dungeon Master in space type thing.

Most of the stuff by Andrei (some feature STE 8 player options) of which he himself recommends the following: Linecrash, Mazewar ST, Video Games v0.5 Pacmen, Alienation (currently undergoing a re-write) ?

---

6. Are there any books available ?

As far as I know there is the one by Stephen Hill, which was published by Sigma Press. Its title is Games Makers Manual. It teaches you a seperate game style within a chapter, and for the more advanced, gives you the lowdown on writing extensions.

There is a STOS guide published by a PD library, but whether its any good is another matter all together. It is 30 quid and contains some 400 pages of STOS related stuff. Takes you from the complete beginning and shows you how to write arcade, strategy and educational programs. Anyone out there know how good it is ?

Disk Magazines/Newsletters

Not exactly books, but disk magazines are in abundance. Some contain partial STOS sections, whilst there are (or in some cases, were) others which are STOS related and nothing else is mentioned.

Check out:

STOS Bits 1 (now dead - forerunner to HP Source)

HP Source 1,2 (now dead)

STOSSER Disk Magazine (still going - now on issue 19 ?)

ST Programmer (I've only seen one issue!)

Ledgers (had an occasional STOS section)

Maggie (in amongst the swear words was the occasional STOS column)

Anyone know of any other magazines ? Please send in details of whether
the magazine is going or not.

Also required is a compilation of what was printed in ST Abuser, ST Doormat
and ST Review regards STOS, along with a similar listing of useful routines
and articles from STOS Newsletter. Unless, there is already one available.

According to Andrei, New Atari User (still alive?) had a STOS column in
the 16-bit suppliment ? Also there is the Atari Magazine, a French mag which
also has a STOS column or mentions it occasionally !

There is an online-help program for use with The Missing Link. This handy
reference guide will give you the keyword and appropriate parameters for
each Missing Link command. Just like Windows Help files on a PC !!

---

7. What are extensions, and where do I get them from ?

Extensions are a way of further expanding STOS. All the following are
extensions, Compiler, Maestro, 3D and Tracker (Released in the P.D.)

There are numerous extensions in the public domain. The favourites being
MISTY and MISSING LINK, both been written by a group called Top Notch.
They add commands which SHOULD have been in STOS from the start.
Andrei has sent me the following exhaustive list of extensions available for
STOS. It was in two parts, one by Andrei and the other by Les Greenhalgh.
I will use Les' version as it lists the FTP sites where most of them can
be found. Take it away Les ....

The consise guide to Stos extensions.
By L.J.Greenhalgh

Terminology

a.a = atari archive umich edu in either language or progamming folders
k.l = can be found in ftp.ftp.uni-kl.de in the directory
pub/atari/programming/STOS/extensions
s.w = Shareware
cr = Shareware version is crippled
pd = Public Domain and freely available
GI = Goodman International PD Library
STF = was on an ST Format cover disc

Misty extension by Top Notch Software (sw STF)
Can be found: a.a in both Stosers.zip and Misty.lzh files
Miscellaneous graphics commands including an improved screencopy which can
use any of the STs bitplanes, instead of 4 at a time in STOS.

Excellent stuff.

Missing Link extension Top notch Software (sw cr STF)
Can be found: a.a in Link1.lzh - Link3.lzh
about 50 new gfx commands including replacement sprite commands and
commands for dealing with maps and multiple palettes on screen.
A must have.

Extra extension by Martin Cubbit (pd)
Can be found: a.a k.l extra.zip also in cyber.zip
loads of miscellaneous commands including cookie reading commands, mirror
and blur sections of screen , paste strings in opaque mode, format text,
detect tos version etc.
Brilliant

Stars extension by Lee Upcroft (pd STF)
Can be found: a.a stossers.zip
Commands for drawing 3D and 2D starfields, very quick.
Excellent.

Blitter extension by Asa Burrows (sw STF)
Can be found: a.a in their uploads folder in blitter.zip
Commands for using the blitter in MegaSTEs, MEGASTs, STEs, Falcons?
Seems a bit slow.

MIDI extension by Asa Burrows (pd STF)
Can be found STF , GI
Commands for using the STs MIDI port.
Never used it.

Stos Vidi extension (c)
Commands for interfacing with the Rombo VIDI digitiser.
Never used it.

Stos Maestro (c)
Commands for playing samples through Stos, excellent although better
performance can be obtained from the Missing Link's Digiplay command.
[AE - I think that TML does not emulate STOS Maestro's reverse playing
abilities]

Stos Pac/Squasher ? (c)
Commands for packing/unpacking all types of memory bank not just pictures.
Never used it. Depacking ability surpassed by Missing Link. TML supports
packers that can pack tighter than STOS Squasher (eg. Pack Ice).
Unbelievably buggy - read docs with Mega Depacker for more information.

STOS Sticks (c) [AE 26-4] Is that Twinstix?
Commands for reading both joy stick ports. Unnecessary, use TML equivalent.

Control Extension by Les Greenhalgh (pd sw)
Can be found: a.a k.l in control3.zip
Includes a replacement sprite engine which allows you to flip images and paste
them in either opaque of transparent mode. Allows you to use these images on

low rez screens of any size, ideal for scrolling large screens on the STE.
Commands for 16 colour fonts, spreading palettes ,commands for reading a
parallel port joystick adaptor, a switch construct for STOS,border removal
commands, a super fast add command and other miscellaneous stuff.

Quick Extension by ? (sw?)
Can be found: Stossers disczine
Commands for super fast horizontal scrolling, rasters, stars.
Seems good.

STOS TOME by Aaron Fothergill (c)
Can be found: GI
Commands for drawing maps, irrelevent now the Missing Link exists.

STOS 3D by Voodoo Software (c)
Commands for manipulating 3D objects, unusable unless you have a hard-drive
and 1 meg. Too limited, no commands for rotating around current heading and
no commands for representing horizons, ground, etc. Very large files. Objects
cannot be stored in banks, but have to be loaded with purpose made extension
commands.

Cyber exntesion by Martin Cubbit,Andy Cato and Les Greenhalgh p.d a.a k.l
Allows you to play .seq files from STOS. Very good.

Comming soon...

STOS ninja tracker extension for STE/TT/Falcon
Finally a decent tracker for STOS. Allows you to play protracker mods
from a bank in the background at up to 21khz. Commands for vu meters,
track frequency,pattern positions and much more.

At least 2 Falcon extensions are under development which will allow you
to use the Falcons higher colour modes including truecolour and the
DSP for playing mods!

Eagle extension.
A mamouth 80 command extension.

Other forms of extensions that you know about would be appreciated in this
list. As ()rm recently suggested, all those who are in the process of
writing an extension, put your heads together and come up with one mother
of an extension !!

There are other ways of improving STOS without having to use extensions. These
take the form of machine code routines which you pass some variables and
call them. A few of them have been taken from the same list as compiled by
Les and Andrei.

Some Machine language routines used with STOS

BITCOPY
This is what I believe to be a routine that is similar to Misty's SKOPY
command. Top Notch used this in their demos before they wrote MISTY which

now makes BITCOPY obsolete.

BORDER
Top and Bottom border overscan in STOS. STOS runs just as normal, except when you use the mouse/joystick/keyboard, the overscan dies. The top of the screen starts as 'physic', and continues as normal as if the screen was greater than 32K in size. Works on STFMs and STEs.
Found on a disk of the Cunning Demo.

OVERSTOS
Full screen overscan. Can only display a static picture. I think this has problems on STEs. Found on a disk of the Cunning Demo.

RASTER By Neil STewart of Flair
Routine that changes the value of only one colour on the screen. This was later implemented in Son of TML's RASTER command. Can be found on one of the disks from the Cunning Demos by ACO & Flair.

STOS-SPEAK by ?
A patched version of the original SPEAK.PRG - allows you to use speech inside your programs by sending a string of characters to the program.

SPECTRUM (I am not sure of the exact name)
Displays spectrum 512 colour pictures. Very limited as you can only exit from display by pressing space. Shareware (was once on a STF coverdisk. If you register for 15 pounds (A rip-off), you get a version that can display the pictures in a window. I have not got the registered version. This was advertised in ST Format in 1992)

STOS_512 By ?
Routine that splits the screen into several palettes of 512 colours.
This was later implememnted in TML's PALSPLIT command.

TRACKER
An improved mod player. Found on a disk of the Cunning Demo. ()rm is hopefully going to working on an interface to allow the use of the Ninja Replayer routine from within STOS. More news when he has finished failing his degree !

If anyone fancies adding to the above list, then please do. You know where to send any additional information. Apparently larger lists exist of extensions for STOS, but these can be found in STOSSER magazine. If someone can upload or Email a copy of the latest list, I can add them to the above list.

---

8. Recommended programs - commercial & shareware

A *DECENT* art package. Recommended commerical ones are:

Crackart (recommended by ()rm)
Dpaint ST (recommended by: MUG U.K(tm))
NeoChrome Master v2.28 (recommended by: MUG U.K(tm))

A *DECENT* tracker editor. Try not to rip off someone elses work !

Sample-based ones ......

ProTracker 2 by Wizzcat/Deltaforce
Octalyser by ?? (STE only, but has option for 8 channels of music)

Soundchip-based ones

Megatizer by Sector One.
SID Editor by Animal Mine (improved version of Tri-Sound, with SID Emulation)
XLR8 Editor by Sentry

(all the above have the ability to assign 1 channel to play samples)

Without plugging my own stuff too much, if you can find copies of my 'Makin Sweet Music Disks Vols 1-3', they all contained ripped music from games and demos. Each folder on the disk contained the 68000, GFA and STOS replay routines ! If I can get a tune playing in 68000 or GFA, then I don't see why I can't knock up a STOS front-end.

()rms music player program has all the necessary information on screen for setting up and calling the myriads of music available in the ST music-scene.

How to get STOS up and running on the Newer TOS'
TT & Mega STE

Currently it is STOS FIX v3.0 by ?? and it is only available from Goodman Enterprises ! Charging for a program which fixes your STOS code and leaves a bloody advert for Goodman on the front of your code ....

Falcon
You need STOS Fix 3.00 (given away on a recent ST Format)
by Robert Quez???? This will patch STOS for the
later TOS'. Bear in mind that this will only patch STOS to work on your particular TOS. The author is rumoured to be working on a version which will patch STOS for multiple new TOS'.

---

9. Miscellaneous Section

"What versions of STOS have come out?"
"What is the History of STOS?"

Both questions answered by Andrei.

STOS 1 was only released in France in early 1988 (published by Jawx).

STOS 2.3 Was released in the UK By Mandarin in November/October 1988

STOS 2.4 Is a patch to remove some bugs in STOS 2.3 and make it work with the compiler (1989)

STOS 2.5 Is a patch to make STOS run on the STE (1989)

STOS 2.6 is a patch to make STOS run on STEs with TOS 1.62 (1990)
If your version of STOS is below 2.6, You must update it immediately,
especially the compiler. You will then be able to make programs that
run on TOS 1.62

STOS 2.7 (compiler only). Makes programs that use the STOS tracker extension
compile. I am not sure whether or not it is nescesary or not if you are not
using the tracker extension.

Also, FALCOS was being developed (STOS for the Falcon). Apparently, this
project was stopped due to a disagreement between Atari and the developers.

"How to make it not look like STOS!" - Andrei answers a few more questions.

- Try and avoid the 'appear' command (unless the appear you are using is fast).

This tends to give the game away. STOS 'appear' does not let you press a key to
speed things up.

- Get rid of the F-key window first.

There is nothing more "Written in STOS" than seeing the F-Key window when you
have just loaded a game. Alter this within the compiler settings.

- Change the font.

The Lo-Rez font also gives it away. I personally use the font of the Atari
8-Bit computers.

- Change the mouse pointer - almost as ugly as the AMOS Professional one !

- Different type of cursor - everyone recognises that thick ugly cursor !

- Avoid using the SHOOT and BOOM and BELL commands unless nescesary. Replace
them with sound effects from a piece of hacked music ! Try the following:

Count Zero - Killing Game Show (20 SFX)
Mad Max - Numerous pieces have Sound FX embedded
David Whittaker - His fast music may be awful, but most have SFX

- Replace the STOS keyboard click or get rid of it completely. There is a poke
to use the standard ST keyboard click from STOS, but I don't remember it.
[Details would be nice !!]

- Different windows and File selectors (not sure about the new Windows
extension).

You may want to mention that it was written in STOS directly on the title
screen, or say this in the documentation. The idea is that as well as letting
people know it was written in STOS, it can give the WOW effect if it is good.

Shrinking the size of your compiled code by MUG U.K

Well, this section is fairly easy to do. Follow these simple rules.

If you have ANY other packer not listed here, BIN IT! It is either
incompatible with the Falcon, or has a pack ratio similar to that of the
original versions of the Jek Packer - ie. rubbish !

Packers - The Definitive List

Speed Packer v3.0 - definitely the best. AUTO Depack program as well
as Self-extracting archives !

Atomic v3.5/v3.6 - second best. Apparently does not work on the Falcon
but I will release some source code that might allow
you to make your own program headers for data file
packed versions of Atomik files.

ICE v2.40 - Stalwart and much used packer. Still used after all
these years. Compatible with the Falcon but it
cannot match the above two for output size.

Anyone recommend any others ?

Depacker Programs

I can heartily recommend the following programs for converting your old packer
formats back into STOS code so you can patch them and repack them to work on
newer machines. Try....

Multi Depack v1.5 (or the leaked preview versions of 2.0/3.0) - I wrote this!
Mega Depacker v2.12 (by Mike Watson)
Naughty Depacker
New Depack (new name for Mega Depacker)

If the program will not depack with any of the above, then there must be
a reason why it won't let you unpack it !!

Well this is the end of the STOS FAQ, designed and written by members of the
STOS Mailing List (stos@bath.ac.uk).

Anyone is welcome and indeed, encouraged to send in alterations and additions
to this FAQ.

We hope you found it useful. Any Public Domain library is allowed to
distribute this FAQ, but please do not distribute any versions lower than
v1.0 as they are pre-release and probably quite embarrassingly small in size.
Also do not forget to credit that this FAQ was generated by members of the
STOS Mailing List.

3984. Re: Archie (was Re: HSMODEM 6)

Newsgroup: comp.sys.atari.st

From the Holy Book of <3jhcj6$cfj@epsilon.qmw.ac.uk>
as spake by efac001@alpha.qmw.ac.uk (D.Bhabuta) :

>Scott Bigham (dsb@amazon.cs.duke.edu) wrote:

>: Actually, I've had startlingly poor luck finding Atari-related files
>: with Archie. Just last night, for instance, I did an Archie search for

>May i suggest having archie.hensa.ac.uk as an archie server...or even
>archie.doc.ic.ac.uk as the archie server. You should have no problems
>with Atari files with these servers.

I'm confused. Won't these servers produce exactly the same list as
every other Archie server on the `net? Or do you mean that these
servers only list Atari-related files?

>: to find a particular file among the morass of data that Archie knows
>: about, you almost have to know its exact filename, in which case you
>: probably also know exactly where to find it in the first place.

>Can you not do a case insensitive, non-exact filename search?

Sure. And you get the huge list I described earlier.

Another, more encouraging example: I did another archie search looking
for version 1.2.4 of gzip. Since I was able to give a more exact
filename (and a less common one -- you're not likely to find the
character sequence `gzip124' in the filename of anything other than
gzip 1.2.4), I was able to find one (1) German FTP site carrying the
Atari version, amid the obligatory huge list of DOS versions.
Basically, it seems to be a matter of narrowing the search enough that
you hit the file you're looking for before you hit Archie's response
limit; in the general case, though, this requires knowing the exact
filename (or close to it).

>: Utilities/Fileselectors/freedomd.lzh. All in German, of course. Sigh.

>English version will be appeaing at a HENSA near you soon. :-)

Cool. I'll be on the lookout.

>: Anyone know where besides Hensa I can get this Ruftrade program
>: everyone's talking about? Archie was no help.

>Erm, how about ftp.cnam.fr....and other ftp sites..I am sure it has
>spread from here...

Actually, that's okay; I've discovered that you can actually get into
Hensa, if you do it in the evening. Not as convenient as I'd like, but

I'll manage. ;)

Which brings me to my next question: I now have Ruftrade, and it does appear to be doing a better job than the other translators I've tried. So now I need to register the thing, which brings us back to the perennial question: how the @*#$*&! do you register a UK shareware program from the US? It can't possibly be as simple as mailing the guy a check for US$10, can it?

>however have no problems doing this withing 5 to 10 hours of looking
>into the extensive online help and testing the full functionality within
>the 30hours granted by the program. Most users - obviously not all ;-)

Well I'm not sure if I should be saying this, BUT!!!! if you want to
have unlimited use of Connect, just rename CONNECT.OPT to CONNECT.OPX.
The only thing is, that you wont be able to have all the nifty mod sound
FX.

BTW, I use Freeze Dried (registered version), so i'm not using connect like
a pirated version. It's just if you need more than 30 hours to use the
thing, then this will save you having to UNLZH it and reconfigure from
the start.

It is better than STALKER IMHO anyway. BUT FZDT reigns supreme!!! 8-)

> livings.

Of course they care, Kim. Your arguments were just a wee bit sharp, that's all. And NO one in their right mind would attempt to make a living via Atari shareware! :) It's an affair of the heart. Paid registrations in no way compensate the author for his/her time; they just help justify the work to themselves and their significant other. :)

>>5) Can we move on to more useful discussion topics now? Please?
>
>We can, but about what ?

Well, we could always jump in and accuse BobR of 'Atari bashing' or 'PC-Promoting' and of course, there's always good ol' Roger.

< Just jokin', guys. Really! > :)

>fact, most so-called shareware is just the author jumping on the
>bandwagon.

What??? Do you think the concept of shareware is some cash cow for these programmers? Geez, pay yourself ten cents/pence/whatever per hour and you STILL won't likely recover your costs through shareware.

>It should have been P.D. But P.D. does not seem to exist any more.

Of course PD software is still alive, even for the Atari. If you actually meant that some shareware is not of high enough quality to warrant a paid registration fee, then sure, I agree. But we could say the same about some regular -commercial- stuff, too, right?

>But as for some offerings, the most the should ask, in all consciousness,
>is 'Send me whatever you think this program is worth to you'
>which is in all cases fair.

Well, in a perfect world of honest and conscientous users, I would agree. But in the _real_ world, people are most likely going to either pay what the author requested or pay nothing at all. The author is the only one who knows how much time and effort was put into the program and thus is the one who should establish the 'requested' amount. But face it... if someone sends the author $10 when he asked for $20, is he going to send the money back and say, "Sorry, but the fee is $20" ? I doubt it. :)

Shareware is far from a perfect concept but isn't it nice to at least have the alternative. Shudder to think what Atarians would do if ALL we had were commercial offerings to choose from, eh?

My hat's off to all shareware authors. Thanx for the support, gang!

Have you tried STarCall ??? There is no time limit on the unreg version just a shareware message & delay when quiting. VERY easy to use with both editor & buffer windows as well as the terminal window, a script type batches to do all the work for you *PLUS* if you register for the "pro" version you get FAX and BBS software as well (I might add well worth the DM90 S.W. fee) with auto sensing of data/fax when in auto answer mode......

Well worth FTP'ing IMHO

I'm using MagiC with NVDI 3.0 and Ease 3.0 as desktop.

The speed of MagiC (real preemptive multitasking !) is amazing and Ease offers in it's most recent version a functionality superior to everything I'v seen before (drop a file on a drive icon and hold the mous for a second -> a menu pops up with all subdirectories on this drive and You can directly seclect the directory where the file should be copied without clicking al the way through them, etc, etc).

I'm completely happy with it.

: Thanks....

If you've got the cash then Apex Media is your best bet, it will handle all those file formats and more with remarkable speed. There is also Studio Photo which has _very_ limited editing tools and is slow, but its also a 6th of the price (I believe) and works solidly. As for PD or Shareware you could do worse than get GodPaint which is a pretty neat little program by all respects, essentially True Colour only though. Or perhaps Indy Paint which as it stands doesn't offer too much (except some cool filters) but the new version should be pretty neat indeed.

I have been using my CD-ROM (Texel - but forget the new name of the company) for a little over a year now and have been very fortunate in finding CD-ROMs that I can use on the Atari. I look for things with WAV, GIF, Jpeg, etc files.

Recently I purchased a CD ROM called wallpaper and found that all graphic files had two entries - both named exactly the same thing. Of course our current crop of CD ROm drivers does not handle this. This is just a warning for those of you who are also adventurous.

The CD-ROM did not have a company name on the outside of the package - it did have some words about "wallpaper" and Mac on it - and it was a collection of nature images. In the verbage on the back it said something about hundreds of bitmap images but nothing of duplicate named files. BEWARE

>get a book on german language).

This concern for the customer just amazes me. Maybe its a cultural difference. As I see it, if you want to sell to someone who speaks English, then the docs better be in English. If you want to include Germany in part of your customer base, then the docs better be in German. Ditto for any other nationality. (AT&T makes switches with error messages and documentation in the language requested by the customer.) If you are satisfied not selling to others, then you do nothing -and mostly you do not gain that part of the market. The onus should be on the one to gain the advantage - the seller not the buyer. Just my personal opinion. To my thinking, that leaves doors open in the "other" language countries to sell homegrown software. Good for the local economy, too.

subject: atari -> mac midi file conversion

HELP!!! - what little hair I have in in great danger if someone
doesn't come to my rescue soon...

I am trying to convert a standard midi file saved as such on an
Atari Mega ST2, passing it via floppy disk to a macintosh
using Access PC - the file having been saved onto a
PC formatted 800k disk - and then attempting to import it into
ANY sequencer. I have tried using ResEdit to alter the creator
and type of the file/s - both arrangement and song - respectively
scAR - stCU and scSG - stCU - plus altering the hearer to Midi
and creator ???? - but no such luck. One strange item is that
a file saved as a standard midi file on the mac bears the arrange
type indicator, while the imported atari file is simply TEXT,
with creator as ????. Can ANYBODY shed some more light on this
subject? I am mystified by all this, seeing how I have been happily
passing samples back and forth between both platforms successfully
for some time. THERE MUST BE SOMETHING REALLY SIMPLE I'M DOING WRONG!

ANY help AT ALL most gratefully received!

From: jafraser@netcom.com
Message-ID: <jafraserD5504D.D8M@netcom.com>
Source record: 169728

Hi. I ftp'ed Connect about a week back. I like it and find it easy to use. Sometimes it seems a bit slow with respect to displaying text (well, slower than I am used to when using Uniterm), but this may be because of some setting, I'll figure that out myself.

What I can't figure out is how to turn off that (annoying) tinny "gong" sound that regularly happens.

If it has something to with the fact that I am still in the trail period of this programme (some sound to remind and annoy me) then that's fine. Otherwise, I would dearly like to know how to disable it.

Adele.

: What??? Do you think the concept of shareware is some cash cow for these
: programmers? Geez, pay yourself ten cents/pence/whatever per hour and you
: STILL won't likely recover your costs through shareware.

Nope. This is not the point I was making. Just that a while back, every
piece of software which would once have been PD became shareware instead.

: >It should have been P.D. But P.D. does not seem to exist any more.

I don't think new software is ever PD. I do know that there is a vast
archive of PD software out there, some of it excellent, some not so.

: Of course PD software is still alive, even for the Atari. If you actually
: meant that some shareware is not of high enough quality to warrant a
: paid registration fee, then sure, I agree. But we could say the same
: about some regular -commercial- stuff, too, right?

Dead right. And shareware gives you the good old 'try before you buy'.

: My hat's off to all shareware authors. Thanx for the support, gang!

I agree entirely. Shareware is keeping the Atari market alive! Where would
we be without it? Probably all playing Doom on PC's!

Pull the termination packs off the tape drive (or the hard drive, whichever is closer to the HA in the Toadcase), Dan. That ought to help.

I'm using it and I'm not registered. Of course, I haven't used it much, and I do plan to register. But unless I am ABSOLUTELY sure the registered version will be able to load ANSI screens that already exist, and edit more than a single 80x24 screen at once, I won't be in a hurry - I can use THEDRAW on my lover's 386.

In article <jafraserD5504D.D8M@netcom.com> jafraser@netcom.com (Adele Fraser) writes:

Hi. I ftp'ed Connect about a week back. I like it and find it easy
to use. Sometimes it seems a bit slow with respect to displaying text
(well, slower than I am used to when using Uniterm), but this may be
because of some setting, I'll figure that out myself.

What I can't figure out is how to turn off that (annoying) tinny
"gong" sound that regularly happens.

This 'gong' is warning you about a new fee unit to be paid soon.
But as you probably did not set up the fee system properly, yet you might
want to disable this warning completely - so simply go to the dialling
dialog and start one of the modem setup dialogs there (I think it is
number one). Clear the string with the *.[89]* in it and save the
setup-

The latest is 1.10, the upgrader is available on atari.archive.umich.edu.
I'm not sure about MINIX partitions, thought my guess would be "no".

There has always been such a utility included with Diamond Edge. It is
Diamond Mirror. Very handy stuff, there.

Date: 1995-03-08 21:55:14 UTC
From: barheath@heathen.demon.co.uk
Message-ID: <950308Z215514.550barheath@heathen.demon.co.uk>
Source record: 169809

This thread is beginning to go nowhere.
It seems to have degenerated into "Kim versus the rest" thus achieving nothing.
Having read everything, I suspect that the final result will either be to re-define shareware, or we'll all develop our own definitions.

It would seem, taking into account all opinions, that, in the current climate, some form of incompleteness will have to be accepted in distributed, pre-registration versions of software, owing to the prevalence of non-registered users.

May I suggest the following as a working definition for the future: That shareware be considered to be software to which the author maintains full and total copyright, but which may not carry the total performance of the program as distributed. Such total performance may be fully enabled by registration of the program with the author and payment of the requested registration fee. Such incomplete programs may be distributed freely and without hindrance provided said version includes documentation sufficient to enable full evaluation of the program to be made save only for the advertised limitation.

One very pertinent point made by a respondent in another thread concerns the method of payment. In many cases the author is in one country, the user in another, and the currencies are not common. Registration is therefore resisted as the charges made by the moneychangers raise the *effective* fee beyond reasonable levels. Somehow a system has to be designed where it is possible to transfer funds from one currency to another while avoiding the iniquitous bank charges. Joe Connor runs one system in the UK, while other methods include using a retailer to take registrations (cf System Solutions for ConNecT). This may help to improve the level of registrations.
I've done it myself - found a nice little gizmo, then found that the shareware fee is about $5. To change and ship that cash to the US would cost me more than the fee - gizmo junked (or left on the cover disk!)

Anyone else got a better idea?

bazza

: as I didn't get any manuals with it.
:
Don't worry. Most of us got Atari manuals which are about as much use as a
chocolate fireguard.

: I own an Amiga 3000 (very very nice!), Apple IIGS (2, My wifes), TI99/4a
: I have owned a commodore Amiga 500, Amiga 1200, Amiga2000, C64 and C128.
: I Did have a Apple Mac running in my A3000 by emulation (worked great)
: and did last easter week-end for less than 48hrs owned a 486DX from best-buy
: and would have taken it back on E sunday but they were closed.
:
No SEGA? :-)

: And now, an Atari Mega ST with B&W Mon and Emagic Notator Logic Midi Prog.
: I have the manuals and all for Emagic so no problem there.
:
That's a start...

: Is there any info on the atari one can obtain?
Yes, all over the place
: Maybe someone out there has a manual they can Give/sell me.
not me I'm afraid, but wait a second...
:
: I have a pretty good idea whats going on and I can just run Logic
: as is and need to know no more.
: I want however to know more!
And so you should :-)
:

Atari are notorious for their crappy manuals. Get hold of a text file
(about 250k) "Your Second Manual Of The Atari ST" as it will tell you more
than the official book. In fact you may find a few printed copies of YSM
still around, but the electronic version should be on most sites somewhere.
ST Tour would also help; it's a program by Atari that just shows you the
basic operation and lets you play around with the mouse and window gadgets.

: Any info would be helpfull.
:
: BTW: I like it so far!
As the actress said to the bishop (sorry!)

:
: Thanks,
:
: Neal G

: What is an earth loop, and where would it and the cable shielding be located;
: on the motherboard? I get the same hum also when I run it on a TV.
:
:

An earth loop occurs when both ends of the earth (ground) side of cables connecting systems are connected to the ground terminals. If, for instance you have a tape deck and an amp, each connected to an earthed mains plug, and you connect them via standard shielded audio cables, then a loop develops between the grounded side of the cables and the mains ground. Both ends of the shielding are grounded via connector pins, and both ground terminals of the equipment are also connected. The effect is to form an antenna which picks up the 50 or 60Hz mains frequency, and induces that into the signal cables of the conencting leads.
A loop -can- also occur between the signal return and the shield, but this causes a less noticeable hum, but will affect signal quality.
The solution consists of breaking the loop; it's normally done by disconnecting the shielding braid inside one of the audio lead plugs. The shield is that braid or foil which runs around the wires inside a cable, on an Atari it's also that metal covering over the motherboard. Don't try disconnecting that or the mains ground. One's not practical, the other could be lethal.

In your case, as in mine, the disconnection has to be made in the signal circuit, and I think it will have to be done inside the cables. The grounded shields must be connected to ONE of the units only; it's probably better to make it the Atari. Either that or get a proper electronics engineer to figure out exactly where your loop is occurring and break it in the monitor.

Hope this helps. An earth loop is not a component, it's an accident! get back to me if it's still not clear and I'll try to figure out a way of showing it graphically.

I played around with it for a bit in 1986 before I had any *real* software
for my ST. It seems to work just fine - though several of the standard CPM
utilites like 'pip'(?) are missing.

> Specifically, is it possible to use the RS232 port under CPM emulation?

I'm pretty sure it did - can't remeber if I tried it though.

:-)

Roland.

If you like NeXTSTEP then wait for OpenStep, same type of thing except it will run on a multitude of plaforms. Sun, Win 95, Win NT, etc..

The bonus is that a lot of developers are coming on board and are going to be part of it and support it.

It's going to be a little like NeXTSTEP but the GUI isn't cast in stone and only defines a "look and feel" AIUI.

This is what I understand of OpenStep anyway, so I could be a little off track in some parts..

(I have a proper press release text at work, mail my work address as in my sig if you would like a copy).

I'm pretty sure you can get stuff back, although I don't remember how as I never use it myself. I'm sure you can because if you want files deleted properly you have to 'empty' the recycler.

: >like to here from you, but all opinions are valid.
: >BTW, the program in question is called FrontEnd, and can be described as
: >a kind of GEM based "visual GFA basic". I'll post more when I upload...

: Well, that sounds just about crippled enough, just below the knees ya know?
: From my point of view it would be important to see how it prints, so allowing,
: say ten prints to be made , would give me a really good idea as to the quality
: as this would depend on your printer drivers (unless you use Speedo/NVDI/GDOS
: of course - do you?)

The main program itself will only print to 9-pins, but a bonus program
uses (Speedo)GDOS/NVDI for printing.

: Or alternatively, the capability to export/save in another format say 5-10
: times would allow me to judge how usefull pictures created in your program
: would be imported into pagestream or calamus for example. If I can create
: great drawings in Munch, but they just become scrambled eggs in calamus I
: would tend to lode interest, non?

This limitation only exist for pics larger than 640*400...

: As regards the Atari market, it may be small, but I feel inundated!! I've
: downloaded tons of software and keep almost none of it. There have been so
: many drawing/paint programs I've downloaded I have lost track - hey - I may
: have even downloaded your program, but may have tossed it for the reasons
: mentioned above - I couldn't test it. But I can't remember if I did or not.
: There's a program that I think I might keep called PAD, so I better send off
: my fee A.S.A.I.G.T.$. Do you know PAD, can you objectively compare it too
: Munch?

I realize ST Format is not regarded highly in this forum, but they gave
my program a higher score than PAD. Pad will *only* work with screen
sized pics, Munch will go up to 2500*3500. Munch has more and better

tools (in my humble opinion :-)

: I understand that you don't want to give away the fruits of your sweat, but I
: think you have to remember that people have to know that the program will do
: what they need it to do. Is it possible for you to only allow 5-10 file
: exports per program? Or maybe fewer eh? It just occured to me that 'some'
: people might just download multiple copies, and when their 10 free exports
: expired, de-compress the next copy. (We have names for people like this) So
: maybe 1 or 2 exports per program in order to keep the hassle level too high
: for abuse, but still enough to give you an idea.
: I've also seen developers talking about how many downloads their program got
: compared to the number of registrations they received! Perhaps you feel that
: once someone downloaded your program it wouldn't be possible that they would
: not rush their money too you for the fantastic program you've written.
: Therefore almost everyone who has downloaded your prg is using it without
: paying for it! Reality check. I download a lot of stuff I am curious about,
: but have no use for at the time I download it. I download it to satisfy my
: curiousity and to see if perhaps I do have a use for it! If you're not getting
: enough registrations, perhaps you should look at the perceived usefullness of
: your program, and the competition. Ask the writer of GEMview how many
: registrations he's received, hopefully more than 20! (he's got mine anyway)

I have *no* idea of how many people have downloaded Munch. I don`t even
know how available it is for downloading. All I know is that I uploaded
it to umich.edu...

: Hope this was usefull
: Thanks/merci
: -ken

Yes it was!

: OOOPPPS> I may have goofed. Not being familiar with Munch. Did you say that
: only pictures larger than 640x400 could be saved in your format, therefore
: pictures smaller than 640x400 could be saved in alternate formats? If that's
: the case, that isn't crippleware at all!

Yes, that is the case. The restictions are only true for pics larger than
640*400. Sceen sized pics can be saved as PI3 (IMG & PAC are reserved for
the registered version). It *is* sort of crippled, but not much... (if
you only want screen sized pics, or output in C or assembler format).

: Do any members from the Atari Developers Assoc. have any input vis-a-vis
: unrestricted software and crippleware releases?

I`d like to hear that, too!

Hi!

Does anybody out there have the docs for EoR, the profile editor for XoR? (In case you don't know what this is about, XoR is a universal MIDI patch editor/librarian for the Atari ST and other platforms). I suspect my documentation file must be truncated, because it ends in the middle of the Prophet V tutorial (especially since this is labeled Example 1). Any help in this regard will be most appreciated. Incidentally, has any reader of this group attempted writing an instrument profile from scratch? Thanks in advance.

Gustavo

I don't think this is a good idea because the better features is the
interesting thing which I would like to test on a program. If a program
didn't has what I need I didn't test it anymore and therefore didn't
register.

```
>Also get local registration agreements in place. Nobody likes to send money

This very very true. I have around 60 registrations in germany but only 5 or 6
from other contries. How comes ? The reason is the exchange rate for foreign
currencies.

Well I prefer MiNT (with Xwin etc) because I have 12 megs of RAM so VM (or lack of it) isn't a problem (yet) and I can access all my drive partitions (TOS and Minix) without any problem (great for moving stuff back and forth) and run most .tos or .ttp programs (of which there are many). Besides Linux for atari is still in the very early stages so there are still some problems - Mint has its problems too but it's been here a while and is stable.

As well it supports all the devices on my TT and stuff like sound players (even DMA sound) work fine under X windows. When more is available for Linux that directly supports atari devices and file systems I'll check it out. It is like having the best of both worlds! Now when someone gets the gemX libraries up and running maybe we can get some GEM programs running under X, that would be REALLY cool!

Does anyone know if there is a Macintosh file system driver for Mint? I'd love to be able to access my Spectre partitions as well.

Thanks,
Sam

>

OK, I tried not loading HSMOD drivers at all and then TTser2 did not support 38400 under Mint1.12/MintNet 0.70/pppd - with the drivers it does. This tells me that the drivers are having some effect but the 57600 mode is still not supported. Either way I now think it doesn't matter since the pppd and ppp0 interface use VJ compression so even for text I don't think anything is going to come out of my modem > 38400 since the data is all compressed anyway. It probably averages 1600cps like when downloading any zip/lzh/arc or other compressed data.

It would still be nice to figure out why Mint doesn't allow the higher baud rates supported by HSMOD.

I have 4 meg ST ram TT with a 250 meg hard disk and an extra 50 meg drive (full of ST demos ripped of ftp sites). I haven't been into Ataris for a while cause I moved so I don't know going prices. Somebody quote me an honest price (even if your not interested in buying) and I'll consider selling it. It has a NEC multisync 3Ds monitor which I may want to keep....
At any rate, if there is some one who might be interested in cheap TT lemme know.

BTW - this computer is clean... no roaches living in it. It does get used occasionally to un LHA files for use with my PC and un MSA old ST demos just for fun. It also has about 65 megs (compressed) of MODs... the 250 megs harddisk is full... might not be useful to you but its there.
NVDI, Pagestream, Word Perfect, Diamond Back Utils are just a few of the programs on the hard disk...

We use Atari computers at our gigs too.
For our next gig, we are recording most of our sequencing to tape before
the show, and using an atari live to play more 'live' stuff.
fun fun fun.

4069. Falcon SDMA IC information

Newsgroup: comp.sys.atari.st
Date: 1995-03-09 09:34:58 UTC
From: hillsp@genrad.co.uk
Message-ID: <1995Mar9.093459.135@genrad.co.uk>
Source record: 169769

Does anyone have any information about the Sparrow DMA (SDMA)
IC in the Falcon. I understand it is an Atari ASIC that maps in memory, and
converts any data sent to it to serial format to communicate with the CODEC.
A datasheet would be brilliant, but that's probably asking a bit much!
Any information would be much appreciated.

TIA, Paul Hills

OK, both SRC and HENSA will produce the same file list. However, you
can go to an archie server in another country, and it will be slightly
different. Not all archie servers keep the same file lists, and they
also have file lists from different places.

It's a Unix compression. On ST, there is a compress.ttp that is the same but you need to watch out for the number of bits used in compressing as ST can only go up to 12-bits and most Unix is 16-bits.

compress.ttp can be obtained from a.a.u.e

In response to BobRs message <3iu75r$1rf$2@mhade.production.compuserve.com>,

] Have you ever installed a network card in an Atari ST..?
I don't need to. My Falcon has a LAN port already.

] Have you ever installed a 16 bit stereo wave table synthesis card in an ST
I don't need to. My Falcon has a DSP and 16 bit stereo CODEC already.

] Have you ever installed a SuperVGA accellerator [sic] card in an ST..?
I don't need to. My Falcon drives a SVGA monitor with a 10 quid adaptor
already.

I haven't got an ST, but then I'm not comparing my Falcon with an
IBM XT either. Why compare a modern PC with an ST?

Version 2.70 of CoMa is out for almost two weeks already. You can find it
on ftp.cs.tu-berlin.de and ftp.cnam.fr at least.

The 2.70 package does contain english docs. You can also order an english
booklet when you register the program. (I did).

Looks like STF are losing readers by the day, and the only way they can counter that is to pull up their socks, not buy out better competitors to shut them down,
because ST owners want a _quality_ magazine. That's why from the sound of Atari World and the support from around here it certainly will beat STF, and I for one
don't care a bit if it does.

> would be appreciated.

MINIX is an operating system. MiNT is an extension to the TOS operating
system.
MiNT can use a MINIX-compatible file system which is faster and more powerful
than the normal TOS filesystem. If somebody talks about MiNT and MINIX at the
same time, he is most likely referring to MiNT *with a MINIX filesystem*.

To get something similar to a UNIX system you need MiNT (preferably 1.12),
the MINIX filesystem (0.6pl11), bash, and lots of utilities (I use the GNU
file, shell and text utilities, as well as GNU sed, awk, make, GCC, less
etc.). There's also a networking extension, and even X servers and WWW
browsers (which I don't yet have a use for, and which are probably overkill
for my 4MB ST).

Most of this stuff is available from atari.archive.umich.edu and a variety
of other FTP servers.

Greetings,

Jens.

4085. Atari Stocks

>Seriously, I'm pretty sure the authors of CLOE are not aware at all that their
>demo would have been spread so far and wide.

Rhetorical question, Mr Doucet (it's funny, when read in polish, BTW):
what do you think, why did they upload it to the FTP-sites?

>>it is impossible to force anybody to learn Polish; so I can accept English as
>>the language of the international communication AS LONG AS ANOTHER FOREIGNERS
>>WILL ACCEPT IT TOO. If you use your national languages (German, French, Czech,
>>Dutch for example), I will use POLISH in my programs and doc's. Polish, or...

>OK.Then I'll buy a polish->french dictionnary, as I've already done for german

UUUAHAHAHA!!!! <explosive laughing>,... hem... OK. Well, if you, naive man,
think the polish language is as easy as German (hehehe...), buy the dictio-
nary now <grin>. If you do it, you'll have at least a good collection of
dictionaries. And good luck: when I'll finish the program, on which I am
presently working, you may be sure, that I'll prepare a doc-file using
the full features of our grammar, then I'll send it to France. Especially
for you, Mr J.-E.D.

>A brilliant idea, thank you Konrad. What about crippling by only giving
>french (or any other language) program and docs, and waiting for
>registration (with money this time) to send english program and docs ?
>It's only a matter of few hours, just redraw all texts in french.

What do you think, for what reason there is the Trash Can on the GEM
desktop? To put in them unusual programs with their unintelligible docs.
Just think, Mr Doucet. Just think...

>>Quomodo Vobis placeret, Galli defututi, si Latinum sermonem adhibeam?

>Ga Bu Zo Meu.

I don't doubt, that your phrase is as meaty as mine. BTW: did you understand
it using dictionnary?

There are a couple of system variables you need to change which limit the
mouse pointer. I can't remember off hand what they were but I remember
using them years ago to get the GFA basic editor to work when run from low
res.

> Also, what exactly do the transparent blit operations (vrt_cpyfm) do
> in transparent, XOR and reverse transparent modes? What do you do with the
> background colour index in these modes?

I believe you handle them the same as when drawing in these modes, eg in
transparent those pixels set in the source are set (to the specified
colour) in the destination, those not set are unchanged; reverse
transparent sets those not set in the source (IIRC) and XOR toggles
(toggles each bit separately I think) all the pixels that are set in the
source.

Smaller, regional Atari shows continue around the country. Houston, Texas just had theirs and Indianappolis is slated soon, I think.

The biggest show in North America this year will be the ACE show in Toronto, Canada. It's shaping up very nicely and should be well worth attending if you can afford to get there. It might very well be the last BIG Atari show over here. There was a big announcement posted here just last week and more will be forthcoming.

WAACE AtariFest shows in the D.C. area are a thing of the past. :(

There _may_ be a Glendale, California, Atari show later this year but I have not heard any confirmation from John King Tarpinian, the show's coordinator for the last 7 years.

No, that would be no use unless he has a usd account which is very unlikely. But he might accept dollar cash and would certainly accept sterling cash.

Unfortunately you can't get (or use) Eurocheques in the US. With these you can write a cheque in any European currency.

Wow, I guess I really _am_ confused, now. I must be missing the point.

WHY would you think it more 'ethical' for him to charge 10UKP for just
one version rather than 5UKP for two?

Good thing he's not giving it away or you would be _really_ upset with
him, eh? ;-)

Just joking with you here, Steve. I agree it might be less confusing if
the upgrades were priced less than the initial registration fee, but I
don't see how the current scheme should be considered unethical.

Geez, Kim... I really wish you stop this annoying habit of speaking for me. I really _am_ capable of formulating and verbalizing my own opinions.

> users end up with a limited program, and still the same obligation.
> Thats not fair, and specially not fair to a honest user.

I don't understand your complaint. If users choose to pay the registration fee, they get the full version (and usually some extras such as printed documentation, utilities, or a free update). How is this unfair? Only if the limited version is not clearly designated as such would I agree.

> And it's not "nag" box's and save disable features i'm talking about

Whoa! Wait a minute. At first you said shareware should have NO imposed limitations and now 'nag boxes' and 'save disable' are OK? Which is it?

If it's just the naming conventions that bother you, so be it. Come up with another name (hopefully something with less negative connotations than 'crippleware') and convince everyone else in the world to use it. Of course, how you intend to do that might prove interesting. :)

While primarily a group of commercial software developers, the IAAD discussed this situation before. From memory, this is basically what we informally agreed on:

'Commercial' is software that is never freely distributable and is usually licensed only to the individual purchaser unless a site license purchase agreement is made. It is only available from the developer, dealers or distributors. It's off-the-shelf software and is always copyrighted and may be trademarked, as well.

'Shareware' is generally used to describe all software that is freely-distributed and in which the author requests a registration fee if the user decides it meets his/her needs or after a certain period of time. Whether the distributed program is fully functional or not makes no difference in the classification. It _should_ be functional enough to allow the user to thoroughly test it, of course, and any limitations clearly identified, but that's up to the author to decide.

'Demoware' is used to describe demonstration versions of commercial
software that has been minimally limited (crippled, if you will).
It is freely-distributable (the authors hope you will!) but you can
only obtain the full version from the developer, dealer or distributor.

'Freeware' is just that... the author may still retain distribution
rights, but he doesn't charge individuals for it.

'Postcardware,' 'chocolateware,' etc, are simply fun categories of
freeware in which the author really just wants to hear from you.

'Public Domain' software, in the purest sense, is software in which
the author has relinquished all distribution and usage rights. It may
or may not be copyrighted, however, based on the author's choice.

There might be other categories, but I don't recall specifics.

These are just one set of definitions... your mileage may differ. :)

Nope. I might try to do it if I start to use it regularly.

: Or how do I get it to dial out, ? it grabs the medem but does not
: Dial....??

I had this problem, becaus my modem (US Robotics 14K4 Sportster) only supports FAX classes 1, 2.0, and 3. And Junior Office only supports Class 2 by default.
I have a class 1 driver, kindly sent to me by a German Atarian, but I have yet to see if this works. I expect it will though.

With the permission of TKR, the copyright owner, I am able to make this publicly available. As it stands, I have their permission to download it from their German BBS, but instead I had it sent down the Internet.

>>So far, I have yet to see anything that is completely in English, however.
>
>Dan this seems to be a Big problem with Germany, Germans seem to think
>that Germany = the World and every one speeks German...

Yeah right. That's why one who speaks three languages is called
trilingual, one who speaks two is bilingual and someone with just one
language is called American. And shall I start mentioning how often people
in the net thought I was American? Just that I don't use a .de address
makes them think so.

>Come on you Germans if you wish others to use and accept your standards
>Please post them in a Language that most people in the World can understand..

Gemini was aimed at the German market, and so was the implemented VA/AV
protocol. Many programmers _do_ pack English/French/Dutch .RSCs and Docs
into their archives, but still, you are not in the position to _force_
them doing so. Asking them kindly would - IMHO - be somewhat wiser.

>Its the same with your software, you have some of the best software in the
>World, but the big problem is that the World can't use it as it in German..

Yes, some customers here like to use software in their own language, and
that's the reason for this. In addition, there isn't a market for several
of these programs outside Germany, at least the companies and programmers
seem to feel so. And - _all_ commercial programmes for Windows are localized
for Germany, it seems a programme doesn't sell here if in English, t least
not in the clone PC branch of the software market.

>Like Tempus and Tempus Word, HDU, Script and Phoenix just to name a few..

Do you feel there are paying customers for these? I'd then ask some of the
distributors in England or the U.S. to start carrying these products in a
localized version. Systems Solutions, HiSoft and JCA are worth a try, again
IMHO.

> Failing that, I will look out some old code and write my own version.
>
> Mail responses to me and I will post any sites, info, etc
>
> thanx
> the hatter

Well I've mostly written a doc displayer that's similar to Revenge
except that it has top and bottom boarder display so you can see more of
the doc at any one time. At the moment the doc files are assembled as
part of the doc displayer, but with a bit of work it could be modified to
read from disk. It has support for book marks, it's fast and has direct
printer output to parallel port with printing of the whole doc or
selectable blocks from whole doc down to a single line. A bit basic but
that helps keep the speed up

So if there is enough interest i'll get round to finishing it... (maybe)

Source record: 169736

I've been interested in obtaining a package like AtariWorks, but I am scared of it now.

1) More than one person has complained of a "black page syndrome" - spitting out black pages from the printer. (This must empty ink and toner cartridges in no time!!!)

2) Chris Herborth says when he tries to print to his DeskJet 500, he gets 2-4 bombs and crashes out - AtariWorks isn't suitable for anything in his opinion.

Gosh - I can't believe this! AtariWorks must *really* be from the banana republic of software developers. Any idea how something this buggy could be mass produced?

Is there an alternate package, or at least word processor, that will allow the mixing of text and graphics on-screen??

James

From: nggilber@cca.rockwell.com
Message-ID: <D572Co.Joz@lazrus.cca.rockwell.com>
Source record: 169737

Hello Atarians

I have Notator Logic version 1,73 that I bought used with a Mege ST2
but I need a Reference manual and/or
any other missing info that would normally come with it.
I have the Black Tutorial Manual, the 1.6 Addendum and the Quickstart manual.
The Tutorial Manual has been quite helpful but there are some
finer points it doesn't cover.

So If you have up-graded to a newer version and have these sitting
around collecting dust I'm interested in obtaining it.

Thanks,

N Gilbertson.

Of course we give a s**te! I for one am sick and tired of people like you throwing abuse like this about. Atari World is being launched, and STF *is* changing and evolving.

l> I heard they started selling Macs. Well, they still won't last long
l> the way they're going now.

Put it this way - they're an official Apple Reseller. If they muck about in that market, they *will* be sorry :)

Frank Charlton, ST Format.

4120. Mint questions re init & x

Newsgroup: comp.sys.atari.st
Date: 1995-03-10 00:24:45 UTC
From: mattk@netcom.com
Message-ID: <mattkD577t9.IMp@netcom.com>
Source record: 169749

Hi all...

Here are my problems! I worked out the init and login and rc files...kbd, pty, syslogd all load fine...I can log into my "x" account. Xinit runs. It gives me an error message that's roughly 'can't set path /usr/lib/X11/fonts/.....' (it tries to put the path of all the fonts in). Then it gives me an error message regarding its inability to load fixed.bdf. Then it says something about can't find X server...then it aborts. Any ideas?

Second question is about "access". First, where can I get a description of how to put entrys into /etc/passwd. Second, how do you set auothority....most of my files were set up from root...I can't log into root (there's no entry in the passwd file), and I don't know how to set my main account, dog, to have superuser status...

I know this is a bunch of junk, so I'd be extra appreciative to anyone who can paw through all this...

Bye for now,
Matt

> Is there anyone out there who knows where i can find a RCS ?

I know a version exists as I know it's around on some UK BBS's.

I'm even more sure it's on CiX, perhaps someone could grab it.

I would've thought you might find it if you did a search for 'rcs' in either
of the 2 main Atari ftp site file lists.

src.doc.ic.ac.uk:/packages/atari/umich
micros.hensa.ac.uk:/micros/atari

JM>> Your not suggesting that you would be willing to purchase a cracked
JM>> version for 50 bucks are you????

I am ABSOLUTELY NOT asking for a cracked version!!!!!!!! I resent the implication. As I understand it, Cubase requires a dongle anyway, so the point seems moot to me. It would be silly for him to send me just the dongle, and it would be inept on my part to assume that he possesses the programming knowledge to make the software run without it. I made an offer to purchase the legitimate package that was posted for sale here. End of story!

Re: Other graphics formats on CD-ROMs

If a disc mentions "wallpaper" or "bitmaps", the files are likely in Windows .BMP format.. (is that how the files on that CD-ROM were named..?)

I'm not sure if the latest GEMview program can handle BMPs or not.

As for having duplicate named files, were there any differences in the sizes of the files..?

Some discs offer two (or more) resolutions of the same picture.. the higher resolution files would be a lot bigger.

Even a PC wouldn't be able to handle files with exactly the same name, in the same directory. Usually the different resolutions are grouped in separate directories... the Atari file system should be able to read them this way... was the problem different..?

>Until you buy a new program. Word Perfect, for example.

Yup.. and then, just like I already said, you install it and then leave
it alone.

>Until you want to run something that didn't come pre-isntalled on the hard
>drive, yes.

Yup.. and then you install it and leave it alone. You don't "constantly have
to fiddle with AUTOEXEC.BAT or CONFIG.SYS", you don't "constantly
have to fiddle with IRQ settings", you just set it up and leave it alone.

The point about the AUTO folder screwing up the ST simply illustrates the
fact that ALL computers have their own particular kinds of problems. The
fixes or workarounds don't matter.. they ALL have problems.

The Pinto might have had an exploding gas tank, but that didn't mean the
Corvair was any less likely to flip over...

4139. Request: Cubase - wanted to buy

Newsgroup: comp.sys.atari.st
Date: 1995-03-10 06:33:34 UTC
From: zrollinso@cc.curtin.edu.au
Message-ID: <1995Mar10.153334@cc.curtin.edu.au>
Source record: 169670

A friend of mine uses cubase on a mac and just recently bought the new version (for mac) which includes a few new things like grace notes etc in the scoring.

Since we work in music together I thought that it would be handy if we used the same package - and since the best I have to offer is Steinberg Pro 24 It looks like I am the one to upgrade. Can anybody tell me if the Atari version of cubase is up to speed with the mac version (or have steinberg abandoned us?) and also, is there anybody who is wanting to sell cubase (for Atari)? (preferably in Australia because of cost of postage across the pond but I'll consider just about anything).

...and while I'm asking questions - is cubase score part of cubase or is it a seperate/add on product?

Please send reponses to the address BELOW. Any "me too" requests can go to the address below and I will forward on any responses (if any).

thanks

>Someone told me that ALL the pins...

Is the SIMM board you're installing a new board, or used from someone else..?

A new board should have detailed instructions for the installation, which should be followed carefully. Even if it's a used board that didn't come with instructions it would be a very good idea to contact the company that made the board, if they're still in business, and try to get a set of the instructions from them.

Generally when increasing the memory in an ST to a full 4 Megs, the original memory on the motherboard has to be disabled since the MMU chip in the computer can only address 2 "banks" of RAM, and with 4 Megs on an expansion board, the 2 banks will be on the new board.

It's not necessary to completely remove the original RAM (or cut ALL the pins), although that certainly can be done. You need to disable the RAM on the motherboard by tying certain of the common lines to the +5 or ground lines which will put the RAM in a "low power-standby" mode and cut the lines to the MMU chip.

It's been too long since I read the instructions on my DataFree upgrade board to be able to give any specific details of how to do this though, and the actual details vary depending on what model of ST you're working with.

I can try to dig up the instruction sheet from my upgrade board, but again, the specific instructions for your board should be the ones to use.

4143. MagiCMac Demo -- ReadMe in English

Newsgroup: comp.sys.atari.st
Date: 1995-03-10 07:38:24 UTC
From: obryan@gumby.cc.wmich.edu
Message-ID: <3jovlg$bki@gumby.cc.wmich.edu>
Source record: 169679

A few days ago, someone (I think it may have been Hutch) inquired about the German read-me file that came with the demo package for MagiCMac. It explains how to get things set up, and they were looking for an English translation. Below is one that I whipped up, which is freely distributable (at least as far as I'm concerned), but ASH still holds any possible copyright, since it is a "derivative" work (i.e., a translation).

Any errors are my fault, although I think it's fairly accurate. Possibly some of our native German readers could take a peek at the original file and this translation and let us know if I botched things up too badly.

Hopefully, this will be of some help to people...

- Mark

~~~~ cut here ~~~~

(NB: Translated from the German document "Bitte lesen!" accompanying the MagiCMac demo, by Mark O'Bryan on March 7, 1995. My apologies for any roughness or inaccuracies in the translation.)

MagiCMac demo version of January 3, 1995

Introduction:
MagiCMac makes it possible to run MagiC compatible programs on Apple Macintosh-computers with 68030 and 68040 CPU's. MagiCMac works in parallel with System 7.x and is started like a normal Macintosh-application. All programs, which contain no direct hardware accesses, are generally compatible. Programs which bypass the operating system (e.g. want to grab onto the Centronics-port or the Midi-interfaces), will not run and must be adjusted by their maker.

You can receive the full version of MagiCMac for 298-DM either directly from Application Systems Heidelberg (post-office box 102646, 69016 Heidelberg, Tel. 06221 300002, fax 06221 300389) or at your local dealer.

Requirements:
To test the demo version you need a Macintosh with 68030 or 68040 CPU, on which System 7.x is installed. MagiCMac (presently) does not run on PowerMacs (also not in the Emulation). We also recommend 8 Mbyte RAM for meaningful tests. The demo version makes 4 Mbyte of it available for programs.

Installation:
Simply copy all files of this diskette onto your hard disk.
~~~~

Starting MagiCMac:
The demo version is started with a double-click on the MagiCMac demo-Icon. When the program first starts, an information box appears, which can be left after 5 seconds with a click on OK. Then two further dialogs, which can likewise be acknowledged in the normal case with OK. A short time later the familiar Ease-desktop appears.

In Case of Problems:
If the message "Not enough physical memory free" appears at the start of MagiCMac, it may be that you have virtual memory enabled. In principle, MagiCMac manages with virtual memory, however in the MagiCMac-System dialog under "Maximum entire"[?], the entered memory size may not exceed the size of the physically available memory minus the size of the system.

Therefore, if you own a Mac with 8 Mbyte RAM, in which the system occupies 4.5 Mbyte, you must provide an accordingly smaller entry in the system parameter box of MagiCMac under "Maximum entire" (e.g. 3000 Kbytes). For this purpose, start the MagiCMac demo once more with the Option key (Alternate-key) pressed. Then the corresponding box appears immediately. If other problems should appear at startup, it is advisable to start the Mac once without any system extensions (hold the Shift-key down when starting the computer). Then the demo version should at least be able to be started.

Shift between MagiCMac and MacOS:
You can change between MagiCMac and the MacOS at any time. For this purpose press the key combination Command-W. To return to the MagiC-environment, click on the MagiCMac-window and choose the selection button "MagiC".

The right mouse button:
Since the Macintosh-mouse provides only one button, the right mouse button is simulated through simultaneous pressing of the mouse button and the Command-(Apple-) key.

Ejecting Diskettes:
You can eject a diskette by pressing the key combination Command-Shift-1. Alternatively, you can change into the Mac-environment with Command-W, and then click on the "Eject" button in the MagiC-window.

Exiting from MagiCMac:
To leave MagiCMac, press the key combination Command-Q. Then all running MagiC-programs and MagiCMac are terminated. In the full version you can also return to the MagiC-environment at this point.

Simulated keys:
Keys which are not available on some Macintosh-keyboards, are simulated under MagiCMac with the following Shortcuts:

Function keys F1 to F10: Command-1 to Command-0.
Shift-Function keys are not supported at this time (also not on the expanded keyboard!)

Command-H: Help
Command-E: Insert
Command-D: Delete
Command-U: Undo
Command-C: Clear Home

Differences between the (limited) demo version and the full version:
- At the start of the demo version an Info box appears, which can be left after 5 seconds.
- Also, every 90 seconds the previously mentioned Info box reappears.
- The demo version automatically terminates itself after 10 minutes and must then be started again.
- The applicable working memory is limited in the demo version to 4 megabytes.
- The demo version supports only the C: partition.
- In the demo version no external AHDI-hard disks can be accessed.
- Also mounting of further Macintosh-file and/or-drives (e.g. CD-ROM) is not possible in the demo version. If you want to try files of a CD under the MagiCMac-demo, you must have already copied them into the MAGIC_ C-folder on the hard disk, while in the Finder.
- The Clipboard size for data exchange between MagiCMac and Mac OS was limited in the demo version to 1 Kbyte. With the demo version it can not be printed.
- Various additional programs, like e.g. the Debugger Templemon; VT52 to allow the parallel start of several TOS-applications; and the Icon constructor are not contained in the distribution of the demo version.

For further information please read the document "MagiCMac F&A".

One guy already mailed me *directly* about this, and I will repeat what I said to him, in a word, yes. The reason ? In the original post, there was a large amount of valid information that is important for the rest of the community to know - that a particular dealer is not up to scratch when it comes to handling with customers. To cut any of it would have made been hiding the truth, and my one line was also a valid statement. Why not have a go at the idiots who come here perpetually posting page upon page of crap that doesn't belong here ? e.g. "PCs are better than STs, get a life..."

Have a nice day
S.Lai :)

P.S. Yes again, I am fully aware that some _pay_ for net access.

Heeheehee ! :) :)

|> Atari are notorious for their crappy manuals. Get hold of a text file

Atari give what you pay for. My cousin's 520STE has the naff old STFM manual
with an STE addendum sheet (i.e. "By the way, we've added these bits" !) and
the quality of the case moulding is not brilliant. My MegaSTE has a really
well moulded case (real smooth, consistent colour, and no wavy bits when you
hold it to the light) and an excellent manual. Ho hum...

|> ST Tour would also help; it's a program by Atari that just shows you the
|> basic operation and lets you play around with the mouse and window gadgets.

I still play with this occasionally, for fun !

: In article <3j2o6p$cj4@news.doit.wisc.edu>
: v_white@ece.wisc.edu "Victor White" writes:

: : Friends
: :
: : I recently purchased a bare bones Falcon, and I'm having trouble
: : installing an external hard drive.
: :
: : I started by installing the AHDI.PRG in the /auto directory.
: :
: : Thus, when I rebooted, it recognized the hard drive, I got the message
: :
: : Device 0 - Micropolis
: : Device 1 - Maxtor
: : Not Boot loaded
: :
: : (which is very hard to read as it flashes on the screen only a tiny
: : fraction of a second)
: :
: : The "not boot loaded" command is reasonable, as I was booting off the
: : floppy.
: :
: : Then, when I finally get to the gem desktop screen, I only have the two
: : floppy icons, trash icons, and what appears to be some generic
: : hard disc icons (for drives D: and E:), which are there regardless
: : of whether I have the scsi stuff connected or not.
: :
: : At this point when I run the HINSTALL.PRG, and do an install,
: : I see no drives highlighted as being available for mounting.
: : All I see is a matrix of drives, up to about H:, which are all
: : in "Half-tone" sort of signifying they aren't available for mounting.
: :
: : I am ignored when I click on them.
: :
: : I can quit the program and go back normally to the desktop.
: : But there's no hard drive installed.
: :
: : There's no cherry bombs or anything. Just no available drive.
: :
: : Any ideas??
: :
: :
: I suppose it is a stupid question, but is the drive formatted? Is the SCSI

: id jumper/switch set correctly? Are you using a SCSI or IDE drive. Is the
: software set correctly for it? Is the hardware compatible?
Try booting with nothing in the auto folder. Then run AHDI, it should mount the SCISI drives
then use HDX to format/partition (if it isn't already done). In the last desktop-menu is an option
to scan all devices and put them on the desktop. Your SCSI drives should be on the desktop now.
Use Hinstall to install the boot software

Message-ID: <3jpef3$r32@osiris.wu-wien.ac.at>
Source record: 169687

I do abaoslutely agree with Roger on that subject. A lot of German
software companies could do commercially much better, if they would have
English Docs, English .RSC files and English help files. As most of these
people do know English, BTW, it is just out of commodity that they do not
work on English versions. This maight be also due to the fact, that
a) for many years we had tto distinctive ST worlds, one with B/W monitors
(Germany, Austria, Switzerland, Holland) and one with Color monitors (the
rest of the world).
It is a shame that in the EU it is not posible to obtain aN English copy
of Tempus Word, for example.
I also think that some do not see the need, as most of those programmers
actively discuss only in the Mausnet, a networked BBS system, and not in
the usenet. Very few regularly read comp.sys groups.
However, if people want to discuss on that subject, you can force those
programmers to do that, as some of the important newsgroups are also
crossposted in the usenet, such as
maus.sys.atari.software
maus.sys.atari.hardware
maus.sys.atari.talk
maus.sys.atari.f030
maus.sys.atari.desktop
to name just a few.
Kick them into their asses :-)
BTW, the same ignorance applies to the UK and American software
companies. Or how many games have you seen adapted and running on B/W
monitors? Again missed opportunities.

Regards,

Alfred

4168. Mint termcap/term questions

Newsgroup: comp.sys.atari.st
Date: 1995-03-10 12:03:16 UTC
From: mattk@netcom.com
Message-ID: <mattkD5845G.78B@netcom.com>
Source record: 169699

Hi...

I'm trying (mostly in vain) to have something other than vt52/tt52. They work fine, but when I am running a slip connection, pretty much everything I do requires vt100. I've goofed with termcap, ttytab, mint.cnf, all to pretty much no avail. Most times, I get a message along the lines of term 'nil' doesn't exist, using "dumb" mode.

I'm running login to tcsh....

Another request is whether there's anything for mint along the lines of tset...a program that lets you change the TERMCAP env variable "on the fly".

Thanks in advance
Matt

4169. Mint-X problem

I sent a message out along the same lines as this one, but it seems to have disappeared. Either that or I am going to get flamed for putting it in the wrong group!

When I run xinit, I get a message "can't set font paths"...then "can't load fixed.bdf"...anyone had this problem?

The rest the message dealt with setting groups and the like. I've figured that one out pretty much, so sorry to have bothered anyone if the message did get out....

Bye for now,
Matt

>You have XHDI version of at least 2.10 (or was it 1.10??? Something like
>that anyhow.) Don't ask me what XHDI is.

XHDI is the eXtended HardDisk Interface Standard which was defined in 1992.
Hard disk drivers that support XHDI offer a lot of useful functions for
getting information about the hard disks connected to your Atari and have
several calls which enable high level programs to communicate with hard
disks in a convenient way.
You find the complete XHDI documentation on ftp.uni-muenster.de in
pub/atari/Docs. The documentation is available in English and German.
Drivers supporting XHDI are HuSHI, hdpSTACK and HDDRIVER.

4171. Logo Program Wanted

Newsgroup: comp.sys.atari.st
Date: 1995-03-10 12:21:00 UTC
From: gary.ratliff@starnetbbs.com
Message-ID: <9503100634225562@starnetbbs.com>
Source record: 169602

In a set of recent purchases I have learned that Atari supplied both BASIC and LOGO with the very earliest (1984) Atari ST computers.

Later they just supplied the Atari ST BASIC language. As one of the books I received dealt with using ATARI LOGO, I wanted to learn is any of you might have this program and be willing to sell it.

I have gone thru the BRE calatog to try to deetermine if Atari placed this in the pd as they did with the excellend CP/M emmulator package. However, either I didn't read closely enough or there was no Atari LOGO listed.

If you wish to part with an Atari LOGO.PRG disk then let me know what you would consider as payment. TYhen I can determine how much I mightr want this program based on that.

the e-mail should go directly to gary.ratliff@starnetbbs.com

TD>I guess what I'm looking for is a PC (or Mac) program which will
TD>read from and write to Atari disks. Any pointers?

You really don't need a special program at all. Just use disks which you have formatted on a PC (720k 3 1/2"). [TOS 2.06 even writes directly to 1.44 3 1/2" disks] Once that is done just take the disk to a pc and eddit text files etc.

If you have a collection of software on earlier single sided and double sided Atari format, then you may convert by making a ram disk and reading to this area. Once here place a pc formatted disk in the drive anc copy to that. Empty the ram drive and then reload it with more material and recursivly follow this process till all the conversions are done.

It is even possible to run Atari programs on a pc if you get the GEMULATOR.

:

: Regards from Norway (Land of the Vikings)

: -Geir Fossum (geirfo@ifi.uio.no) - University of Oslo, Norway.

I believe the ftp sight "ftp.uni-kl.de" has a program called "ORCS" in
their archives.

I use it and boy is it nice. I was using Mark Williams RCS, but boy was
it outdated. ORCS looks a lot like it, but allows you to set any or all
bits in OB_FLAGS, OB_STATE, etc... It's a general RCS for any language.

If it's not on that sight, then I'm sure Archie will find it.

Rich

Source record: 169504

I also think a get-together (I have deliberately not used Conference) would be a good idea, but emphatically think that initially the first should be a low-cost stand-alone affair, more like a simple, spacious computer fair.
Or even run on the back of an already arranged fair.
And the original writer nearly got it right by suggesting Manchester! The computer fairs at Trafford Park, Manchester are so crowded, parking and queuing to get in are horrendous.

But those at Haydock Park, although well attended, are more relaxed and _accessible_ which is surely what is wanted?

Haydock Park, as a racecourse, has unlimited parking; and adjacent to the M6, and close to junctions with the M62/3, M55, and M56, has excellent road access for everybody. Even the hardy Scots make it down to there, which should surely put those soft Southerners to shame!
Oh, and it is on Danny's doorstep. [i.e. near Lancaster]
Come to think of it what could Lancaster Uni. lay on for a low key taster?
My thanks for reading this, my first posting, right to the end. jC.

But most people in the UK are (saddly) bad at languages.... Also, the way that many games work is completely dependant on colour....

Anthony

>> have been _very_ few registrations if any. Certainly no international ones.

> Okay Dan.. Let me see if i get this right. You all agree that shareware
> should have been unlimited, but due to low registration you have implented a
> few limits. And because you don't like the word Cripple, you say it's still
> shareware.

In my opinion, it is still shareware. You get a the program for free and
if you want to use it then you should send me the registration fee. The only
difference is that you can't use it to its full potential without paying.
This simply prevents abuse of the system.

> Basicly there is no such thing as real shareware any longer, (according to
> of people here). Where does this put the honest people ? I know Hutch would
> probably say, that honest people don't care. But my opinion is, that they do
> care wether or not they can test the software.

Of course it is essential that you test the software. Thats why only save
is disabled. You can test all the editing functions to your hearts content.
Maybe you can't test the save routines, but heck if you pay and they
demonstrably don't work then I'm going to give you your money back - if I
don't then I would get raked over the coals on the networks, and how many
registrations would I get then?

I object to over crippling too. In principle I object to all crippling, but
I just don't think the majority of people are honest enough to trust them
with no crippling at all. Not registering shareware isn't exactly the hottest
crime on peoples minds. Heck they copy music CDs without batting an eye.

> According to shareware rules, you pay the fee after used it for a while, and
> if you find future use of it, (we all agree upon that i hope). When crippling

Yes, I agree with that.

> a program, i would say you as an programmer overrule the normal shareware
> rules, and therefore can't put any obligationes the users any longer, (you
> have already put in a limit), but still you stay at the shareware definition,
> which then means, the users end up with a limited program, and still the
> same obligation. Thats not fair, and specially not fair to a honest user.

The obligation is the same. You test the program, and if you like it,
you register. As a little bonus, when you register some limitations go away.

There is nothing stopping you for example using SuperSam simply as a sample player - after all it is only teh save function that is disabled. But doing so - using it without registering - is not true to the shareware idea.

> Why i want you to use the crippleware name insted, is simply because there
> is no rules for crippleware, (If you like you can use another name such as
> BetterWare insted. Thats not important), and then you can still stick to
> the limits in your programs.

There are no rules for shareware either - just a generally accepted idea. And it seems that the general idea accepts crippled shareware as ok.

(bugs are under attack :)

1) Linux requires an FPU
2) Linux doesn't work on falcons with mixed IDE and SCSI drives
3) Linux doesn't run TOS or GEM programs
4) Linux uses about 4 times the disk space
5) MiNT is source level compatible with UNIX anyway.

>

Yes! I am 22, and got a hold of some old (didn't it die early, like 1989?)
copies. The people really covered some great things, and it had a lot of
philosophical issues about platforms, support, etc. There was a lot about
programming, also.

This shouldn't be a problem with all the free UNIX programm's. You only
have a problem with very specific (hardware) tasks.

> 4) Linux uses about 4 times the disk space
> 5) MiNT is source level compatible with UNIX anyway.

This is not true, think about the semantics of the unix fork() call.

k> want, just not shareware. Infact, the best name i could think of right now
k> is a demo. (Now i will probably be hang by alot of people in here 8-)).

To add my humble opinion, I think Crippleware is a program that you
cannot use reasonably without paying to the author. Shareware programs
on the other hand can have some minor features disabled that aren't
that important. For example, a program that has save disabled
is in my opinion crippleware.
I have written Kivi QWK, I call it shareware although it has few
features available only for registered users. They are really minor,
unregistered users can not use Taglines (who uses them anyway? ;-))
and there was some other I can't remember. Otherwise fully functional.
Is that crippleware? Or even better, a demo :-) ?

Message-ID: <D58oJ1.M1p@freenet.carleton.ca>
Source record: 169643

I have an old, original Ultima 2, with docs and map, that I've been playing around with. I'm looking for a few hints/tips, specifically:

How much experience do you need to go up levels

How do you raise your stats? I have been buying HP's from Lord British, and have gotten weapons and armour that I don't have the stats (ST+AG) to use! Do you have to Transact with LB to go up levels? Are there specific places to raise stats? Thanks!

Hi Hutch!

H>That's just a question of semantics. 'A rose by any other name...' and
H>all that rot. You seem to have lodged in your mind a very specific
H>definition of 'shareware' as a fully-functional program. Eric and I
H>tend to disagree.

The point is that the original definition of shareware was s.th.
like `nonlimited, commercial software, freely distributed'. This definition
resulted in a very positive connotation of `shareware'. When authors realized
that not all `customers' were to be trusted they redefined shareware into
`crippleware' in order to conserve the positive attitude. Nice marketing
trick.
Personally, I wouldn't mind if authors looked for another attractive
expression instead of eroding necessary standards. How about `testware'?

Cheers,
Dirk.

well, you know what they say, there is always someone in the bin that will
make a liar
out of you (grin).
You COULD tell it to Jim Dawson, author of AmiQWK, offline mail reader for
Amigas. I registered that (and other) software with him and others. I won't
deny that I haven't registered EVERY shareware or even demoware program, but
on the other hand, I rarely ever use 'em, and can live without them. Your
piece of programming sounds very useful, and I believe you do have the right
to be compensated for your efforts, and rightly feel cheated since its obvious
that that kind of program (your printing prg) is very useful and doubtless
used all the time. I know I'd use it, if it worked on my machine.

There are bad users out there for every system, while klones and macs have big
software companies, Atarians and Amigans are similar in that they both have
good PD and Shareware writers working to expand the machines' capabilities.
Your cripple was devious and crafty, I hope it brings you pleasure, I don't
blame you for feeling down about it, but don't lump ALL users into your 'hate'
category. There are many of us who DO register the ware, if proven to be
really useful.

> : :)

Ha ha!!! Your egocentrism is entirely too laughable, Bob. ***OH...OK EVERYBODY.....BOBR SAYS ANYONE WHO ARGUES WITH HIM IS A TWIT, AND OF COURSE, HIS EGOCENTRIC OPINION IS THE ONLY ONE THAT COUNTS. Ok...gee, I'm sorry BobR....I forgot that your Atari-bashing opinion counts more than anyone elses....and that you somehow "own" comp.sys.atari, and that you're free to come in there and Atari bash, and it is your final word on "ST vs PC" that everyone respects. How silly of me to not know this. After all, WHY SHOULD I EXPECT YOU to post anything INFORMATIVE OR INQUISITVE ABOUT ATARI COMPUTERS in comp.sys.atari? No, that's not what comp.sys.atari is for. It was created for you, BOBR, to come in and trash Atari computers, and call Atari users twits, wasn't it? IN YOUR PEA-SIZED NOGGIN, LITTLE FELLOW.

I STATE NOW, AND FOR THE RECORD, THAT YOU, BOBR ARE OUT OF LINE. YOU HAVE ***NEVER*** (IN WEEKS) POSTED SOMETHING INFORMATIVE ABOUT ATARI COMPUTERS, OR ASKED ANY QUESTIONS. WHAT THE HELL ARE YOU DOING HERE, THEN?? READING THE MESSAGES? I THINK NOT- YOU'RE POLLUTING THE PLACE, SPOUTING OFF, AND YOU ATTACK ATARI USERS WHEN THEY DEFEND THEIR CHOICE OF MACHINES??? Definite proof that you need to have your head examined.

> :
> : BobR
> :
> Having read it all, I'd say you didn't come out of it covered in glory either.
> I thought James made as many, if not more, cogent points than you did, yet
> your responses consisted merely of insulting him, not refuting his claims.
> If this is classed as "good argument", then remind me to kill everything
> else of yours.

Thank you, Barry. My posts may not have been of the highest quality all along, but what can you expect in a flame war? I JUST WISH BOBR WOULD TAKE HIS FLAME WAR TO comp.sys.ibm.pc, and GET OUT OF HERE. I don't like to participate in general flame wars, but I can't let BOBR continue

unopposed on what little turf of the net that I enjoy - comp.sys.atari.

BOBR: Why do you resort to name-calling like "twit" to anyone who opposes you? You can't support your arguements, can you? Why don't you just POST ABOUT ATARI COMPUTERS, READ SILENTLY, or GET OUT? CAN YOU NOT SEE THAT NOBODY WANTS TO READ YOUR KIND OF POSTS HERE??? Find another "audience" to spout off to....you won't find it in comp.sys.atari.

James

I found it on the berlin FTP site for some days ago, thanks anyway!

And, Yes. It's good, far better than GER2ENG. But it can get a lot
better, such as the interface. However, I don't complain (eh...
well... I just did) it's the best so far, and 5 pounds isn't anything
to argue about, and as long that shareware donations will keep him
developing the program, I'll be more than happy to support it.

It is for the most part true; Atari are still manufacturing Falcons, but
they are no longer supporting any other machine. They are currently behind
the Jaguar 110%, so that is where all of their attention, and most of their
resources, are concentrated.

: Well try nos, you can find it on atari.archive.umich.edu or one of its
: mirrors, take the file stnet110.. or something like it (in one of
: the Network directories). It is the package used by some internet
: provider in the uk.
: I wasn't able to test it yet. But the thing looked fine.
:
: Ric
:
:

Ric's right, nearly. NOS in stnet110 is v0.41. v0.42 is out as an
improvemnt. The package is based on KA9Q ported from the PC world. It
understands both SLIP and/or PPP. I can't be certain of how you cope with
POP mail, but there is a FAQ included in the docs.
It can be a bit awkward to set up and understand, but it works as an
Internet client. I'm using it here :-)
You can get both archives by ftp from ftp.demon.co.uk in the pub/atari/
directory if you'd prefer.

Shareware; experience and overseas payments.

For shareware payment I send a sterling note(s) of the same
numerical value as is requested in dollars. For sums up to
30usdollars this leaves the recipient with enough of a surplus to
cover bank and inconvenience charges, plus any extra mail costs
for return package.
As an alternative, at this end it is very simple to go into any
travel agent or large bank and purchase dollar bills, or notes of
any western European country. Of course in the UK it is deemed
unwise, but not illegal, to put cash in the mail.

Interestingly this means you are extending as much trust as the
Shareware programmer did when _he_ put _his_ product on this market
that is based on trust and honesty.
Even more interestingly, out of four shareware payments, two of
which were made like this, only the gentlemanly Mr Henry Cosh
replied, with extreme courtesy. The other three presumably took the
cash, but did not reply.

**** CAN YOU HEAR ME IN ALASKA ???? ****

This did not upset me too much being of a sanguine nature; although
it did with another four to whom I wrote before I considered
paying, asking if awkward features had been smoothed out in the
fully registered versions. Not one reply to those queries.
I accepted, until now, the explanation suggested to me by The
Upgrade Shop; that they could spend all day replying to letters,
and get no work done.
(incidentally, unsolicited testimonial; first rate service, low
rates, good advice; they were not one of the offenders).
However having read the continuing debate over "crippled", I can
see how much time the programmers can spend on topics of interest
to themselves.

How does my experience tally with other users?
Four queries, no replies. Four payments, one response, but that of
good value, outweighing the others.
Greetings to you all. jC.

>This simply prevents abuse of the system.

I know thats the reason. It's just that in my opinion it removes the shareware
definition. (How come i have a feeling i'm talking to programmers only 8)).

>Of course it is essential that you test the software. Thats why only save
>is disabled. You can test all the editing functions to your hearts content.
>Maybe you can't test the save routines, but heck if you pay and they
>demonstrably don't work then I'm going to give you your money back - if I

>registrations would I get then?

I know Dan. Thats not what i'm talking about. You as well as many others
have probably seen other shareware programs with more than just a disable
save funktion.

>
>I object to over crippling too. In principle I object to all crippling, but

Glad to hear that.. then i'm not all alone here 8)

>I just don't think the majority of people are honest enough to trust them
>with no crippling at all. Not registering shareware isn't exactly the hottest
>crime on peoples minds. Heck they copy music CDs without batting an eye.

You may be right here, but that doesn't cover for your change of the shareware
definition. (according to my definition of shareware).

>The obligation is the same. You test the program, and if you like it,
>you register. As a little bonus, when you register some limitations go away.
>There is nothing stopping you for example using SuperSam simply as a sample
>player - after all it is only teh save function that is disabled. But doing
>so - using it without registering - is not true to the shareware
>idea.

But you have already made you're quarrentee that people will registre, if
the want to use it for full. So why care if some people are using it, with
the limti's, without paying ?

>There are no rules for shareware either - just a generally accepted idea.
>And it seems that the general idea accepts crippled shareware as ok.

Hmm!.. I know i don't count for the general use, but i do not agree 8)

>
>(bugs are under attack :)
>

Glad to hear.. The samples will be on hold at my system when you read this
message.

>fee, they get the full version (and usually some extras such as printed
>documentation, utilities, or a free update). How is this unfair? Only if
>the limited version is not clearly designated as such would I agree.

It is unfair cause he will have a problem chosing, when there is limits.
He could ofcouse just dump it and try look for something else.

>
>> And it's not "nag" box's and save disable features i'm talking about
>
>Whoa! Wait a minute. At first you said shareware should have NO imposed
>limitations and now 'nag boxes' and 'save disable' are OK? Which is it?

'Nag boxes' are not really a part of the program.. It could have been
an intro in a game insted. Though i could give you at least one example
where a 'nag box' is becoming a problem.
When i accepted on the save disable, it's simply because i trust the
programmers are capable of doing such a work, without any major problems.
But then again, it could become a problem, (such as in converting utilities).

>
>If it's just the naming conventions that bother you, so be it. Come up
>with another name (hopefully something with less negative connotations
>than 'crippleware') and convince everyone else in the world to use it.
>Of course, how you intend to do that might prove interesting. :)

It IS just the name Hutch, (finally you start to understand). But for some
how i have a feeling i wouldn't get far with my convincing 8-/

>
>While primarily a group of commercial software developers, the IAAD

>user decides it meets his/her needs or after a certain period of time.

So far so good 8)

>Whether the distributed program is fully functional or not makes no
>difference in the classification. It _should_ be functional enough to
>allow the user to thoroughly test it, of course, and any limitations
>clearly identified, but that's up to the author to decide.

And now we have the problem. Who are in charge of saying a program
is functionally enough to cover the shareware definition. I guess this is
rather individuel. And as you put it, it's up to the author.
By using the above definition for shareware, you are breaking of the
shareware definition, (read, my definition), to suit the author.
When you pay for such an program which contain limits, you pay to get rid
of the limits. Thats why i say; if you can live with the limits, there should
be no obligation saying you have to pay, since that will overrule the limits.

>
>'Demoware' is used to describe demonstration versions of commercial
>software that has been minimally limited (crippled, if you will).
>It is freely-distributable (the authors hope you will!) but you can
>only obtain the full version from the developer, dealer or distributor.

Hmm!.. Where would this put a program like Freeze Dreid terminal, which was
announced as an demo ? (I know it's no longer supported - It's just an
example). As far as i remember, it wasn't commercial distributed.

>
>'Freeware' is just that... the author may still retain distribution
>rights, but he doesn't charge individuals for it.

Yep.

>
>'Postcardware,' 'chocolateware,' etc, are simply fun categories of

>Is there an alternate package, or at least word processor, that will
>allow the mixing of text and graphics on-screen??
>
Actually, only AtariWorks v1.207 has the black page syndrome, and
only on Canon inkjet printers (as far as I know. I use AtariWorks
1.207 on a Star 1020R, a Canon BJ10SX (BPS), a Deskjet 540, and a
Roland Raven. The Canon gives the black page syndrome, but all other
printers work fine, and if I upgraded my NVDI, I'd not have the
problem at all.
I have no problems with the Deskjet, so I'd hazard a guess to say
that it's not AtariWorks doing the screwing up for Chris Herborth.

As for alternate programs that will mix text and graphics,
Calligrapher, Papyrus, 1st Word Plus, WordFlair, PageStream, Calamus,
Write On!, TimeWorks Desktop Publisher, and That's Write are only a
few programs that can do that. (There are many more, but this serves
as an example.)

If you're worried about AW, just use v 1.2 (I still don't know
what the differences are between the two revisions besides the BPS.

Have a happy!
Leslie

4224. Printer drivers needed

Newsgroup: comp.sys.atari.st
Date: 1995-03-11 04:57:21 UTC
From: wells_s@ix.wcc.govt.nz
Message-ID: <3jrajh$esu@golem.wcc.govt.nz>
Source record: 169512

I'm after printer drivers for a Xerox-4045 Laser printer
(Parallel/Centronics). for one or all of the following:

Atari-Works
Pagestream
1st-Word Plus
GEM-View

Mainly Pagestream (v2.2b). It prints text perfectly from the "print"
command in GUCK or whatever text editor I happen to be using (EdHak
is great :) but I need _something_ to enable it to print graphics. It's
not HP compatible, so no luck there. There was a Pagestream driver for
a Xerox-4020 but it didn't work.

A driver for a Xerox-2700 should work just as well. The drivers disk
I have for Windows has "Xerox 4045-50 (XES)" on it, so presumably
a driver for a 2700, 4045, 4046, 4047, 4048, 4049 or 4050 would be okay.

I can accept any method of getting it, and archive format, and pretty
much any encoding method.

I need this _urgently_!

I know this subject is getting beaten to death, but I've got a question
that I can't seem to answer myself... Can someone tell me what settings
have given them the most success when using DRIVEIN and SCC .PRGs? I
keep getting ZModem re-positioning errors when doing uploads to various
local BBSs. I've confirmed that other callers have successfully ZModem-ed
files to these boards, so I can only presume I have my settings wrong.

Thanx!

To: mforget@elfhaven.ersys.ed
Michael, you commented on how adding an "annoyance" to a shareware program had increased registrations:

MF> An objective comment; since adding a "nag" box to MasterBrowse and
MF> ESS-Code, registrations have increased noticeably. They are still not
MF> flooding in, but they are more numerous than before. That is the only
MF> thing that I did to the program. If I had, say, disabled other
MF> features, what would have happened? I'm not sure (and I do not plan to
MF> do this, BTW).

I did something similar with "Runner", a menu-driven desktop replacement program. I used to offer various "add-ons" as an incentive for people to register, and ended up providing everything but with delays added in a few places so people could still try out the software but would not find it as useful as it would be without the delays (and the delays were clearly stated as such when they appeared!). I developed a key system where registered users would get a key in the mail that would let them use any new versions of the software (the key is simply a number that combines with the serial number of their registration to "unlock" the software - eliminating the delays).

I thought I had the perfect system, allowing full use of the software, a way to try all of the functions and add-ons, and an easy-to-use key system that works for one person at a time. Well, since I did all that, not one person has registered..... Maybe the "key" system was easy to break? Not very likely. Still got hundreds of downloads, just no more feedback. There were some fairly minor bugs that showed up under very narrow conditions, and long-time users pointed them out. I still don't know what happened, except that maybe no new users came along and I had already captured all the cutomers I would have on prior versions....

I still think shareware is a viable marketing alternative, although I did _much_ better when Antic sold one of my programs through their magazine. I only got $2.00 per copy sold, compared to $10 on my shareware stuff, but I made enough to buy my ST system and a synthesizer. It seems that crippleware is a good idea, but I know it frustrates me when I download programs done that way. And yes, I _do_ register a lot of the shareware I use!

RS> The Author of Freedom are trying to be the best there is,
RS> there comments to me is that SElectric would be number one in the world,
RS> I would state that UIS III is..

Roger, I use UIS III all the time and, although I've tried other file selectors "just in case", nothing has compared to UIS III in terms of ease of use, dependability and fexibility. We routinely tell newcomers in our Atari user group that UIS III is the very best upgrade you can do on your Atari computer. I really miss it when using my computer at work (an IBM 486 with 16 MB RAM and Windows 3.1). Sure, it's a simple matter to "Alt-Tab" over to File Selector, find the same directory, then do the rename/delete/print/whatever from there, but I would rather have the immediate gratification provided by UIS III!

I haven't tried the Freedom selector yet (I did download it though, gee, I hope the authors don't consider me a pirate since I haven't sent in my money yet! -- sorry, that was a reply to another string of messages in this topic)

>command in GUCK or whatever text editor I happen to be using (EdHak
>is great :) but I need _something_ to enable it to print graphics. It's
>not HP compatible, so no luck there. There was a Pagestream driver for
>a Xerox-4020 but it didn't work.

I have the source files for all Pagstreem printers but they stated that
it is not in the PD but are on GEmnie...

There is 4020BW.s and 4020C.s

Does this Laser have enough memory to do graphices, most only have 500k and
that is not enough for grahics work...

I think most Laser printers are only sold for Text work with just enough
to do that...

4231. Re: AV Protocol Docs in ENGLISH

Newsgroup: comp.sys.atari.st
Date: 1995-03-11 07:29:22 UTC
From: barheath@heathen.demon.co.uk
Message-ID: <950311Z072922.536barheath@heathen.demon.co.uk>
Source record: 169521

In article <johan.nordlander-0903951710260001@nod.eng.umu.se>
johan.nordlander@engelska.umu.se "Johan Nordlander" writes:

:
: To me this seems a wee bit unfair. Outside the Anglophone contries a very
: common view is that Americans, Britons, Australians, etc., think that the
: world and every one speak English.
:
A Swiss friend once told me that in continental Europe, the common joke is
if you speak three language, you are tri-lingual; two languages and you
are only bilingual; one language and you are English!
There's more than a grain of truth in it, and I'm not going to attempt to
justify the habit
:
: There is of course an alternative solution -- one which most of us
: non-native English speaking people out here have used for decades -- to
: learn a foreign language. At least enough of it to be able to extract the
: info you need when dealing with topics you are interested in.
:

Regrettably, as in most thing the origins are lost in the mists of time, but
I think you'll find that because much of the development work for computing
took place in England and the US during WWII, then English became the lingua
franca of computing, certainly in mainframe terms. Now that the desktop and
smaller units are common, perhaps there should be a move towards more
internationalisation. It'll be difficult though. Look at the trouble we
have now with different keyboard layouts. The net (in its current form)
would collapse as far as the casual user is concerned too.
Most international activities require some form of common language, and in
computing, as in most science, it seems to have become English. Native
English speakers like me just have to accept it as fortunate. The Yanks,
Ozzies and Kiwis can generally get by in English, too, as their mother
tongues are based on it <g>

A certain level of English is necessary anyway isn't it? Aren't most
computer languages based in English for their commands and structures?
Maybe the best solution is for those whose mother tongue is other than
English, when writing programs, at least get the basic instructions into
some form of garbled English, enough for us to be able to comfortably work
out what to DO with the application. Detailed technical history and code
explanations can be left in native; anyone who is _that_ interested will
puzzle it out somehow.

Personally, I don't mind trying to put strangled English into grammatically
correct versions, but my French is basic conversational, my German can get

me beer and petrol, whilst my Italian usually only gets me blank looks! I admire anyone who speaks more than one language well.

Gruss, merci, benvenuto, e gracias

Could someone please upload this program to an ftp site and then post the location? It was up on ftp.uni-kl.de for a few days in the incoming directory, but when I pulled it down it was corrupted, and then disappeared a few days later off the site.

Also, a few weeks back, Roger Sheppard posted a request concerning good PD/Shareware games, and someone posted that they would upload an RPG that was reminiscent of Zelda (or some other NES game). Did this ever happen? I've not seen it anywhere.

Message-ID: <3jrnoi$aq2$2@mhade.production.compuserve.com>
Source record: 169527

One last time, James.. then I'm done wasting any time at all on you...

>YOU HAVE ***NEVER*** (IN WEEKS) POSTED SOMETHING INFORMATIVE ABOUT ATARI
>COMPUTERS...

James, I hesitate to call you a liar in front of everyone.. but it's really
a tossup... do I really want the flamewar, or do I call it like it is..?

Either you simply don't know how to READ (and no, folks, this isn't any kind
of slam.. James has simply demonstrated that he ignores anything I've typed
without reading it, for whatever reason), or you simply don't know how to
comprehend what you read.

DO YOU EVEN READ THE ANSWERS TO THE QUESTIONS _YOU YOURSELF_ HAVE POSTED..?

Folks, I really don't want to take the time to go back and quote all the
messages just because of one twit (and yes James qualifies as a "twit"..
not everyone , as he claims, does qualify. Most people here are worth having
a discussion with because they can read, and can hold an intelligent
conversation. James is something special.)

However... James Woods posted a question asking how he could expand the
memory of his vingage 520 ST. And guess what..?

Nobody else posted an answer.. only this "Atari basher who should stay in
comp.sys.ibm.advocacy" posted an answer to his question. Did he read it..?
CAN he read it..? Apparently not.. either that, or he's lying in the previous
statement.

More recently, James Woods posted a question asking about the comparisons
between Atari computers and Amiga computers.

Among the answers to that question, I posted a fairly lengthy description of
all the various Atari computer models and the differences between them. Did
James read that answer..? Apparently not.

I also posted an answer to his same question, comparing the sound capabilities
of the 1040STe to the Amiga 1000.. did he read it..? CAN he read it..?
Apparently not.

Did James read my offer to send out copies of a list of over 800 CD-ROMS that
are applicable to the Atari computer line..? Apparently not.

Did James read my answer to someone asking for the Atari Customer Service
phone number..? Apparently not.

Did James read my answers to the questions about using the GEMulator with
ST games..? Apparently not.

Did James read ANY of my posts in the Jaguar newsgroup about new products and new Atari press releases..? Apparently not.

CAN James read..? Does James WANT to read..? Apparently not.

This is a real waste of time, folks... James doesn't seem to like being labelled as a "twit"... but one has to wonder why he tries so hard to fit the profile.

James likes Atari computers... cool.. so do I.

James apparently has a lot of trouble working with IBM compatible computers That's really too bad.. I don't.

James seems to have trouble equating that with anything other than "Atari Bashing".. that's pretty sad.

James missed the point of most everything I tried to say in this exchange.

Oh well..

That certainly isn't going to stop me from helping Atari users every day, and stating my opinions.

As I said before... goodbye, James.

BobR

4241. Re: NEW ATARI MAG

Newsgroup: comp.sys.atari.st
Date: 1995-03-11 09:36:07 UTC
From: apb25@cam.ac.uk
Message-ID: <apb25.56.00099A63@cam.ac.uk>
Source record: 169530

Here are some ideas for articles in the new mag (definitely on the *MUST BUY* list):
a) hardware DIY - wasn't PAK 030 a magazine project before it went commercial?
b) Setting up complex programs/German programs (a summary would be helpful) eg. MiNT, GCC 2.6.1, Chimera...

Adrian (apb25@cam.ac.uk)

4242. Re: Translators..!!

Newsgroup: comp.sys.atari.st
Date: 1995-03-11 09:39:36 UTC
From: apb25@cam.ac.uk
Message-ID: <apb25.57.0009A93F@cam.ac.uk>
Source record: 169531

Why don't we start a translation scheme ? Where say a Geman person can take out all the surplus from the German docs and leave the essentials, then someone (preferably bilingual) could translate it to English, and finally an English person would tidy it up into correct English.

I'd be willing to participate although I've only done GCSE German, but RSCs are easy enough.

Adrian (apb25@cam.ac.uk)

4243. TCSH 605pl1

Newsgroup: comp.sys.atari.st
Date: 1995-03-11 09:41:41 UTC
From: apb25@cam.ac.uk
Message-ID: <apb25.58.0009B22E@cam.ac.uk>
Source record: 169532

Has anyone got TCSH605pl1 to work - I got it from a Geman site and it just crashes MiNT when I run it. Version 6.03(3?) works fine.

Adrian (apb25@cam.ac.uk)

: No Have some Brains and THINK...
: There is no hope in the world, even NeXt dropt out of none
: standard computers and from what I have read here about German products
: they are way over priced....
: Also Atari is no longer into Computers....
: So wake up People the Atari is DEAD.....
: Take the Pill and move to a real Computer, or how to live with the Bomb...

Oh, I see, I should run out an buy a really expensive computer that is
poorly designed, inefficient, and is extremely prone to crashing,
viruses, and general misfunction.
Just because the rest of the world chooses to utilize archaic
technology (that is, PC architecture) doesn't mean that I want to.
Simply because everyone else is doing it just isn't sufficient cause for
me to lower my standards.
Atari is out of the "computer" business for now - but I can't
think of any better way to show them that their efforts have been
appreciated than to support their existing computers. The Falcon, despite
its shortcomings, is designed the way that a computer should be designed.
It is a parallel processing computer with built in hardware for audio,
video, and all other forms of input output that few (if any) PC's could
handle.
Take this hypothetical example: Lets just say that you could get a
PC, and equip it with the following...
1) Continuous memory (not XMS, EMS, HIMEM, or other such rubbish)
2) OS in Rom (rather than on the hard disk where it is
succeptable to infection and corruption)
3) Genlocking and overlay capacity
4) Stereo 16-bit analog to digital DMA input
5) Stereo 16-bit digital to analog DMA output
6) 8 16-bit audio record/playback channels (up to 50kHz sampling rate)
7) Sound/DMA co-processor
8) 2 joystick/mouse ports
9) 2 analog controller ports
10) MIDI IN/OUT/THRU
11) Bi-directional parallel port
12) RS232C serial port
13) SCSI II w/DMA
14) Analog RGB/VGA/Composite video output
15) Digital Signal Processor with accompanying port
(up to 1mhz data transfer rate)
16) Television (RF) output
17) Localtalk compatible LAN port (up to 250k baud data transfer rate)
18) True-Color video (16-bit color) - 65,536 from 262,144 palette

19) Parallel, Multi-Processing design
68030 CPU
56001 DSP
VIDEL (true-color, overlay, overscan)
COMBEL (System management and BLITTER graphics co-processor)
SDMA (Sound with direct memory access)
CODEC (16-bit a-d, d-a converters)
Keyboard processor
20) Independent data and address busses
21) 32 Bit Data and Address busses at 16mhz
22) An operating system that is written to support all of these processors and input output types. (No stinking drivers)
23) An operating system that is not Windows (that is, no general protection faults or other such silliness)

Okay, so let's say you have a comparably equipped PC - and let's say you get all of these things running cooperatively (highly unlikely) - how much would it cost just for the hardware? And how about to set the thing up? Most computer techs in this neck of the woods charge over $80.00 per hour - lets assume that most of the general public isn't capable of installing all of these devices and accompanying driver software. How much will it cost to set up? How likely is it that the system is going to operate reliably with so many additions to the OS? Why would anyone want to endure such torture?
In any case, I'll hold onto my Atari until someone else indicates that they actually put some thought into the design of a new machine. That does not include putting a Pentium into a toaster and then adding other stuff until it does what you want it to.
On PCs, sound interferes with the modem, or the modem interferes with the mouse, or all three don't work and one cannot even access the system setup screen because some unknown driver is conflicting with the ROMS in the PC. This sort of nonsense should not be happening now, in 1983 maybe, but not now.
Hey, how about another little tid-bit: PCs only have 64k! Sure, with memory paging and swapping it may act like 640k - any you can even install a hardware virtual ram-disk so your PC can have megs and megs of what is not quite so accurately referred to as RAM. 64k, that's about as sophisticated as an Commodore 64. Motorola powered machines, on the other hand, have access to loads and loads of continuous RAM. If that doesn't provide enough help, the Atari TT and Falcon can also have Fast-Ram (which, I believe is 4x faster than conventional ram).
I hate being the owner of machine that has diminishing support - but at least I can take comfort in the knowledge that I chose a computer that was designed intelligently, and can still outperform most machines currently out and about (in practical day to day operation).
Back in 1987, when I bought my first Atari ST, If I knew the future, and what was to become of the Atari platform, I wouldn't have done a thing differently. I still would have chosen a computer that was powerful, affordable, and met all my needs (Word Processing, DTP, Graphing, Music composition, Computer animation, Graphic Design, CAD,

Programming, IBM and MAC emulation, Sound sample editing,
Telecommunications, Entertainment, and much more). I would still have
chosen and Atari.

******************************************************
NEWS RELEASE 16: THE TORONTO ATARI FEDERATION PRESENTS - ACE '95!!
******************************************************

==========================================================
ACE '95 *** IS ONLY 3 WEEKS AWAY *** ACE '95
==========================================================
LLLLLLLL EVERYTHING GREAT UNDER THE ATARI SUN! LLLLLLLL

*******
FEATURE EXHIBITOR > BEST Electronics of San Jose, California
*******
Parts, parts, parts, parts, parts, parts,
parts, parts, parts, parts, parts, parts,
parts, parts, parts, parts, parts, parts,
service, service, service, service,
parts, parts, parts, parts, parts, parts,
parts, parts, parts, parts, parts, parts,
parts, parts, parts, parts, parts, parts,
service, service, service, service .....

Nuff' said! Booth #8! Be there!
=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

ACE'95 Visitors and Exhibitors will be treated to all that
Toronto has to offer (it's a *LOT*!). Everyone will be treated to
an Exhibition taking place in a terrific, bright, modern,
intimate venue. The North York Civic Center is a great complex:
Shopping, Restaurants, Subway, Theatres, Hotel and - of course -
MEMORIAL HALL & ACE'95!!

*******
FEATURE EXHIBITOR > Wizztronics of Port Jefferson, New York
*******
OK ... so like, what is it that travels, like,
a billion miles per hour, executes computing
tasks like nothing you've ever seen before,
turns MIDI people into quivering bowls of
jelly, makes DTP people drool, mounts any
size hard drive currently available(!),
mounts a CD-ROM drive, high density floppy
drive, too many external ports to mention, and
looks so good you could just ... well ... scream?
The answer? THE FALCON RACK! Steve Cohen
will also have BARRACUDA on hand, AS WELL AS
COUPLE OF DOZEN OTHER INCREDIBLE PRODUCTS!
```

(Stacks of Racks and the rest of the Wizztronics
lineup!) He'll be in Booth #7. We also suspect
he'll be *busy* in Booth #7!
=-=

The *GREATEST*ATARI*EXHIBITION*IN*YEARS* is happening on April
1st & 2nd, 1995, in TORONTO!! The ACE '95 Exhibitors List is
impressive ... and there are STILL a couple MORE to come!!

LLLL Gribnif Software (NEODESK 4, Geneva!)
LLLLL TOAD Computers (just your basic SUPERSTORE!)
LLLLLL Branch Always Software (GEMulator!)
LLLLLLL Cybercube Research (Cyrel!)
LLLLLLLL DMC Publishing (Calamus, Outline Art 3!)
LLLLLLLLL Scarborough Computers (*THE* Toronto Atari Dealer!)
LLLLLLLLLL Missionware Software (Flash II!
LLLLLLLLLLL ICD INC/4Play/Black Cat Designs!
LLLLLLLLLLLL It's All Relative!
LLLLLLLLLLLLL ABC Solutions!
LLLLLLLLLLLLLL Esquimalt Digital Logic (OMEN!)
LLLLLLLLLLLLLLL GEnie Information Services!
LLLLLLLLLLLLLLLL Suzy B's Software (& CDs!)
LLLLLLLLLLLLLLLLL chro_Magic (RAM Gizmo, Pianistics, Crawly Crypt!)
LLLLLLLLLLLLLLLLLL Clear Thinking (EditPlus!)
LLLLLLLLLLLLLLLLLLL Schauzmoll Software (The first GUI BBS)!
LLLLLLLLLLLLLLLLLLLL Anodyne Software (ExtenDOS)!
LLLLLLLLLLLLLLLLLLLLL Oregon Research Associates!
LLLLLLLLLLLLLLLLLLLLLL Computer Direct! (DirecTT030 & an
LLLLLLLLLLLLLLLLLLLLLLL enormous lineup of Atari products!)
LLLLLLLLLLLLLLLLLLLLLLL Binary Sounds (SMPTE, Edit Track!)
LLLLLLLLLLLLLLLLLLLLLL Fine Tooned Engineering (MIO2, Sweet 16)
LLLLLLLLLLLLLLLLLLLL Compuworld (Service, Parts, Upgrades!)
LLLLLLLLLLLLLLLLLLL Encore Music (Falcon MIDI systems!)
LLLLLLLLLLLLLLLLLL Wizztronics (The Falcon Rack, Barracuda!)
LLLLLLLLLLLLLLLLL Steinberg/Jones (everybody knows what they do!)
LLLLLLLLLLLLLLLL SKWare One Software (Seurat!)
LLLLLLLLLLLLLLL BEST Electronics (every Part imaginable!)
LLLLLLLLLLLLLL COMPO (That's Write 3, SpeedoGDOS 5!)

****
FEATURE EXHIBITOR > ABC Solutions of Toronto, Ontario
****
How'd you like to use the GROLIER'S CD-ROM
ENCYCLOPEDIA on your Atari .... hmmm? SARA-CD
for Grolier's will be debuting at ACE'95!
IT'S TRULY AMAZING! It will be up and running
in the ABC Solutions Booth (#5), and in the
It's All Relative Booth (#30)!! Replace three
shelves worth of Americana, Brittanica or
Funk & Wagnall's, with one little CD!! This
is truly marvellous stuff ... SARA for

Grolier's allows you to poke around inside an
incredibly useful CD: Search for information,
cross-reference maps and pictures, browse
definitions and research information, play
related sounds, and make wonderful use of
Multimedia on your Atari computer!! Howard &
Lianne will also have the complete ABC
lineup on-hand: Edith Professional, 1st Word
Plus, tbxCAD and MUCH more!!

=-=-=-=-=-=-
The ACE'95 SEMINAR/LECTURE SCHEDULE WILL BE POSTED SOON!!

****
Check our WORLD WIDE WEB pages: http://www.io.org/~schrist/taf.html
******* or http://www.io.org/~schrist/ace.html

(previous News Releases contained an incorrect address ... sorry!)

MIDI, DTP, Wordprocessing, Graphics, Power Computing, Software
Libraries, Utilities, Accessories, Databases, Spreadsheets,
Custom Solutions, Games, Educational, Internet, BBS, Networks,
Accelerators, Emulators, 6502 support, 68000 support, 68030
support, 68040 support, JAGUAR Station, User Group Center,
INCREDIBLE SALE PRICES, Software, Hardware, Advice, Service
and EVERYTHING you need to get the VERY BEST out of your Atari!

==========
GETTING TO ACE'95 IS *EASY*. Toronto is directly
accessed by Highway 401 or the Queen Elizabeth Way,
or Highway 400/69. Crossing the US/Canada border
at Detroit, Buffalo, Niagara Falls, Ft. Erie,
Ogdensburg, Kingston, etc., will lead you directly
to Highway 401 or the Queen Elizabeth Way. Take the
Yonge St. Ramp north off the 401 and drive to 5110
Yonge St. (5 lights) If you take the Queen Elizabeth
Way, follow the signs to get to highway 401. *ANY*
AAA or CAA or other Motor League can provide you with
a map of Toronto, Ontario & Canada. Please call us
if you have any trouble! Pearson International
Airport is only 15 minutes away! Toronto Transit
subway access is direct, too - there's a subway
stop at the Civic Center!
==========
BOOK YOUR HOTEL & YOUR TICKETS IN ADVANCE! Call
or e-mail for info ... for INDIVIDUALS, USER GROUPS,
ORGANIZATIONS, DEVELOPERS & DEALERS! The Show Site
(North York Civic Center, Memorial Hall Exhibition
Facility) has hotel, shoppping, restaurants and more!
NOVOTEL HOTEL: $89 Cdn PER NIGHT
(single OR double occupancy)

** Call Novotel direct* @ 416-733-2929 and ASK FOR
A ROOM WITH THE TORONTO ATARI FEDERATION GROUP! **
ACE'95 TICKETS: $6 PER DAY
$10 WEEKEND PASS
*You can also call 416-752-2744 FOR HOTEL or TICKET RESERVATIONS
==========
Meet Dan Wilga, Darek Mihocka, Bob Luneski, Peter
Zalesak, John Trautschold, Craig Harvey, Nathan
Potechin, Mario Georgiou, Greg Kopchak, Al Fasoldt,
Rick Ladage, Jim Fouch, David & Jennifer Troy,

4248. Falcon Enhancement

Newsgroup: comp.sys.atari.st
Date: 1995-03-11 10:20:24 UTC
From: jperez@uhunix3.uhcc.Hawaii.Edu
Message-ID: <D59u20.MJo@news.hawaii.edu>
Source record: 169537

Does anyone out there have any information or specifications for the
various Falcon accelerators and Emulators? I have heard of the following:

Eagle Sonic/Mighty Sonic 32mhz 030
Barracuda 20-33mhz 040
Power Up 2 32mhz clock doubler
Falcon speed AT emulator

I would like to know what kind of performance increase can be
expected from these (and other? accelerator boards). I am also
interested in hearing about PC emulation (Falcon Speed).
Did the Falcon 486 emulator ever get released?

News, advice, opinions? I just hate having an empty slot...

Thanks,
The Borg
jperez@uhunix.uhcc.hawaii.edu

4249. Re: Modem??? <I want to hook up>

Newsgroup: comp.sys.atari.st

Message-ID: <3jru1p$9vc$1@mhadg.production.compuserve.com>
Source record: 169538

The Atari ST can use any standard *external* modem.. it doesn't have to be one specifically for Atari.

The ST uses a standard IBM style modem cable (25 Pin DB25 male to female), so that should be easy to find too.

As for software, there are a small number of commercial terminal programs still available.. Flash II from MissionWare Software is a good one.

For ShareWare programs, try ConNect or STorm, both available from CompuServe or any of the Atari ftp archives on the net, or most likely any local BBS that has Atari files available.

You can download these Atari programs into an IBM PC compatible computer and transfer them to an Atari ST by using a floppy disk formatted *on the PC* and as a *720K* disk.

BobR

>World and the support from around here it certainly will beat STF, and I for
>one

Yes we do need a desent Mag more in the line of ST-World, most people here
are just fed up with the format of ST-Review..

To much Falcon stuff, Falcons are not sold in this part of the world,
and the ones that I have seen are some 3-4 more than a good PC clone...

So BRING BACK THE ST-WORLD MAG FORMAT......!!!!

Fed up ST-Review Reader.......

4251. Falcon 030 FOR SALE

Newsgroup: comp.sys.atari.st
Date: 1995-03-11 10:36:31 UTC
From: fnjah@aurora.alaska.edu
Message-ID: <1995Mar11.013631.1@aurora.alaska.edu>
Source record: 169540

I have finally decided to sell one of my Falcon 030 computers. I have two.
4 Megs ram
80 meg internal ide hard drive
adaptor for svga monitor
adaptor for ST monitors
SCSI II cable to connect directly to an external scsi drive.

Lots of pd/shareware software on HD as well as AtariWorks and all that stuff.
Also includes Dr T's KCS Omega sequencer and
Xor Patch Editor, True Paint drawing program, and other misc games and stuff.

I also have a relisys monitor, but no original box for it.

Not sure what the going price for a Falcon is. E-mail me if you are interested.

FNJAH@AURORA.ALASKA.EDU

76702.1466@CompuServe.COM "BobR" writes:

: >James made as many, if not more, cogent points than you did...
:
: Sorry, I wasn't keeping score of "points"... and that was part of the
: problem.. every time I'd try to make a "point", there'd be a shotgun of
: unrelated agruments.
:

You missed the point of what I was Saying. I wasn't -counting- points, merely noting that you didn't appear to have made your case as well as he did.
:
:
: Since you weren't contributing to the discussion anyway
: that will hardly matter, will it..?
:
A mite difficult to contribute to a discussion when I know nothing about one of the subjects. I have never used PCs; I've only ever had Atari hardware, so I couldn't make a valid contribution. I was reading the discussion in order to help me determine my next upgrade; do I buy a 486 or Pentium PC a big Mac (ouch) a Falcon, or stick with my ST and improve the OS,the keyboard etc, fit a floptical or CD-ROM etc.

I think the anti-PC brigade have made a better case than you as a pro-PC protagonist. Therfore from my point of view, you lost

bazza

Atari have said that they will NOT be selling any more TOS upgrades!!
I presume this only applies to TOS 5. However they did say that
C-Lab can take over this market if they wish.

Hopfully c-lab will issue TOS 5!!

>
>How much experience do you need to go up levels

I'm not too terribly sure about this, but I believe you gain one level for every 100xp. (You can check with the stats screen to be sure, that'll tell you what level you are). At any rate, levels are insignificant in Ultima II. They don't let you use weapons/armor and they don't increase your stats.

>How do you raise your stats?

You have to go the Hotel California and bribe the "merchant" near the front desk. The amount you give is equal to the stats you increase, although don't be too greedy, because 1) it doesn't always work and you wind up losing lots of money 2) if you go over 99, you wrap back down to 0. The Hotel is in San Antonio in 1990 A.D. You can get there either by the legends portal, or a couple others. San Antonio's nice, too, because if you have keys, a skeleton key, a brass button (and a coin is nice, too), you can steal a plane.

Good choice for a name. Anyway, it is true that, at least for
the moment, Atari is focusing on the game system, presumably to
generate some loot. However, it has been said that there were
thoughts of making a Jaguar-based computer, and although that would
be a very long time away, it says that Atari is completely ignoring
the computer. Who knows? Perhaps Atari will re-surface with a new,
wicked computer! I, of course, intend to be here, just in case.

Personally, it gives me something to do to translate these programs and dox, and makes me feel good about contributing to the atari world in general. (Besides my programming, that is.) I would even like to get more people into translating, if they would be interested, as then there would be fewer programs that could not be used by everyone. Incidentally, I'm not just talking about translating to english. I cannot exactly translate documentation to other languages with any degree of accuracy, which is why I would like for other people to get in on it. There is, however, one problem. I don't know how the authors feel about me translating their programs. I would, however, welcome any authors to speak up and yell. Perhaps they could include a statement about not wanting their programs translated. I'm not saying that the onus would be on them to say no, although that would be nice to know if they support such an endeavor, as it does take a long time to translate software. Anyway, who better to translate a program? An author who learned business english/french/polish/etc. in school, or an actual english/french/polish/etc. speaking person who is willing to take the time to translate the program with a little work and a dictionary (or whatever gives you the edge).

I have no intention of translating any software I write to another language (except, perhaps, french canadian! Bonjour francophones! <grin>), but would be very happy to include translated .RSCs, programs, or text. (Heck! Everything I write is given out as freeware, including the source, just as long as my name remains in there somewhere!)

4269. XFSs and other Mint questions

Newsgroup: comp.sys.atari.st
Date: 1995-03-11 15:44:21 UTC
From: STIRRE31@MAINE.MAINE.EDU
Message-ID: <95070.104421STIRRE31@MAINE.MAINE.EDU>
Source record: 169562

Well, in a futile attempt to learn all about Mint I have downloaded
quite a bit of software and crashed my Falcon quite a bit :-).
First of all, how does one use an XFS? I have set up a partition
for Minix, have gotten the Minix file selector, but I do not know
what to do with minix.xfs. Can someone clue me in?
Also, most programs that I have tried to run (atarimgr and mintbash)
have crashed. They do not run in a window as I might expect but
print garbage on my menu line and quit. Does anyone know why?
BTW, I am using MultiTOS/Mint 1.12. Thanks for any help. I want
to learn more about this system.

4272. Atari Community E-mail List

Newsgroup: comp.sys.atari.st
Date: 1995-03-11 18:17:36 UTC
From: sirsmedley@delphi.com
Message-ID: <5KxY2YI.sirsmedley@delphi.com>
Source record: 169572

The Atari Community E-mail Address Book
Revised 11-Mar-95

Hello all! This list has been compiled to provide Atarians worldwide with the addresses to contact other members of our ever-changing Atari community. The first half of this list is user groups. For those groups with multiple e-mail addresses, the first is usually the primary contact. The second half of this list is significant members of the Atari community.

Using this list -
I created this list to encourage communication between Atarians everywhere. If you have a question without an answer, or are moving soon and need to find a new user group, this list should help. It is also a great way to distribute Atari related press releases, such as upcoming Atari shows and new product announcements. And I would LOVE to see user groups sharing newsletter articles via these addresses! However, it SHOULD NOT be used as an advertising tool. If you are a retailer looking to advertise, please contact the individuals on the list and ask if they want to receive your mailings. Some people must pay for their e-mail by the character and would not want unsolicited commercial mailings.

If you have any changes, additions, or suggestions, please contact me via private e-mail. My addresses are listed under AUNT.

Dan Mazurowski, AKA Sir Smedley
Semi-official e-mail contact for AUNT

PS - This list may be printed and distributed at will, though I would like credit for compiling it. Please be sure to contact me for the latest update, as I won't post every minor change.

PPS - Any Atari gurus want to volunteer their addresses for the list? Not everybody has access to Usenet, ya know!

: MiNT, GCC 2.6.1, Chimera...
I would also like articles like that...I never had the pleasure of
reading ST World or ST Log, and I find ST Format somewhat below my my
needs. I want technical articles, not pap ;-).

Anyway, how soon is Atari World to come out, and what is/will be the
ISSN, so I can order it easily from my friendly neightbourhood bookstore?

THeo

>(commercial) or *GEM-View* (shareware). Both these programs (and
>there are others too) print your piccies, and in colour too!

I've got GEM-View- I wasn't sure if the driver that was included would run
a 550C (that's a typo in the subject header- should be 550*C*) or not.

Someone else recommended Imagecopy- is there a demo out there I can look at?
Also, would anyone know of a dealer that sells Imagecopy that I can get prices
from?

Thanks!

David (lamarth@delphi.com)

I have a Atari power supply I would like to trade or sell.

It is input 117C 60HZ 25VA
ouput 5VDC 0.72A
(oop output) 12 VDC 0.21A

I believe this is the one for the floppy disk drive.
I do know that it works fine.

I will sell or trade for Atari 8-bit or video game items

I recently got this information from Joe Connor, and thought it might be a
good idea to let you all have a look.

Take it away, Joe:

```
==========================================================================
Atari World a NEW Atari magazine is born!!!
==========================================================================
```

Recently Atari ST Review was bought and closed by ST Format to silence the
best Atari magazine ever! The editorial team and the bulk of the
advertisers believe this wasn't in the best interests of either the
readers or the Atari marketplace.

Many Atari enthusiasts saw this as the final straw and the drift to other
platforms perceptibly increased. With the support of a new publisher and
advertisers we decided the Atari marketplace deserved better and after
months of hard work we're proud to announce Atari World.

Atari World will feature separate Pro and Beginner supplements designed to
attract ALL Atari enthusiasts. Drawing on the experience of the best
freelance team in the business we're confident you're going to like it!

We decided against a cover disk BUT to make it easy for readers to get
their hands on the best Atari software around an optional 'Reader disk'
for each issue will be available via our telephone hotline.

It's tough out here in Atari land, so instead of wishing us luck buy the
first copy, it's great to be back!...

The Atari World team.

```

>
>To much Falcon stuff, Falcons are not sold in this part of the world,
>and the ones that I have seen are some 3-4 more than a good PC clone...
>
>So BRING BACK THE ST-WORLD MAG FORMAT......!!!!

Since the editor is ex-ST-Review as are most of the writers, I don't
think you'll get your wish...

Most of the ST-World articles were about programs and systems I just could not afford (I then had a 2Mb STE). There were reviews of £400 hard-discs, £400 DTP programs, word processors that needed a Mono monitor just to run, etc, etc.

It didn't make the mag any less fun to read mind you.

At least with ST-Review there were enough programming articles that
could be of use to anyone (with cover discs, etc).

What the hell? Why is it that everything available is somehow a clone of something on the PC? The Mac is NOT an MS-Windows clone, Unix is NOT a DOS clone, ST Mono is NOT a form of VGA, and Minix is NOT a Linux clone!! Minix was out years and years LONG before Linux. Minix is a Unix-like operating system available for just about every computer. The author published 99% of the source code in a book on operating systems! Linux is another Unix-like operating system, but Minix is NOT a Linux clone!! Not even close!

Before going long distance, I bet there are homes right in your
school district that have great ST software just sitting around. Do you
have a district mailing which goes to parents? Can you put a notice in
it? You might also put a small classified in your local paper under the
computers section. I bet people would have stuff for you.
I'm a teacher too and know parents want to help.

Er? I hope it is a typo, only. No Faxclass 3 whatsoever. 1, 2, and 2.0 are
used within (Fax)modems.

>With the permission of TKR, the copyright owner, I am able to make this
>publicly available. As it stands, I have their permission to download it

There should be no problem re. the (c), as the *drivers* of the TeleOffice
package are available on BBS'ses here, too.

>there ... any ideas???

I would guess that you are running out of memory, specifically there is probably not enough memory for compress or gzip to unpack the news packets. If your provider/host site is sending packets compressed with gzip or compress with 16-bit compresssion, see if you can persuade them to send you 12-bit compression instead. There with 12-bit compression compress needs less than 64k of buffer space, with 16-bit it probably needs over 400k.

I perfectly agree with this opinion. English speaking people seem to believe that there is a sort of natural law which says that other people also have to use the English language. Things are not that simple. I wonder what would happen if all other people would refuse to accept English as the standard language for international communication and agree upon the use of an artificial language or a dead language, for example, Latin, for this purpose. I would happily learn this language. (By the way, it is a pity that I do have to write this in English...)

Please do not misunderstand me: I do not have anything against English speaking people. I just don't see why they should have the advantage to do international communication in their mother language.

Andreas

Message-ID: <e67_9503180747@centron.com>
Source record: 169457

Hello Mr. All :-)

Dear somebody i realy need help !!!

I have a hardware problem that goes like this :

I have an AT-Once Plus PC emulator card for about 2-3 years and
everything
was just fine until i decided to by a TOS 2.06 card with a hardware
switcher and the most important an AT-Bus socket that exepts common
PC's AT-Bus hard disk drive, so i went out and bought a 260MB 3.1/2 inc.
hard disk, and here is were the problem arise... the hard disk works just

fine and so does the AT-Once but the AT-Once does not recognaise the
hard disk.

Some tech stuff... the TOS card as well as AT-Once fits on the CPU
this is acomplished as the TOS card has a thru socket made just for
such cases as AT-Once and other emulators and accelerators.

I think that the hard disk works in a similar way (if not exactly the
same)
as on the MEGA STE, i have a STFM (1MB).

Is there something that can be done ?

(P.S. this is a mail from Greece :-) only English answers please)

Friendly Nenos.

All you people on here who own and use ABC Solution's SARA CD-ROM driver programs for accessing PC-based CD-ROMs will be pleased to know that another CD has been found that will work!

A member of TAF recently saw a title by CMC on sale called TOTAL BASEBALL. Remembering that CMC makes the SHAKESPEARE, SHERLOCK HOLMES ON DISC! and THE FAMILY DOCTOR CDs that can be accessed by the SARA_DP.PRG in the SARA suite of drivers, he decided to take a chance on it and buy it.

Lo and behold, it WORKS!

TOTAL BASEBALL is a CD dedicated to the history of the sport, containing many photographs and illustrations as well as text about the history of the game. It also contains writeups of the many World Series playoffs - relive the Toronto Blue Jays' WS wins in '93 and '94.

Just thought I'd let you guys know about THIS!

... ... I am Pentium of Borg. You will be approximated.

By using CERN's WWW library, all _I_ need to do is come up with a stylesheet and implement a formatted text window; I get proper image support (OK, so I have to build IJG's JPEG library and some NetPBM tools) and URL parsing for "free".

HTML also allows sloppy documents; by using an existing library that handles them, I don't have to worry about anything nasty. Even a simple state changer would be more code than I currently need to write (I've done enough porting that it's a no-brainer).

Hi Folks,

Does anyone out there in cyberspace know the email address of Martin Griffiths,
aka "Griff"?

He's the author of Pro Tracker Replay, and is currently working on a new
wonderful utility for the Falcon.

Please, someone - help!

Yours sincerely

AFAIK, only Lynx, a text-mode WWW browser. I've also ported www (CERN's text-mode browser), but I haven't uploaded it anywhere... lynx seems to be more capable (or nicer at any rate), and I built it mostly to test my port of CERN's WWW library.

There is at least one GEM WWW browser in development now, and I'll probably have a GEM HTML viewer running at some point; dunno if I'll extend it into a full WWW browser though (depends on time; it won't be much work).

Yah, sure. IBM can't even get their PowerPC "personal" systems out
there... they're too busy arguing with Apple over the "common" platform.
You think they'll release/announce somebody else's computer? Especially
a dead platform like ours?

>I just had a thought...why do people want to run Mint on a Falcon or TT
>when Linux and other Unix clones can run on it....

1) MiNT's been around a whole lot longer; Linux just became usable.

2) MiNT doesn't require an FPU; Falcons without one are pretty common.

3) MiNT _adds_ functionality to TOS/GEM; Linux _replaces_ it. If you
"need" to run a TOS or GEM application, chances are MiNT will work
with it.

4) MiNT is easier to set up.

5) MiNT runs on my ST (ok, that wasn't part of your question; but what
if you had an ST and a TT, and wanted sort-of the same setup on each
one?).

D.L.Hastings wrote:

> > I just had a thought...why do people want to run Mint on a Falcon or TT
> > when Linux and other Unix clones can run on it....

> 1) Linux requires an FPU
Thats true. And maybe this won't change.
> 2) Linux doesn't work on falcons with mixed IDE and SCSI drives
Not yet. There is a little problem with the shared Interrupt. We could make it
like TOS, but this would give away the advantage of background i/o and
multithreaded filesystems.
> 3) Linux doesn't run TOS or GEM programs
Not yet. But we are planning an emulator.
> 4) Linux uses about 4 times the disk space
A compareable setup with MiNT requires more memory than Linux since there
are no shared Libraries under MiNT.
Just one example:
Linux (X11R6):
-rwxr-xr-x 1 root wheel 107524 Dec 5 10:03 twm
-rwxr-xr-x 1 root wheel 13316 Dec 5 10:04 xclock
-rwsr-xr-x 1 root wheel 107524 Dec 5 10:08 xterm
-r-xr-xr-x 1 root wheel 431108 Dec 5 09:27 libX11.so.6.0
-r-xr-xr-x 1 root wheel 177156 Dec 5 09:46 libXaw.so.6.0
-r-xr-xr-x 1 root wheel 279556 Dec 5 09:38 libXt.so.6.0

1116184

MiNT (X11R5):
-rwxr-xr-x 1 root wheel 309255 Nov 22 21:12 twm
-rwxr-xr-x 1 root wheel 418027 Nov 22 21:12 xclock
-rwxr-xr-x 1 root wheel 547857 Nov 22 21:12 xterm

1275139

Already for this few programs Linux take less disk space than MiNT.
(xclock isn't an error. The MiNT binary is really over 30 times as big as the
Linux binary)

> 5) MiNT is source level compatible with UNIX anyway.

But not very well: Only 32 file descriptors (Linux: 256), blocking fork,
fixed stack, no swapping, shared Libraries or demand loading (isn't an
incompatibility, but a serious limitation)

So should PC mags use 8086 mahines to review software on? They are sold
in the US and Europe. The magazine is intended for sale in the UK, most
of the people who write for it will be Falcon owners so they can't really
do much other than do the screen shots on a Falcon.

They are .bmp format - but not the usual .bmp format. There are two
identically named files for every file in the same directory.

>I'm not sure if the latest GEMview program can handle BMPs or not.
>
>As for having duplicate named files, were there any differences in the sizes
>of the files..?
Yep, one small ~8K (probably a color map or a text description) and a
130K file. Or maybe one is a thumbnail sketch of the larger - but
both have identical names in same subdirectory.

>Some discs offer two (or more) resolutions of the same picture.. the higher
>resolution files would be a lot bigger.
>
>Even a PC wouldn't be able to handle files with exactly the same name, in
But they must have some way of doing it or these cdroms would be useless
to everyone.

In Germany 6.5.5 is the latest version of the pro-level utilities.

AFAIK, there is a 6.6.x in the making, to support machines with two IDE-drives connected.

But I am not aware of this version being shipped, yet. Not here anyway.

Source record: 169464

Atari uploaded revisions of their LOGO language to GEnie, and I'd imagine to other online services (I'll have to check to see if we have it on CompuServe.. I don't remember seeing it, probably because no one has accessed it in years).

It's also possible that the files might be found on atari ftp archives.

While Atari seldom, if ever, actually released anything into the public domain, they did have a policy of freely distributing many of their files.

I don't believe they ever repackaged LOGO to sell separately, so this one may just possibly be freely distributable too.

I'll try to remember to ask Atari's Don Thomas about it.

ORCS is Otto's Resource Construction Set, for editing RSC files, the files
that specify all the GEM stuff in GEM programs.

RCS is Revision Control System, for managing source code versions/revisions,
at least I guess that's what Geir was after.

: think you'll get your wish...

ST Review may have been a bit 'Falconised' but if you think about it
its almost excactly the same as PC Mags. The last time I looked at
the the 486 was king, and this was still when most home users still had
a 386 or below.

At the end of the day, the Atari computer platform can only survive if
people upgrade their machines either to a Falcon, Medusa etc or
modify their ST to make it super fast. You simply cannot expect programmers
to squeeze huge amounts out of the same old hardware indefinately.

However I do agree, perhaps a bit less Falcon stuff would be better, and
bear in mind I am a Falcon owener!

Lots of reasons.

I run MiNT because its been around a lot longer than Linux on the Atari -
and is well developed. Its also compatible with my old STM. I fully intend
to install Linux some time - but I'm in no hurry.

:-)

Roland.

: stock them anymore. Can the be found for under fifty quid ? Has anyone had a
: bad experience with a second-hand machine ?
: Have fun,
: Giles.
Toad computers till has the portfolio in their catalogs but you'd have to
give them a ring to find out if they still have them and at what price.
Toad Computers (US) 1-800-448-8623

Portfolios are reasonably delicate in that the screen mylar is
prone to failure after a few years of use. Replacement mylar ribbons for
the port are available at Best electronics (always good to have a spare)
but it is probably in anyone's best interest to find a new portfolio if
possible.

Source record: 169474

I use Atari Works on a 4 Meg Falcon printing to an Epson dot matrix at 360 DPI and don't have problems printing. I sometimes get minor screen corruption when I'm blocking text (it leaves black lines on the screen) but thats more to do with NVDI and the TrueType fonts than Works as it never did it with Speedo GDOS.

Matti, the ST uses the standard VT52 codes to control the screen... this is
a list of the most common ones I could find...

ESC A Cursor Up
ESC B Cursor Down
ESC C Cursor Forward
ESC D Cursor Backward
ESC E Clear Screen, Home Cursor
ESC H Home Cursor
ESC I Return to same position on previous line
ESC J Erase to end of page
ESC K Clear to end of line
ESC L Insert line
ESC M Delete line
ESC Y row col Position cursor at row,column

ESC bc Set foreground color to c
ESC cc Set background color to c
ESC d Erase to beginning of display
ESC e Make cursor visible
ESC f Make cursor invisible
ESC j Save cursor position
ESC k Restore cursor position
ESC l Erase line
ESC o Erase from beginning of line to cursor
ESC p Enter reverse video mode
ESC q Exit reverse video mode
ESC v Wrap text at end of line
ESC w Discard text at end of line (don't wrap)

Hopefully that will get you started...

BobR

As somebody mentioned there is this bidirectional protocol named Hydra existing for Atari. I have seen the same mentioned in the document of Amiga's version too. So, the only problem is where to find it. I have looked for it from several ftp places and couldn't find anything. If somebody owns it could (s)he please upload it to some place? That only if it is not commercial stuff of course. Thanks!

4336. Xv 3.10/Xdvi/Gnuplot (for X)/Chimera fix

Newsgroup: comp.sys.atari.st
Date: 1995-03-13 02:20:29 UTC
From: sasmesba@kingcong.uwaterloo.ca
Message-ID: <D5Cx65.9Is@watserv3.uwaterloo.ca>
Source record: 169484
Cross-posted to: comp.sys.atari.st,comp.sys.atari.programmer

Hello all,

I have managed to compile the following for MintX with 68030/FPU options:

1. Xv 3.10 (the latest version). This is the latest gif/jpeg/tiff/etc
viewer for Xwindows - it even has cut and paste! I compiled for
68030+FPU, if there is enough interest I can try compiling
ST (68000) and Falcon (68030 nofpu) versions and upload to an ftp
site. Picture manipulation with an FPU is incredibly fast!

2. Gnuplot 3.5 - Also for 68030/FPU - plots into a window - also very
fast with FPU. I still have a file loading bug to fix on this.
Allows output in many different latex formats.

3. Xdvi - this is great - it works with any currently existing CS-TeX setup
so that you can use the files currently on your TOS partitions without
copying anything to a Minix partition. The way it looks for fonts is SO
flexible with an environment variable that any existing Tex setup for
Atari should work with this as is. I can use use CS-TeX under GEM
or X windows just as easily.

4. Chimera fix - (1.36) The mintLIbs pl44 has a function to generate a
unique name for a temporary file, unfortunately is uses backslashes
for the filename. If the shell used to execute a command with this
filename neeeds forward slashes or two backslashes for filenames (such
as tcsh or the sh from MintOS 1.4.1) then you're won't be able to use
an external viiewer. I patched it to used forward slashes always so
if anyone (besides me) really needs this, let me know. There is a
problem, though. When the viewer is called, the system() function is
used and Chimera waits until the external viewer is exited before
taking control again. You cannot run the external viewer in the
background because the temporary file is deleted by CHimera as soon
as it regains control. Anyway, when it gets back control it reports
'pexec - wait error' It doesn't cause any harm but it annoying. AS
well, a second copy of the chimera process runs while the external viewer
is running - this takes a lot of memory - does anyone know of a better
more mint specific call to fix this (as opposed to the standrd system())
call?

5. I am currently working on Ghostview 1.5/Ghostscript and then maybe I'll
take a crack at Motif and Xmosaic.

If there is enough interest for nonFPU/non68030 versions I will compile
them as well. Most of these programs do require a fair bit of memory.
(I think you can still run any on a 4 meg machine though)

>hard drives were suitable, if any driver software was required, etc. as I
>am considering installing a larger capacity drive in mine.

Well I haven't done any "Swapping" exactly but I did add a used 80 MG
drive to my Falcon. I bought it with no HD so I thought I cound get one
cheaper.
Well I got the drive for $80 and I called Toad computers to see about
mounting hardware.. During this call I found out that the internal HD is
a 2.5" device (usually used in laptops) and the one I bought was a 3.5"!!!
Well after a lot of searching I found a converter cable that would
allow me to hook it up (the 2.5" has 44pins, and the 3.5" has 40, the extra
pins are for power) it was only $10. I hooked the drive into an external
case, carved a hole in the back of the Falcon for the cable, hooked
the drive to the external powersupply and formatted it and it worked!!
No special drivers needed. Just plug and plaly
Now I just gotta geta get a tower case to neaten it all up ..
To my experience ANY IDE device will work but the 2.5" are
hard to find and expensive!

Roger Sheppard.. (sheppard_r@kosmos.wcc.govt.nz) wrote:

: No Have some Brains and THINK...

Have you ever considered taking your own advice?

: There is no hope in the world, even NeXt dropt out of none
: standard computers and from what I have read here about German products
: they are way over priced....

NeXT died because, unlike Atari, the NeXT did not have a long history of computers behind it. Sure, Steve Jobbs made the computer after he left (or rather, was tossed out of) Apple. But the computer was compatible with nothing, and there wasn't a great deal of software for it. It was a nice machine, but there was no marketing apart from word of mouth and the occasional mag advert. Additionally, NeXT was far, far too expensive, even over and above the highest priced Mac or PC of the time. ($8,000 Canadian minimum) Even NeXTStep was a flop.

: Also Atari is no longer into Computers....

Atari no longer makes ST, STE or TT models. They still manufacture Falcons.

: So wake up People the Atari is DEAD.....

Quick! Someone tell the Atari developers! They havn't caught on to Roger's obviously superior inside information yet! Wait a minute, I'm one...

: Take the Pill and move to a real Computer, or how to live with the Bomb...

Define "Real." Do you mean a computer with an ancient architecture that keeps trying to patch holes in their OS and cover it with pretty blankets to make you _think_ it's getting better, but in reality is only getting prettier and slower? Myu idea of an OS is _not_ one that takes two minutes to boot up. I timed my friend's 486 DX2-66 booting up OS/2 ... from start to finish, two minutes, ten seconds. This is progress? What happened to "Faster?"

It is a GNU-Zip file. Note that GNU-Zip is _not_ compatible with regular zip. You can get a port of GNU-Zip for the Atari ST, or alternatively, if you're on a unix system, just type 'gunzip <filename>' at the unix prompt.

the 68000

O.K , but if you need a MC68000 for your atari, you have to try
distributers & stockists;watch the price jump up after a few years.

I have seen this happen to old Texas CPU's (TMS9909,anyone), used to cost
around £12, now selling (when you can get them) for £79.

In reality, the MC68000 should be alright for a long time.

While we are on the subject, why is there such a high price on Atari
custom chips (DMA,Shifter,Glue,etc)? Some of these are advertised in the
UK from £20 upwards. A fully populated Motherboard (STFM) can be got for
around £49.

Production ends when there are no more orders, & the last time buy will be a call for final orders. These will be shipped by a specified date. No further orders will be accepted.

Distributers of Motorola parts will carry stocks for a while, Motorola will not keep any, except for their own needs.

Should be lots available for a good few years, depending on the demand.

Does anybody want to swap my Data Pulse 170 MB external SCSI hard disk with
the Link adapter and ICD Pro. utilities for their external CD-Rom unit ??

On 11 Mar 1995, BobR wrote:

> One last time, James.. then I'm done wasting any time at all on you...

Thank you for making it the last post, Bob. Conversely, I find it has
been my time which was wasted. I only post through my irritation of your
incidious pro-PC postings which you bathe in such glory, here in
comp.sys.atari.

>
> >YOU HAVE ***NEVER*** (IN WEEKS) POSTED SOMETHING INFORMATIVE ABOUT ATARI
> >COMPUTERS...
>
> James, I hesitate to call you a liar in front of everyone.. but it's really
> a tossup... do I really want the flamewar, or do I call it like it is..?

That's OK, Bob....I don't hesitate to call you one. I really don't have
time for the flamewar either....but there comes a time when you, BOBR,
need to ask yourself... "Gee....aren't I the one promoting PCs in the
Atari forum?"

>
> Either you simply don't know how to READ (and no, folks, this isn't any kind
> of slam.. James has simply demonstrated that he ignores anything I've typed
> without reading it, for whatever reason), or you simply don't know how to
> comprehend what you read.

HA HA HA HA!!! Au contraire! I'd ignored your posts for months, and it
was only through my BEGINNING to read them that I felt inspired to post.
I got tired of you polluting this area with your Atari criticisms, and
pro-PC postings.

My reading comprehension is quite excellent, thank you very much.
However, when the arguements are specious (like yours) and the logic is
flawed (like yours), I sometimes have difficulty.

>
> DO YOU EVEN READ THE ANSWERS TO THE QUESTIONS _YOU YOURSELF_ HAVE POSTED..?

Funny....I remember a while back we argued about the price of a "no eject
button" floppy drive, and you never answered that question. That is
immaterial now, but the point that you never answered remains, especially
when you point an accusational finger at me in regards to questions.

>
> Folks, I really don't want to take the time to go back and quote all the
> messages just because of one twit (and yes James qualifies as a "twit"..

> not everyone , as he claims, does qualify. Most people here are worth having
> a discussion with because they can read, and can hold an intelligent
> conversation. James is something special.)

BOBR, you have demonstrated that you are **REALLY DUMB** for the
following reasons:

1) First and foremost, you Atari bash and litter the newsgroup with
"pro-PC" (IBM) postings. If you think your opinions in this regard
are going to fly in comp.sys.atari (and evidently you do), you are
so lacking of intellignece that I pity you'll never amount to anything.

2) You lack of maturity is clearly demonstrated in the above quoted
paragraph. After instigating a flamewar that was out of place to
begin with (should have been in comp.sys.ibm.pc), your arguements have
been full of holes, you've only replied selectively to those which were
easy (i.e. required NO thought of research), and completely ignored
those which may have presented you with a challenge. What's easier for
you is to resort to CHILDISH NAME CALLING, as you do again. Let that
part speak for itself, and for your immature character. DISPUTE THAT!

[big deletion where BOBR repeatedly questions my ability to read (yawn)]

>
> This is a real waste of time, folks... James doesn't seem to like being
> labelled as a "twit"... but one has to wonder why he tries so hard to fit
> the profile.

Yes, it has been a waste of time. However, I am tickled in reading your
reply and the general tone. You were obviously a little riled about it -
GOOD!!! You now understand how irritating your Pro-PC messages are to me
(perhaps others).

One has to wonder why I try so hard to fit the profile? No, back up a
couple of steps. One wonders (1) Why you cannot contain your emotions
and resort to name calling, (2) Why you cannot suppress your egocentrism
as you feel that somehow YOUR calling me a "twit" is of any significance
whatsoever. From my perspective, YOU are one, but I haven't stated it
thus far.

>
> James likes Atari computers... cool.. so do I.

Well GOOD!!! One has to wonder why you argue so vehemently for OTHER
platforms, and in THIS newsgroup.

>
> James apparently has a lot of trouble working with IBM compatible computers
> That's really too bad.. I don't.

I suppose in your little noggin, I'm the total dumbass who can't
understand a C: prompt, and you are "Super BobR" who codes x86 assembly
singlehandedly, like it's going out of style! HA HA HA!!!

No, I am an experienced PC user. I'm no expert, but I can probably navigate my way around a DOS machine quicker than you can. However, just because *I* can doesn't mean it's "easy" for everyone - like your little sister or your dad who never touched a computer. I believe it's more of your egocentrism....if it's "easy" for BOBR, it's truely "easy." Anyone who can't edit a CONFIG.SYS file (I certainly can) must be a dumbass according to you, BOBR. Likewise for PC memory juggling. I, on the other hand, am experienced with both and it presents no problem to me, yet I realize it's not a desirable arrangement. The fact that BOTH of those afflictions are saught to be eliminated (along with DOS) in the PC world qualifies my contentions in this regard. Yet YOU disagree, and instead argue that it's easy - as PCI busses (which eliminate tedious IRQ setting), Win95 (which eliminates all the CONFIG files, memory juggling) is promised to be in the wind..... looks like you're alone in your opinions, BOBR.

You erroneously assume that because I do not LIKE a DOS machines, that the only reason for that is because I don't understand them, or that I am inexperienced. Through your well-maintained egocentrism, this is the only way you can treat a viewpoint alternative to your own. You use and like MS-DOS computers, and you just can't understand how anyone in the world could not like them. You just can't figure that....so I must be a "twit" because of it....an egocentric limitation of YOUR understanding.....HA HA HA!!!

> James seems to have trouble equating that with anything other than "Atari
> Bashing".. that's pretty sad.

You've repeatedly spouted off that an MS-DOS machine is as easy to use as an Atari. As I have exposed WELL KNOWN FACTS in the shortcomings of the PC (1) CONFIG FILES, (2) IRQ CONFLICTS, (3) JUGGLING SEGMENTS OF MEMORY. These are known disadvantages to the system that are known UNIVERSALLY. Yet, there you are all by your lonesome, contending that these are not problems, while the entire PC industry works to "advance" and conquer these drawbacks...with WIN95 and PCI, for example. As I mentioned these 3 disadvantages YOU WOULDN'T EVEN ADMIT THAT THEY ARE DRAWBACKS, yet tried to fabricate equivalent drawbacks to the ST. I stick a blank floppy in the ST and turn it on and I'm at the desktop. HA HA HA!!!!

>
> James missed the point of most everything I tried to say in this exchange.
>
Nope....BOBR interprets everything from ONE egocentric point of view. No other viewpoints matter, and opposing viewpoints must come from "twits" in his opinion. Such name-calling is how he deals with the situation, in all his childishness.

>
> That certainly isn't going to stop me from helping Atari users every day,
> and stating my opinions.

I cheer you on in your "helping Atari users every day." I suppose you help them with your pro-PC postings (as another user mentioned, this

ISN'T THE FIRST TIME YOU'VE DONE IT), and try to make up Atari difficulties on the order of PC config files, IRQ conflicts, and memory juggling. I hope you have a different kind of "help" in mind for the future. I also hope that when you state those opinions, you realize that your own are no more significant than mine. (can that egocentrism, buddy)

>
> As I said before... goodbye, James.
>
> BobR

YES!!!! GOODBYE!!! Finally...less time wasted at the terminal!

Gopher and WWW have the same restrictions as at weekends....no non ac.uk logins from 8am-8pm. The rest of the time, there are no restrictions...GMT I should add.

Surely, Roger, you can easily get in at the appropriate times, seeing as you live on the other side of the world, 12 hours ahead of us. :-)

: I thought you had week-ends there..???

Yup, we sure do, and that is why no one is here in the office at weekends. We may log in from time to time, using our modems at home, but we all do have a life too. :-)

: Or did some one forget to program the computer...??

Aw, come on...

I am deseperatly looking for informations on the Ethernet RiebelCard.
This card was made in Germany (I think) and can be plugged into a MegaST
computer (a different version exists for the VME but I only have a MegaST)

What I am looking for : the names of the chips used (Ethernet controller,
Ram used, etc...), the different addresses of the card, the way the Ethernet
number is stored, is there a private memory (is so, how much) or is there a
DMA access made.

If anyone can help me, he will be welcomed.

Thank you.

It's best to re-format the drives with AHDI (latest) or ICD SCSI pro
utilities. You seem to have overlapping drivers (drivers need to be
uninstalled with the installer-program before putting in a new one).
What's the Adaptec 4070? Connecting SCSI drives to a Falcon does not
need anything but the SCSI-2 cable and a power supply (& case).

: Thanks a lot and BYE-BYE
: Jens Mayer

If someone could write a good TCP/IP interface for the ST, then I would be most happy to code a great Falcon WWW browser with GIFs and all. However, I do not have a clue as to network protocols and PPP or SLIP packet switching. So, until someone standardizes a TCP/IP (much like Mac has), there will be no WWW browser.

All that would be required in a desk accessory or at least a concurrently running process in MiNT or MagiC where other porcesses can communicate via pipes or GEM event messages. This would allow true multitasking and allow for others to develop software for Email and News and such without being "proprietary". If someone can make a REAL TCP/IP for the ST, then many beautiful programs would appear.

I am aching to make a www browser, but it would be a useless project without a way to communicate with the outside. I could make a www interpretor that only works locally (no network accesses) and will show files like the web, but what use is that without having to download every possible file first?

Good luck!

Rich

My brother was just given an Atari 520ST and he asked for my help to get it set up. Since I am a Mac type, I have no idea where to get any software for this machine.

To start with, we need system software to get the thing up and running. Any sources of info and software would be greatly appreciated.

It is a problem. What linux programs are there out there that use the
Falcon's sound system to the full? None, I'd say.

> > 5) MiNT is source level compatible with UNIX anyway.
> This is not true, think about the semantics of the unix fork() call.

I don't know the details, since I am not (yet) a UNIX programmer. But I
can ftp UNIX source, type make and get a working program. So as far as
I am concerned, there is source level compatibility.

Steve Jobbs WAS NeXT, and he certainly had a long history of computers
(he created Apple Corp in his garage remember).

>rather, was tossed out of) Apple. But the computer was compatible with
>nothing, and there wasn't a great deal of software for it.

Have you ever used a NextStation? They are wonderful. The quality of the
apps that came with them was high enough that many folks wouldn't want any
others for quite a while. Steve Jobbs & co did a wonderful job on the machine,
and to be honest, had they continued to make them I would have bought one
myself. I would consider getting a PC to run NextStep on if the cost of NextStep
wasn't so ridiculous (ie. almost the same as the hardware it runs on).

> It was a nice
>machine, but there was no marketing apart from word of mouth and the
>occasional mag advert. Additionally, NeXT was far, far too expensive, even

In the workstation market it was aiuming for, the Next machines were very
competitively priced - remember, they were competing against the likes
of Sun & HP, not your average PC clones.

Erm....my falcon takes quite a while to boot as well, ('coz of all the
patches I use to get a nice comfy system), and even longer if I'm
using MiNT-X.

4379. Atari St MIDI SysEx program

Newsgroup: comp.sys.atari.st
Date: 1995-03-13 16:31:42 UTC
From: ac381@detroit.freenet.org
Message-ID: <3k1s1e$fat@detroit.freenet.org>
Source record: 169423
Cross-posted to: comp.sys.atari.st,alt.music.midi,comp.music,rec.music.makers.synth

I am looking for a program to send and receive MIDI System Exclusive messages (SysEx) for my 1040 ST. I found one program in the umich archives, STMIDIEX.LZH, but I have been unable to get it perform correctly.

The program reports that it has received SysEx messages when none have been sent to it, or even when no MIDI cables are even connected to the ST!

I use my ST extensively for MIDI, and have detected no problems with other applications, so I don't believe this is a hardware problem.

I would like to know if anyone else has downloaded this program and was able to get it to work, or knows of any other programs, preferrably PD but I may be willing to purchase, that can perform this function?

BTW- the main device I am trying to dump info from is a Roland R-8. I don't know if that could be a factor.

Thanks in advance,
Mike

So you haven't compiled a program yet which fork()'s and then lets the
two processes do something together (for instance kermit does this).
This will not work because the parent is suspended till the child exits.
If you don't believe me, look at the MiNT sources...

I don't get it. What's wrong with the socket interface of MiNTNet, other
than the fact that it's only available under MiNT (try to write a
network daemon for plain TOS :-). It's a very widespread, well
documented, standard interface.

4384. HD+TopLink+M-ST1 Problem

Newsgroup: comp.sys.atari.st
Date: 1995-03-13 18:42:40 UTC
From: Antoine Martin <am14@doc.ic.ac.uk>
Message-ID: <3k23n0$dks@frigate.doc.ic.ac.uk>
Source record: 169397

I can't format my QUANTUM ELS127S from my Mega-ST1 using the TopLink
adaptor.
Here is what works:
_ The drive (I've been using it on PCs/MACs/FALCONs, it has been
formated/partitionned many times without any problem). It doesn't
have any bad sector.
_ The Mega-ST1 seems to work, at least with floppies.
Here is the problem:
I can't run programs from the hard-drive (formated with my falcon),
programs crash, files written are corrupted (they appear in the
directory but their contents is usually corrupted: cross linked files
wrong file size, the FAT is usually a mess after a few write attempts)
So i decided to reformat the Hard drive with HDX 5.xx (last version)
but it says "Cannot format... Check connections" (Of course
connections are OK, I have tried with and without terminator).
Then i took scsitool and tried to format it again: the format process
works but when it gets to the partitionning the program gives an
error (something like sector -1...).
Then i tried to read the previous partitions i had (i thought this
wouldn't work as the drive was supposed to be formatted) and it
worked... The files and directories were still there. Tough.
It looks like the drive refuses to format !
My question is: Where does this come from ?
Could it be the toplink adaptor ?
"It's only mistery and i like it...", I Don't.
I need to use this machine for my work !
Any help appreciated.

Antoine Martin

> In many cases the author is in one country, the user in
>another, and the currencies are not common. Registration is therefore
>resisted as the charges made by the moneychangers raise the *effective* fee
>beyond reasonable levels.

This very problem has been discussed here before with no 100% solution
(is there ever one of those?). Probably the best choice is for shareware
authors to band together and to 'license' one another to collect fees for
each other and then forward those fees on once they have reached an amount
which makes the exchange and/or bank fees worthwhile. Of course, this does
entail a certain amount of trust amongst the shareware authors themselves.

International Reply Coupons, available at most post offices, is another
potential source of payment for small amounts.

MasterCard and Visa are ideal but few shareware authors can qualify to
accept them. Those of us that _do_ accept credit cards is usually only
because we have qualified with our banks based on some other venture.

Any other _feasible_ ideas for registering shareware from other countries?

I'd be happy to say that, too, Vegard, but my somewhat limited testing
with the MagiCMac -demo- has shown otherwise.

I could not get that GFA 3.5 interpretor nor any programs written and
compiled with GFA 3.5 to run under the MagiCMac demo. Perhaps the *full*
version of MagiCMac now supports this?

If you CAN run GFA under MagiCMac, tell us how.

: I was just wondering if anyone knew about any software that allows
: me to send/recieve fax with my StE and US RObotics 14400 Sportster modem?
: Thanks.

I will post again... Try and read this if you are thinking of FAXing ever.

US Robotics 14,400 Sportster modems support FAX classes 1, 2.0, and 3

Out there there is:

CoMa (2.70) supporting FAX classes 2 and 2.0, which will drive your USR
However demo version only sends 500 _pixel_ lines, and it is 45
UKP to register.

HackFax: Seems to require Zyxel modems

StarFax (part of Starcall) may work, but is not fully GEM compliant, so I
gave up on it.

STraight FAX is a commercial offering, probably the best overall, but is
too dear for my requirements. Email toad@charm.net for more info.

Junior Office - Cutdown of Tele-Office
The package in the PD will only drive FAX class 2 modems (ie not
yours) BUT you can download from a German BBS a class 1 driver.
This program has a brilliant modular design, and handles sending
and receiving Faxes containing IMG's and Text.
IMHO: the best way is to ignore the docs, and just experiment -
Especially if you don't read German!

Hope this helps,

Steve Taylor.

Well, while you can generally hack almost _anything_ together so it will work, the ease of use of real 'plug and play' is seldom as easily obtainable as it is on the Mac. For example, flat bed scanners and digital cameras are two plug-and-play toys that come to mind. And any hardware item that uses the Mac's non-standard serial ports, of course, would be more difficult to connect to the Atari or other platforms.

Not that you couldn't if you were determined enough, of course. :)

My manual says this:

```
/---------\
4 | x x x x | 1
8 | x x x x | 5
12 | x x x x | 9
| x |
\---------/
13
```

(pinout diagram from external port view)

1- Audio Out
2- Reserved
3- General Purpose Output
4- Monochrome Detect
5- Audio In
6- Green
7- Red
8- Ground
9- Horizontal Sync
10- Blue
11- Monochrome
12- Vertical Sync
13- Ground

This information comes from the "520ST Owner's Manual" - page 75,
appendix D.

Don't know what "Reserved" and "General Purpose Output" are. Any
speculation?

Hi,
I'm new at this so forgive my mistakes.
Since it seems that Pure-C is unavailable (is this true ?) I am looking for an other C-compiler. I wanted the GNU C++ compiler, which should be available at ftp.uni-muenster.de. However, I can't reach the proper directory (/share/public3/atari/gnustuff/...). I can go to /share/public3, but when I try to go to the atari directory I get an error message from PPP. Is this a common problem (with other words, has anyone experienced the same), or has anyone an idea what is happening?
If there exists a "mirror" site for the GNU C++, I would like to know.
Thanks.

You can also use the superior GNU zip (gzip) to uncompress .Z-files.

I love the way your mind works. OBVIOUSLY any software that has
added support for floppies CAN'T POSSIBLY also give the standard level of
support for hard drives. The level of technical difficulty would be just
overwhelming!!
If you have any further comments, I'd really apprecieate it if you
made them constructive ones.

>case, carved a hole in the back of the Falcon for the cable, hooked

Yea, I'm afraid I discovered the easy way what you discovered the hard way :)
My old Mega 4 has a 80 meg hard drive and I had originally planned on swapping
it with the 65 meg drive in the used Falcon I got. But when I popped open
the Falcon I found the notebook HD staring me in the face :) So much for
that idea...

>To my experience ANY IDE device will work but the 2.5" are
>hard to find and expensive!

Hmm- well, compared to their 5.25" counterparts, yes they are more expensive.
But I've been digging thru the misc.forsale.computers.storage group and
you can find 150M 2.5" drives for around $125....

Actually, I've done almost what you've done. At my college we have
a large PC network. In one of the windows directories on the server,
there are loads of TrueType fonts. They all had the extender '.TTF'. So
having just bought NVDI 3 for my Falcon, I copied loads off and put
them in the 'BTFONTS' directory on my harddisk. But I have no ID problems,
or printing problems. (BTW - This was allowed, as students are allowed
copies of progs to help with their courses :-))

Don't forget to use the "scan fonts" button one of the NVDI CPXs.

So basically I'm not sure what the problem is. Try using one font at
a time. Maybe some don't work for some reason?

Simon.

> of all, how does one use an XFS? I have set up a partition for Minix,

Bung the .XFS file in C:\MULTITOS or C:\MINT. It should then load when you
reboot. You will need to use MINIT on the partition to set it up as a MINIX
one - but watch out as it will zap all existing data on it.

> I have tried to run (atarimgr and mintbash) have crashed. They do
> not run in a window as I might expect but print garbage on my menu

atarimgr is a port of the AT&T MGR windowing system. Won't run under MTOS.

Don't know about mintbash - but its probably config file related. Otherwise
what file extension dos it have? If its not a .ttp or .tos then MINIWIN
doesn't know to run it in a TOS window.

:-)

4412. Re: Atari 520ST System Software Needed

Newsgroup: comp.sys.atari.st
Date: 1995-03-14 04:24:47 UTC
From: BobR <76702.1466@CompuServe.COM>
Message-ID: <3k35qf$q5n$1@mhadg.production.compuserve.com>
Source record: 169355

The Atari ST operating system is contained on ROMs in the machine, thus NO "system software" is needed to get it up and running.

Just turn on the computer and the OS will boot.

The desktop is very similar to the Mac, so it should be easy to learn to operate, especially if your brother has any familiarity with the Mac.

As for other software, there is are very good archive sites on the 'net. You can ftp from atari.archive.umich.edu or one of its mirrors to get started.

If you have the Mac file system that allows you to read and write IBM style disks you can format a floppy to 720K (the Atari cannot read 1.44 Meg High Density disks) and download files onto it, and your brother's ST will be able to read the disks directly. (The Atari ST and IBM PC use almost exactly the same floppy disk format)

The atari archives contain PD and shareware terminal programs you can get for your brother so he can get online himself. The ST will use any standard PC style EXTERNAL modem with a standard 25 pin cable. One good terminal program to look for is called CONNECT.

Source record: 169361

] I have the basic 1 meg. 1040 ST with no hard drive.
]
] Where can I get software and a modem (in the U.S.)?

Modem: Call Microwarehouse on 1-800-367-7080 and order an external Magnum modem from them. Last time I looked a 14400 was $89.95. These are perfectly good reliable modems, and overnight delivery is $7, normal comms software for the ST is most easily gotten from a local user group, or if you can get at an FTP site and stick the programs onto a standard MS-DOS format disk, you get FTP to atari.archive.umich.edu and grab something like Uniterm or FZDSTerm from the ./atari/Telecomm/ directory (these are two of the simpler to use comms programs for the beginner as Uniterm has just the necessary, and FZDSterm has pretty much everything but requires very little done by the user, however, it's unsupported shareware, but the only limits are downloading a max' of 3 files a session IIRC.

The magnum modem is item #MM4746 (Catalogue number P49B11). This is quite an old catalog, and apparently they've dropped the price even further, so just ask them, most of their operators are quite pleasant and helpful. It has fax as well, and comes with various online offers as well as Comms & fax software for Windows and MS-DOS (which ain't much use to use ST'ers :)

Hope that's some use to you.

Source record: 169357

.. you didn't appear to make your case as well as he did.

In that case, you've missed the point of what I was trying to say.

This was never about "making a case" for any particular brand of computer.

The discussion started with Atari owners trying to make their system look better by running down other platforms.

I was never trying to make this a "point by point" debate on the individual features of "Atari vs. PC" or "Atari vs. Mac". Others here who can't seem to see the world in any other terms than "Us vs Them" tried to do that.

What I was trying to point out is that EVERY computer system has its own problems and it's pointless to try to ignore them by yelling louder about the problems some other computer has.

Computers are just computers. What's important is how you use them and how well you enjoy them.

As for deciding between upgrading an Atari system and moving to another platform, what's most important is to decide how you use the sytem NOW, and how you plan, or want, to use the system in the future.

Compare the applications for what you want to do that are available on both (or all) platforms, compare the cost to you of upgrading, either by way of buying new hardware on a different platform or by upgrading what you already have versus the benefits you can expect (realistically) to receive from the platform in the future.

Look at the ease of upgrading the system if you need to do that in the future, and the availability of support, both for the hardware and for any software applications you use now, or will want in the future.

Basic technical numbers often don't make very much differerence in the long run. What's most important is how well the system works for YOU, and how well you end up using IT.

And finally, I'm not a "pro-PC protagonist".. I'm a "pro-Computers" and "anti-bigotry" advocate.

I don't know if this is the right group for this but it's the best one I could find. I don't know about Atari and I need some info. Sorry for the boo-boo if it is one.
Anyway...

My mother has an Atari computer that she doesn't have much use for anymore. What would it be worth if she wanted to sell it. It's about 5 or six years old but hardly used.

The whole setup consists of:

Atari 1040 STf
Monochrome monitor SM125
2 button mouse
Roland DG PR-1012 printer
First Word (word processor)
Magic Sac (for Mac compatability)
PC Ditto (for PC compatability)
Misc. Games, drawing program and spreadsheet

Built in GEM OS. There is 1 meg of ram and no hard drive.

Any idea what it's worth, any offers? Responses very much appreciated.
Mention Canadian or US dollars please.

thanx :->
-Jason

My 1224 sc manual says this:

1- Audio
2- Not Connected
3- not connected
4- not connected
5- +15 V
6- Green
7- Red
8- Ground
9- H Sync.
10- Blue
11- not connected
12- V Sync.
13- Ground.

This is from my sc1224 Version 2 manual.

It does (has been doing it for a long time).

>As for having duplicate named files, were there any differences in the sizes
>of the files..?

These might be 'associated' files, sometimes used to encode special
Mac information. A properly written CD-ROM driver won't show these
files.

There is no TOS 5 (only a beta release called TOS 4.92). I don't think
that Atari will supply anyone outside Sunnyvale with the sources
needed to finish it. In addition, I doubt that C-Lab would be capable
to do it.

>crossposted in the usenet, such as

You can't *force* people. You might try to convince them, but history
tells me that even programs that have been available with english
interface and documentation didn't pay off.

>to name just a few.
>Kick them into their asses :-)

Or perhaps better: offer to do and *maintain* translations?

> However demo version only sends 500 _pixel_ lines, and it is 45
> UKP to register.

I would rate this as the best thier is and give it a +10, but it looses out as it locks you name into it, it diplays Faxes as they are recieved, has a built in Text Editor and is very very Fast, also has a optional DTE/DCE log to help with modem problems, and can run as a FTP site and supports Voice.....

NOTE: Now with English docs

>HackFax: Seems to require Zyxel modems

I thought this was BBS Fax software...

>StarFax (part of Starcall) may work, but is not fully GEM compliant, so I
> gave up on it

Again BBS Fax software...

>STraight FAX is a commercial offering, probably the best overall, but is
> too dear for my requirements. Email toad@charm.net for more info.

I have played with version 2.0 and found it very very slow, has none of the nice features that COMA has, no text editor, no voice or FTP option...

>Junior Office - Cutdown of Tele-Office
> The package in the PD will only drive FAX class 2 modems (ie not
> yours) BUT you can download from a German BBS a class 1 driver.
> This program has a brilliant modular design, and handles sending
> and receiving Faxes containing IMG's and Text.
> IMHO: the best way is to ignore the docs, and just experiment -
> Especially if you don't read German!

No Text editor and compicated to use, did not like our Fax back service..

I would buy COMA if it came with out the name lock...

4423. Re: ST's are dead!

Newsgroup: comp.sys.atari.st
Date: 1995-03-14 06:14:44 UTC
From: markuss@risc.techem.ruhr-uni-bochum.de
Message-ID: <3k3c8k$m2b@rubb.rz.ruhr-uni-bochum.de>
Source record: 169371

[A few lines deleted]

: Now, let's see the ST trying to run a network without even half as much
: hassle?
: Are there actually any ethernet cards for the ST? I know of a cartridge
: port device, but is that one ethernet?? And I picked up my network cards
: at 5 pounds each, and I'm sure that the ST equivalents are a bit more
: than 5 pounds.

: [snip]

Yes, there are Ethernetcards for the Atari-computers. In an normal ST, which
you must compare to an XT (because it is developed in 1986) it is very
expensive to install one. But thats not because of the hardware. The software
(TCP/IP) is very expensive. On the newer Atari computer or clones it is much
easier because they have a Mega-ST-Bus or a VME-Bus. The developers of Linux
told me on the ProTos last autumn, that they have soon a card finished, that
connects a normal Ethernetcard for the PC to the Mega-ST-Bus. So it's not
more expensive than with a PC.
On the other side we have here a network with PC's, one ST, a few Macintosh's,
and a 386 with Linux (as host), a HP9000 (as host) and two IBM 6000 (also as
host). So it's a very heterogen network. My ST and the Macintosh's work good
with the host, having no problem at all. The PC's have much problems. Our Sysop
must configure at least one PC per day new, because of trouble. So that's
the few hassle you mean ?

Ciao, Markus

Craig Graham (Craig.Graham@ncl.ac.uk) wrote:

: Steve Jobbs WAS NeXT, and he certainly had a long history of computers
: (he created Apple Corp in his garage remember).

But NeXT was not Apple. Nor was it the giant Apple Corp turned in to.
NeXT, for all its popularity, might as well have been back in his garage.

: Have you ever used a NextStation? They are wonderful. The quality of the
: apps that came with them was high enough that many folks wouldn't want any
: others for quite a while. Steve Jobbs & co did a wonderful job on the machine,
: and to be honest, had they continued to make them I would have bought one
: myself. I would consider getting a PC to run NextStep on if the cost of NextStep
: wasn't so ridiculous (ie. almost the same as the hardware it runs on).

Yes, I have used a NeXT, and it was a _very_ nice machine ... for apps. But
its uses were limited to busines ... perhaps that is the market it was
aiming for, but it didn't get popular in that market. A market dominated
even then by IBM and to a lesser extent Apple.

: In the workstation market it was aiuming for, the Next machines were very
: competitively priced - remember, they were competing against the likes
: of Sun & HP, not your average PC clones.

They might as well have been competing against clones; it got them just as
far.

: Erm....my falcon takes quite a while to boot as well, ('coz of all the
: patches I use to get a nice comfy system), and even longer if I'm
: using MiNT-X.

My system takes about 1 minute to boot up from switch on to sitting at Neo
4. That's with about 10 AUTO programs, all but one of which are
enhancements; the other is the TOS 1.4 patch.

4427. C-LAB FALCON MK II here !

Newsgroup: comp.sys.atari.st
Date: 1995-03-14 08:08:38 UTC
From: m9003@abc.se
Message-ID: <3k3iu6$4tc@oden.abc.se>
Source record: 169369

Hi Folks...I'm sitting here with the first non Atari F030, namely
the C-LAB Falcon MK II wich I got from the swedish general agent
yesterday. I haven't got a full tech-spec. on it yet but it has a
500 Quantum Daytona SCSI drive internally and 14 Mb of Atari RAM
and looks very much like a Sunnyvale F030 except for the new sign
up to the right saying (in green against grey) "C-LAB FALCON MK II"
The internal SCSI is set up with ICD and I've got some problems booting
my IGb Micropolis with it, but I think this is because my hot-rod
Syquest SCSI-case seems unwilling to change ID nr. from 0, wich of
course makes it collide with the internal drives SCSI 0 ID.
But I'll get that fixed today. So what's new more than SCSI internal ?
I jes don't know, folks, but i reckon' they've done the audio fixes
and maybe something else....expect to get more specs. from C-LAB soon
though and I will of course test it in my studio and compare the
internal audio handling to that of my Atari F030.
More Later
Martin R.

Yes.

>they are going to do a new manual for Audio? AFAIK the manual included
>with the Atari package is the Mac manual, with a short addendum for
>Falcon030.

Yes, the audio manual should follow the style of the main manual (more
like the old NSL manual). However, if you're looking for loadsa
documentation about Falcon Audio forget it - Falcon audio is not a
priority, due to low sales of the Falcon.

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Does anyone have an idea if is it possible to connect F030 to Internet via
LAN port and how to do that? In my mind it is possible. I just have to
find system connected to Internet with the LAN port and with apriopriate
software (comm protocols for LAN). Then I have to look for the same
software for my F030 and I' at home (I meen in Internet :). Can anyone
tell me something about this problem?

regards,

Simon.

]What direction are they going in, staying with the Amiga and going PC?

I had a conversation with them a month or so ago, in which I expressed
the opinion that it was hardly worth their trouble bothering with the Falcon
considering how many had been sold (a silly thing for a Falcon owner to say
I know), and they said "Oh no, we're fully behind it, and we're still
developing stuff for the Atari."
It's a little reassuring, but I'll believe it when I see it (and can
afford it :-).

That's a shame, 'coz I sat playing Towers2 for 4 hours last nite, and it's
the dog's b*llocks....VERY fast, great sound, excellent graphics, playable...
This is the sort of game that really does show that the falcon is a great
games machine......

Anyone else gonna back me up here? I've managed to reach the third floor,
but I'm a bit stuck now. I've got the armour, bow & arrows (but I used them all
:( ), got the Axe Spell & Food Spell, found the secret passage on the
second floor with the flying eyeballs in it. Got the boots from the toilet
and the silver & gold keys by killing the janitors on the first level -
but there is one door on the first level that these keys don't open.
Does anyone know where the third key is? Also, what does pulling the chain
on the first level do?

Craig (lost in the Tower, and getting ready to pay for the rest of the game).

The message that started this thread was abusive to ST owners and users, and promoted the PC. In fact it seemed to be a PC owner attempting to make his system look better by running down the Atari ST. My memory of it is that it claimed that the PC was vastly superior to the ST in every way, and that anyone who did not immediately dump their ST and buy a PC must be a totally clueless moron. The final line of the original message was "Get a life, get a PC." I remember this quite clearly because I made a joke about needing the extra life to create boot discs so that my daughters can run games on it.

offer if you are interested. All sensible offers will be considred.

a. 20 MB SCSI external hard disk. This is Rodime 20 MB HDD originally
taken from Apple Mac external drive. The solid metal casing was
made by me. ICD host adapter. If you are interested only with
the ICD adpater, I can arrange that too.

b. Prospero Pascal compiler for Atari GEM. An integrated Pascal
developement system with debugger. Great documentaion.

c. Hyper Draw GEM-based vector drawing program.

d. A number of GEM/TOS programming books. Mail me if you are
interested.

Please reply via e-mail.

4444. TeraDesk 1.40

Newsgroup: comp.sys.atari.st
Date: 1995-03-14 15:09:06 UTC
From: thopman@uoguelph.ca
Message-ID: <3k4bii$sg3@ccshst05.cs.uoguelph.ca>
Source record: 169386

Where can I get TeraDesk 1.40? In AEO 0403, Michael Burkley says he found it at ftp.uni-kl.de, but I am unable to find it there. So...where can I find it?

Thanks...

THeo

4445. Help with STE memory

Newsgroup: comp.sys.atari.st
Date: 1995-03-14 15:15:29 UTC
From: firefox@byron.apana.org.au
Message-ID: <3k4bv4$bn1@hack.byron.apana.org.au>
Source record: 169387

Hello all,

I really need some help here with my STE.
It seems I have a STE with 2 sipps and 2 simms for memory and I want to upgrade the memory,to explan better the diagram shows how it looks.

```
------------------------------
| sipp |
1 | _ _________________________ _ | this one is solded to the board
| simm |
2 | _ _________________________ _ | this one you can take out
| sipp |
3 | _ _________________________ _ | same as 1
| simm |
4 | _ _________________________ _ | same as 2
|_______________________________|
```

I like to know if I place 1 meg simms into slot 2 and 4 will I have 2.5 megs or do I have to hard wire somthing else.

If any one can help please as I would like more than 1 meg of ram.

E-mail me at firefox@byron.apana.org.au.

Thanks,Mike

IN a previous article, pl4266@u.cc.utah.edu (Paul Luscher) wrote:

> Thanks a lot for presuming that my NVDI is pirated! I bought my
>Falcon from a defunct ATARI dealer so if I didn't get disks or books for
>anything I suppose I should delete my whole DAMNED hard drive!?

Unfortunately, 'yes.' Even though you purchased your computer (and the
software which came installed upon it in good faith), it is still pirated
software unless you have the original floppy or a license to use it.

>If you smug cheese-heads would like to sell me a second legal copy of NVDI
>you could atleast give me the # to Toad or another source for ATARI stuff,
>as there is no ATARI dealer within 500 miles of my house!

'Cheese-heads!' Hahahaha.... I like it. :) Anyway, welcome to the Atari
club. :) Here's how to reach Toad Computers which I wholeheartedly endorse:

800-448-TOAD orders
410-544-6943 info
410-544-1329 FAX
410-544-6999 BBS
toad@genie.geis.com -or- toad@charm.net -or- http://www.charm.net/~toad/

>Show me how I'm breaking the law by buying software from an ATARI dealer
>who sold it with my system pre-installed.

It wasn't your fault, granted, but there is no difference between your
situation and someone innocently buying stolen goods from a street vendor.
It's not fair to you, I agree, but it's still illegal to keep the software.
You have to make (and live with) your own choices, of course.

> People think they are so wise and govern their whole lives with
>hazardous presumptions instead of examining the evidence!

Well, by your own admission the 'evidence' speaks for itself. But I do
agree with you that people should not be so quick to judge; and I surely
include myself in that bunch.

Cheers,

While rare, remember that the original 520ST units came with TOS 1.0 on
floppy, not in ROM. If the person you are replying to has one of these
olden beasts, just turning it on won't work.

And BTW... wish you would quote just a 'bit' of the original poster's
message so it would be easier to know what you are on about, Bob. I'm
all for limiting wasted bandwidth, but we can go to extremes, too. :)

Whatever...

Source record: 169399

Yes, I wasn't clear enough.. this "discussion" has been ranging over several message threads, originally starting in the .advocacy newsgroup where I objected to a thread where a non-Atari owner had asked for ONLY the Atari owners sides of what was so great about Atari computers.

That was fine, as long as it was positive experiences about Atari systems, but it very quickly degenerated into "The Atari is great because the PC sucks".

It's wandered over into here lately, which is too bad, as this is an inappropriate newsgroup.

It's also inappropriate to tell you that with DOS 6 you can create easy to use bootup menus, just like using an Atari bootmanager, so your daughters can play those games without needing boot disks, so I guess I won't...

:)

It's interesting to note that I've *never* advocated that a current Atari owner "dump their Atari and get a PC"... I spend a lot of time working with Atari computers and helping Atari owners use them. But I no longer can in good conscience recommend them to NEW computer users except in very definate circumstances, and unless I am very sure they know what they're getting into.

It's sad that it's come to that, but that's how it goes...

BobR

4454. TT Specs?

Newsgroup: comp.sys.atari.st
Date: 1995-03-14 16:47:31 UTC
From: troyc@bnr.ca
Message-ID: <3k4hb3$lb@batph8.bnr.ca>
Source record: 169400

Hey everybody! I recently purchased a TT (hasn't arrived yet, but I'm waiting) off the net here. I already have a MegaSTE, but would like to know about the computer I am about to receive.

How similar is it to the MegaSTE? The obvious difference is the CPU, of course, but when I looked through an old issue of STart, they really only provided basic information (December '89, I think). Most specifically I would like to know the following:

1. Can I still use my old Atari color monitor I have had since 1988? I realize that I probably would still be limited to ST medium with that monitor, but at least I would be able to see what I am doing.

2. What is the processor upgrade path? Is it as simple a dropping a faster '030 in, or would I have to purchase a hardware board to do this? What about '040?

3. What about memory? Are they SIMMS? How much ST memory can I put in? How much TT "fast" RAM can go in? (indirectly then, what is the total?) What does it take to put more memory in as far as expansion cards?

4. FPU support?

Any information would be appreciated.

Thanks

Source record: 169301

In article <3jvsak$9t@dux.dundee.ac.uk>, rmccall@mcs.dundee.ac.uk (Rod McCall) writes:
>John Watkins (jwatkins@cix.compulink.co.uk) wrote:
>: >Yes we do need a desent Mag more in the line of ST-World, most people here
>: >are just fed up with the format of ST-Review..
>: >
>: >To much Falcon stuff, Falcons are not sold in this part of the world,
>: >and the ones that I have seen are some 3-4 more than a good PC clone...

To bad - every time I use MS Windows, it makes me appreciate my falcon more
and more. In every day use, the f030 is a nicer, faster enviroment than
a windows based PC (and beings as the PC is obviously the faster machine,
it just shows how badly written windows is).

>: >So BRING BACK THE ST-WORLD MAG FORMAT......!!!!

People must have short memories - I've got every issue of ST-World that
was ever printed, and they made a point of trying to use & review the best
hardware they could. They had massive coverage of the ATW/ABAQ, a machine
that few people ever clapped eyes on, much less actually used (it WAS very
nice though). They also had a tendency to use MegaST's (the top of the
range at the time) for their reviews. The TT was just becoming available
in numbers at the time the Mag folded, but they would doubtless have used
a TT as their standard had it continued - and quite right to.

>: Since the editor is ex-ST-Review as are most of the writers, I don't
>: think you'll get your wish...
>
>ST Review may have been a bit 'Falconised' but if you think about it
>
>At the end of the day, the Atari computer platform can only survive if
>people upgrade their machines either to a Falcon, Medusa etc or
>modify their ST to make it super fast. You simply cannot expect programmers
>to squeeze huge amounts out of the same old hardware indefinately.

This is true, but bear in mind that no computer has been programmed right
to the bare limits of its hardware since the ZX81 - anyone remember 1K Chess,
or High-Rez Invaders (256*200) with sound on a machine with only character
graphics and no sound subsystem at all? There is a lot of stuff that can
be done with an ST that generally isn't, such as the switched palette
& full screen overscan tricks that we all know are possible, but seldom
see outside of a couple of 'gee-wizz ma, look what I can do' demos.

So, yes, people have to move on to new hardware, but it's a shame they
always have to do it before the old hardware has realised it's full potential.

>However I do agree, perhaps a bit less Falcon stuff would be better, and
>bear in mind I am a Falcon owener!

As am I.....

4456. Toad Catalogs

Newsgroup: comp.sys.atari.st
Date: 1995-03-14 16:50:20 UTC
From: "Toad Computers, Inc." <toad@charm.net>
Message-ID: <3k4hgc$9om@canton.charm.net>
Source record: 169302

To anyone who's wondering: Gee... where is my Toad Catalog?

A few folks have expressed concern that their requests for Toad Computers Catalogs have been, as yet, unfulfilled. Well, I just wanted to take a second to clarify the situation, so no one feels like they are being ignored.

First, anyone in the United States (or available through US Mail via APO service) who was on our mailing list as of December should have received one of our catalogs. If you would like a catalog and have not received one, please let me know.

As for Canadian customers, we have made attempts to do bulk mailing to Canada with limited success. Any customer who has placed an order with us should have received a catalog with their order. Additionally, we have made catalogs available to Canadian user groups, and we will also be bringing catalogs to the TAF show in Toronto on April 1.

In the meantime, it is simply too expensive for us to send catalogs to Canada, and most of the rest of the world, for free. At more than $1 in postage per catalog in many cases, we simply cannot do this on a large scale.

So, we appreciate your request and we are storing your names for future mailings. If we can figure out how to get a mailing into your area, in bulk, at a reasonable cost to us, we will. Otherwise, to get a catalog, your safest bet is to place an order of some kind and we will include a catalog there.

Also, if you have any questions about our products our services, please contact us via e-mail at toad@charm.net. Or, visit our Web page at http://www.charm.net/~toad/. We have a lot of stuff online there and we're working to get a lot of the stuff in our catalog moved online. Our "Toad's Specials" file contains our most popular (and best priced) items, and this is always a good place to start. If you want to jump directly to this document, go to http://www.charm.net/~toad/specials.html.

Also, please be aware that after sending out over 25,000 of our v3.42 Atari catalogs, we have under 1000 remaining. We are working on new mailings and catalogs now, though, so please be patient and wait for these new materials.

Thanks again for your support of Toad Computers, America's (and now the World's, if we can get catalogs out there...) Atari Source. Again, if you have any questions, please direct them to me at toad@charm.net.

Dave Troy

4457. For Sale: Atari ST systems

Newsgroup: comp.sys.atari.st
Date: 1995-03-14 16:54:24 UTC
From: dave_clemans@mentorg.com
Message-ID: <3k4ho0$opv@hpmos.wv.mentorg.com>
Source record: 169305

If anyone is interested.... I've got the following for sale.

Atari Mega ST
4 MB memory
dual video shifter chips
socketed cpu chip
TOS 2.06
upgraded power supply

a 1024x768, 16 color video board is currently installed in the
"mega" bus slot

I also have a Gadgets by Small "Megatalk" board (that gives a Mega ST
Mac compatible serial/SCSI ports) that is not currently installed

plus some spare cpu chips, custom chips, etc.

ICD "FAST" 250mb tape drive, including a Quantum 105mb hard disk drive

Atari SC1224 color monitor (made by JVC)

Atari SM124 monochrome monitor

Atari 1040STF system
unmodified; 1MB memory

a whole bunch of miscellaneous software

Panasonic 1080i dot matrix printer

I'll ship all of the above in the US for offers above $500; if you're interested
in individual pieces make an offer.

Thanks,
dgc

DAS>Hi all,
DAS> I'm a total novice in Atariland. Here's my question: Is there a
DAS>program which is good at recovering data from Atari ST disks? I have a dis
DAS>with files which were either accidentally deleted or partly corrupted.

I have been experimenting with this same problem. There is a Disk
Doctor from Antic (out of business). Then there is the analyze function
from pro copy. This tells you what might be the cause your disk will not
load.

Even with these tools some problems will not be able to be corrected. I
ran the 1725 BRE Gnu Chess disk thru the pro copy and learned that the
zero track was reported to not be formatted. Then there were some crc
errors reported on a couple of other tracks. However, trying to get
Disk Doctor to correct the problem only resultes in repeated screens
informing me that the drive in A had problems. I have seen disk doctor
reconstruct a corrupted os know that in some cases it can solve your
problem.

So you believe that using another language than English for international communication would be the end of the world? I have not said that English could be replaced immediately, it certainly takes some time to change!

>Why the national pride about an international language...I know you cited
>a dead language being a good option, buy why not one that is already in
>place (mostly ;)

There is no national pride in what I've said. At least, I can't see any.
I just would like to have an international language which gives the same chances to all people in the world. For me it is unacceptable that I do have to write articles in English language. I have to look up words in the dictionary, I am not sure about style questions and so on. An English writer does not have all these problems. Why should he have this advantage? Is English more expressive as Italian, German, French, Spanish, etc.? I don't believe so.

Andreas

No. You might be able to use a standard VGA monitor, but don't count on
it, since the video signal is somehow screwedup so that few monitors
could understand it.
: 2. What is the processor upgrade path? Is it as simple a dropping a faster
: '030 in, or would I have to purchase a hardware board to do this? What
: about '040?
As far as I know, there is no upgrade path, other than the CaTTamaran,
which basically ups the speed of the CPU to 48 MHz.
: 3. What about memory? Are they SIMMS? How much ST memory can I put in?
: How much TT "fast" RAM can go in? (indirectly then, what is the total?)
: What does it take to put more memory in as far as expansion cards?
ST memory goes up to the standard 4 megs. You may be able to put more in,
up to 14 megs like in the Falcon, but why? TT memory is much faster, and
you can go up to 4 gigs...
: 4. FPU support?
Yes. Plug and play, as far as I know, either 68881 or 68882.

All these items arrived safely. Thanks. Do you know where one might get the Neo disk 2.5 or better that the Neo CLI keeps askigng for?

Also as I have purchased many computers and had them shipped I would gather that California is better hunting grounds for used equipment than is Mississippi.

I am in the market for hard drive as my collection of Atari's. (520, 1040, and MEGA with 4 megs) a truck load of software. Have been paying much attention in this conference.

Also there was an instruction sheet for a Aussie Poker game for the ST line. Do you need fro me to mail it back to go with the games. I dug back to the original message and this was never mentioned?

: > IMHO: the best way is to ignore the docs, and just experiment -
: > Especially if you don't read German!

: No Text editor and compicated to use, did not like our Fax back service..

It calls an external editor. Which is not a problem for most people, AND
it allows you to use your favourite.
It is not complicated to use, although the instructions make it seem to be.
I have sector edited the RSC's into English and will probably write a small
"quickstart" document in English.
And then, who knows, if it's legal, I may upload the English version!

: I would buy COMA if it came with out the name lock...

Coma is good, I agree, but all-in-all I prefer Junior Office or STraight FAX.

Steve Taylor.

That is correct, read on..

> Have they moved them in the UK or what..??

Yes. We now have BWT, British Weekend Time. This was especially designed
to confuse people in New Zealand and stop them accessing our ftp sites, so
we can have more access for ourselves in the UK.

> I know week-ends have changed a lot, they all most don't exist here,
> we have 7 day a week shopping and no week-end wage rates now...??

BWT weekends are designated to start whenever you go off line, that way you
won't know about them but everyone else will. ATM the only drawback we've
found to this new system is the amount of extra whinging generated by
awkward kiwi's.

> Any assistance would be greatly appreciated.

I got my GT8000 over two years ago from CGS Computerbild (Phone: 0181 679
7307) with GT-Scan3. I think they are/were official Epson
Scanner dealers.

Although they provided an adapter to enhance the parallel port so that the
scanner could work with an ST, I've used it 'out of the box'
with the TT's SCSI port.

GT-scan3 has since been upgraded to GT-LOOK II which is also available from
them and is in the new catalogue from System Solutions/Atari Workshop
(Phone: 01753 832212).

There is also a german program around that is apparently a PD
prg/acc GDPS driver for the scanner, but although I have it here
I haven't actually found a use for it. I can't find the file name but if
you're interested I'll look for it again.

Sorry, but speaking from experience, I have to qualify that somewhat: it depends entirely on what kind of PC you have. We had all sorts of problems even at 2400 baud with Bad CRC and Data Overrun etc. on our, admittedly ancient, PC XT. As soon as we bought and installed a 16550 UART serial card, this got much better, the problem disappeared almost completely. Of course, being an XT the computer uses DOS exclusively, so your statement seems to be only half-correct. By the way, after installing the serial card, I can now reliably transfer files via null modem cable between XT and ST at 19200 (using Flash on the ST and making use of the software flow control.)
Cheers, Achim.

4479. Programming Contest Deadline Near

Newsgroup: comp.sys.atari.st
Date: 1995-03-15 03:20:51 UTC
From: szhays@dale.ucdavis.edu
Message-ID: <3k5mej$ce4@mark.ucdavis.edu>
Source record: 169328

The deadline for the YAC Freely Distributable Software Contest is almost upon us. In case anybody missed the original announcement, I am posting it again. If you have any questions, please e-mail me. I need to have any contest entries in-hand by Friday. As there could be problems un-encoding mailed files (I've had some problems in the past), I recommend early submissions.

-------8<------------8<---------

YAC SHAREWARE PROGRAMMING CONTEST

Shareware Programmers: Would $50 help inspire you to finish that program you started over the summer but never finished? What if we could help you distribute your software to local BBS's, the major on-line services, the Internet, and at SAC Expo? We could also help you by writing and printing documentation to go with your program (we can translate from German to English if necessary). We'll even throw in a years membership to our local user-group: with its monthly newsletter mailed directly to you, and the honorary title of YAC Official Programmer for a year...

THE YOLO ATARI CLUB IS HAVING ITS ANNUAL SHAREWARE PROGRAMMING CONTEST.

Entries must be TOS programs new for 1995 and must be received by March 17th, 1995. They will be judged based on originality, compatibility (remember, there are all these new multi-tasking solutions and Falcon resolutions to try and respect), efficiency, and dependability.

Entry is simple, just mail your entry to the Yolo Atari Club at 1129 Fordham Drive / Davis, CA 95616 / USA. Or e-mail us an FTP-able location where your program resides (remember to include your program's name and the full path to it), although give us an extra week if you plan to do this so we can be sure to have time to download it. We can be reached at elhays@ucdavis.edu. Remember to give us a way to contact you. The winner will be notified by the end of March and then announced on-line and at the Sacramento Atari Computer Exposition, April 22nd, 1995.

Entry is free (or the cost of a single letter), and could earn you $50, fame, and glory. So why not give it a try?

>only go up to 12-bits and most Unix is 16-bits.

Well, the only limitation on the Atari is memory (unlike on a PC where
segmentation used to be a problem) so if you have more than 512k you can
handle up to 16-bits easily.

>compress.ttp can be obtained from a.a.u.e

Or indeed almost any other good Atari FTP site.

4484. Monitor & Jag (III)

Newsgroup: comp.sys.atari.st
Date: 1995-03-15 06:16:38 UTC
From: haines-jeremy@cs.yale.edu
Message-ID: <3k60o6INN2m3@JAGUAR.ZOO.CS.YALE.EDU>
Source record: 169258
Cross-posted to: rec.games.video.atari,comp.sys.atari.st,comp.sys.atari.st.tech

Thanks for all of the responses to my last message...I now have a
cable between the SC1224 and the Jaguar that MOSTLY works. I was hoping
that I could get some advice about fixing these two problems:

o The monitor needs Hsync and Vsync inputs, but the Jaguar only
seems to have Hsync and composite sync outputs. With the
Hsyncs attached to each other, and the Jaguar's Csync
attached to the monitor's Vsync, I get a decent picture, but
I have to stabilize the Vhold every time I turn the Jaguar
off and on again. Any way to handle this?

o The audio in the monitor works fine, until I attach the video
portion...then the sound stops. Can't figure this one
out...I have the audio and audio ground lines attached
appropriately...the Jaguar doesn't cut off audio output when
a monitor is attached, does it?

Also, the current picture is pretty dark, though I hear that the
older SC1224's have dark pictures in general...any way to fix that?

Thanks in advance...and please respond to me in email.

: >----snip-----<
: >Tom
: I am curious. What hardware could you get for the Mac that you couldn't use on
: the Atari, and vice-versa? I can't think of anything?!@?#@?

I have always wondered what is it in Macs that makes them so "great"...
Because they aren't that. Right yesterday I nearly lost my nerves trying
to get PageMaker print out what I asked it to print. No way. Postscript
has its good points, but too often it really is NOT WYSIWYG. Letters
that were o.k. on screen, didn't have proper spacing when printed. I
guess, Mac users don't even notice the problem? No, because they have
got used to proof-prints - and they have never used a DTP program that is
absolutely accurate: Calamus SL. The more I use PC- and Mac-programs,
the more I have to honor the Calamus' programmers.

You can magnify a Calamus document e.g. 1000% - and see EXACTLY what will
be on the paper or film. The rasterizing, color separations, everything.
Even though Calamus isn't entirely bugless, one can trust it: if
something seems to look good on your screen, it will look good printed,
too. I like Atari's own scalable font system, Speedo GDOS, too. Now that
it finally has begun to work as expected, the quality of printing is
mostly excellent, and well comparable to any competitor.

This is what I need: accuracy. Control over what you do. Macs are easy
to use (at least in the beginning), but they do what _they_ want to - not
what I want them to do. For example, if I have a file of 1.7 megabytes,
I can always tell my Falcon: "hey, now I need a bigger high-density
floppy, so make me one!" - and it will format me a perfect 1.7 Mb floppy
that works just as well as the 1.44 ones. Well, try that with Mac! The
machine is so damn "smart" that I feel like driving a train instead of a
car: whatever you do, the machine goes to only one direction (or
backwards..). You can's steer a Mac. Many people don't even want to. For
those, user-friendliness comes from simplicity. Less selections, easier
use. No need to think. I don't like that...

The keyboard of the Mac I mostly use, Centris 660AV, is - to put it
mildly - awful. Even Falcon's own keyboard, though far from perfect, is
better. The mouse doesn't feel good either. And after using resolutions

like 800x600 on Falcon, the 640x480 doesn't impress. You can say I have prejudices towards Macs - I can't prove you wrong. Still, what if people really think too much of their Macs - because Mac means some kind of luxury and being "creative"?

God knows how many times I myself have wondered, if Atari's time is over - and it's time to change the system. And after watching those ultra sexy Pentiums and Power Macs, one's Falcon really doesn't impress anyone. But one thing always seems to change my mind. I don't use a computer just for fun. It has to WORK. This means: I have to enjoy working with it, and be able to get out the results I expect to have.

No computer I have used since 1986 has felt better in my hands than Atari does. Calamus is a tool without competition: it's in its own class. Papyrus isn't as glorious as Word 6 - but it is a joy to write with. And things like file selector "Selectric", great telecomms programs like Connect, etc... After getting used to a computer that really does its job, and is fun to use - well, who can enjoy any PC? Or even Mac?

Think about that, before buying a brand new Pentium or Power Mac. You will certainly get powerful hardware - but what's the use of it if you don't _like_ using it..? And I don't think many of us do, if we're honest to ourselves. Atari has that special touch the others still lack.

MacMagic looks promising, but there is still the awful keyboard around... =-(

With big partitions under Minix you might need an XHDI compatible hard disk
driver like HuSHI or HDDRIVER. There is some information about this in the
MiNT documentation. Didn't you read this yet?

: How much do you ask. This is starting to get beyond my imagination.

Kim, if there is a bug in the program, the chances are pretty good that the user is going to want to see it fixed -- so that they can use the program bug-free. If the author does not know that this bug exists, how is he to fix it? Not even beta testers can catch absolutely everything under everyth possible circumstance. Sometimes users will find bugs in released programs -- this is not exclusive to Shareware; commercial programs frequently experience bugs, too. In fact, I'd have to say that MoST programs do. What is wrong with asking users to report any anomalies they might find in a program? It is in their best interest, too, after all, to make for a better (and bug-free) program.

4488. [Q} Which CD-ROM allows reading Audio-CD's over SCSI?

Newsgroup: comp.sys.atari.st
Date: 1995-03-15 08:10:14 UTC
From: jhh@cwi.nl
Message-ID: <jhh.795255014@news.cwi.nl>
Source record: 169333
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I recently read somewhere that some CD-ROM players allow reading audio-CD data digitally through the SCSI interface. I couldn't find an answer in the FAQ, so maybe someone out here knows
- which CD-ROM players allow this (and also allow Photo-CD reading, and is dual -- maybe even quadruple -- speed).
- the drive should be external (and SCSI off course): or is there an easy way to install an internal, or even IDE, CD-ROM to a Falcon (can you convert IDE to SCSI?)
- which driver I need for this on my Falcon 4/65
- how much I should expect to pay for the drive...
I realize, quite a lot of questions. If you have answers to some of them, it would help me lot.

Thanks in advance,

JaHe

4489. Re: TT Specs?

Newsgroup: comp.sys.atari.st
Date: 1995-03-15 08:36:57 UTC
From: mtaylor@perth.DIALix.oz.au
Message-ID: <3k68v9$774$1@perth.DIALix.oz.au>
Source record: 169334

Hello Troy,

I have had previously a Mega STE and now a TT so I might be able to help you with some of your questions.
troyc@bnr.ca (Troy Carpenter) writes:

>1. Can I still use my old Atari color monitor I have had since 1988? I
> realize that I probably would still be limited to ST medium with that
> monitor, but at least I would be able to see what I am doing.
I really don't know the answer to this although I think not. I have the TTM194 19" mono monitor (supports TT High at 1280 x 960) and is absolutely superb. Try and find one of these if you can. I also have the PTC1426 colour monitor which I beleive is a VGA monitor. I don't use it much but it does all the other TT resolutions.
>2. What is the processor upgrade path? Is it as simple a >would like to know the following: dropping a faster '030 in, or would I have to purchase a hardware board to do this? What about '040?

Well I beleive the only item I know of is the CaTTamaran board from Cybercube Research which simply runs the existing 68030 32 mhz chip at a speed I think up to 48 mhz. I don't think 68040 is pin compatible or software so. Let me know the specs of your TT and I can tell you some other interesting experiences.

>3. What about memory? Are they SIMMS? How much ST memory can I put in? > How much TT "fast" RAM can go in? (indirectly then, what is the total?)
> What does it take to put more memory in as far as expansion cards?
The TT I have has 4 megs of ST ram and 8 megs of TT Ram. I have a third party TT Ram board which will go up to 128 megs. I beleive the TT can address up to 256 megs of TT Ram. When I first got my TT it only had the 4 meg os ST ram and I found it wasn't much quicker than my Mega STE. Anyway when I put in the Atari 4 meg TT board it was like TURBOCHARGED???? You have gotta just have TT ram. I do have a spare 4 meg TT ram board if your interested by the way. My friend and I are just modifying it ti take 4 30 pin SIMMS 4megs to give a total of 16 megs TT Ram.

>4. FPU support?
Don't know about this but I am sure some program may use it. I think that maybe the 68030 uses it transparently anyway as the TT is way fast. Don't be fooled by all this talk of clock speeds etc. I have just put in my new TT Ram board and a Quantum Lightning 730 meg hard drive and the machine is now much faster. A lot of what people talk about is just dribble. It doesn't matter how fast the chip is if the hard drive is slow or there is not enough memory. I have seen many PowerMAC and PC's that load programs very slowly, take forever to redraw the screen and generally don't excite me.

I'm sure you will be like me and love your TT it is really a great machine. You can expand it in many ways and at present I need to buy another machine but can't decide between a PowerMAC or Pentium so I think I will wait till the new PowerPC CHRP compliant units ship so I can run whatever software and OS I like to use or for that matter need to run the software I use.

Have fun and let me know if you want any other info...always pleased to help if I can.

Regards from OZ

4490. Towers II save game

Newsgroup: comp.sys.atari.st
Date: 1995-03-15 09:04:18 UTC
From: ralunsfo@uncc.edu
Message-ID: <3k6aii$pfn@news.uncc.edu>
Source record: 169337

Has anyone with a 4-meg Falcon been able to save a Towers II game? Every time I try, it says 'Not enough memory'. I've run from a clean system, getting as much as 3.9 megs available before running. I've also checked hard drive space, and that is not a problem either (unless those save-games are *huge*!!).

Thanks,
Russ

Oh yeah? So how does it achieve this, as I consider it an impossibility
that a slower CPU may result in a faster machine. And even the 150 has got
a 030/33 inside.

>Look at MagiCMac on a Performa 630 and you may forget your TT...

A Performa 630 is hardly a "less powerful" Mac.

Was it Dragan who said that MagiCMac roughly gives you half the speed
you'd expect from an Atari?

:> :This is not true. Please don't tell lies. Loss of data with high speeds
:> :will only (possibly) occur when you use MS Windows, because MS Windows
:> :doesn't handle interrupts very well. When using DOS you will NOT loose
:> :any data with 19k2. So this has nothing to do the PC architecture, but
:> :it has to do with choice of OS. BTW a 16550 UART is recommended whenever
:> :you use a multitasking OS (OS2, Linux, AIX, ...)
:> Oh, and I forgot to mention that almost ALL internal modems (14k4 and
:> faster) come equipped with the 16550 UART.
:
:Sorry, but speaking from experience, I have to qualify that somewhat: it
:depends entirely on what kind of PC you have. We had all sorts of
:problems even at 2400 baud with Bad CRC and Data Overrun etc. on our,
:admittedly ancient, PC XT. As soon as we bought and installed a 16550
:UART serial card, this got much better, the problem disappeared almost
:completely. Of course, being an XT the computer uses DOS exclusively, so
:your statement seems to be only half-correct. By the way, after
:installing the serial card, I can now reliably transfer files via null
:modem cable between XT and ST at 19200 (using Flash on the ST and making
:use of the software flow control.)
:Cheers, Achim.

I was talking about a modern PC: 486 and higher. the 486 has become the
mainstream pc, so I think you can savely say: pc == 4/586 nowadays.
no problems with 14k4 when using DOS (without 16550), only when using
multitasking OS's (like I stated).
I must admit that my assumption that XT's have become desolate is a bit
weird (coming from an Atari user!) ;-)

Source record: 169339

Re: Early STs having TOS in RAM...

That's certainly true, but the number of those systems that were sold without TOS in ROM was very small, and most of those have been upgraded with ROMs by now.

Usually when dealing with someone who is very new to something like this, I try to keep it as simple as possible.

Then if he comes back and says "we tried it, and it didn't work", THEN we can pursue the possibility that the machine doesn't have the ROMs installed.

>.. not quoting...

Looking back at the subject line, I guess I should have quoted a little from the original message... usually when the subject is self-explanatory, or the original message is a single question from one individual though, I usually don't bother to quote much if anything since the original poster should remember what his question was about.

(Many times too, I'll be logged in with a dumb terminal that has no editing or quoting facility, or even any "scroll-back" buffer, so it's more than just conserving bandwith sometimes... :)

I believe the "General Purpose Output" pin on the ST monitor jack
brough out the composite video signal that would normally drive the
RF modulator **on some** models of the ST.

Depending on the model you could use a composite monitor even if there
was no modulator.

James Wood wrote:

] Once again, I understand that "how many bits" a system is is not
] necessarily useful information. However, what about the Pentium ($900 ...

That's right. There's no point having 64 bit registers and a 64 bit
address bus if your maximum (or most often used) data size is 32 bits (which
many C compilers are). It may speed things up a bit, but it won't double
performance by any means. If the applications are written to make use of the
wider processor, than that will help.

] What about the p6? Is this the *END* of the Intel regime? Surely the
] 8086 will RIP after that. What then? Time to sell the Intel stock as
] soon as the p6 comes out and gains a little popularity?

From what I gather (from reading Electronics Times and Electronics
Weekly) the head of the x86 design team reckons he can squeeze enough out of
the architecture to make a P7 worthwhile. However, in other articles, it seems
Intel's marketing dept are more interested in the VLIW (Very Long Instruction
Word) architecture jointly developed with Hewlett Packard (who, BTW are in on
the PREP architecture PowerPC based consortium also -- hedging their bets I
suppose).
Of course, if Intel do go the VLIW way, if the processor cannot run x86
code, Intel will suffer from what every other microprocessor manufacturer has
been suffering from for the last 15 years - market-place resistance to a new
architecture. They had better make sure the VLIW processor can emulate x86 code
faster than a P6 and a PowerPC, or they'll be in trouble.

It'll certainly be interesting.

WHAT ????? I heard that the organizers of CeBIT said Atari had booked space,
bigger than before (when the ST was big) and many people here have been saying
so too. I thought it would make sense, that they would release their 'bomb'
at this show. Was it just more bullshit that sounds ideal but would never
happen because it's Atari ? Don't get me wrong, I'm a real Atari addict and
it hurts to see them always just missing the mark or not putting their hearts
behind all their great ideas.

This is question for any artists/graphic designers out there(here?) I want more colour to add to my graphics capabilities so I am going to a Falcon or TT. The question is, the only good program I've heard of is da's repro, and it sounds good, but is that it? Does anyone know of good-excellent professional graphic programs along the lines of image creating and manipulation that would work on the Falcon or TT(and possibly on the STe - usable until I get my new machine). What are you graphic artists on the TT/Falcon using? Concurrently, could anyone reccomend the better machine for image processing - the TT or Falcon, with or without video cards - and what video cards(Crazy dots, Cyrel,...?) Thanks for any help.

The publisher is (*was*) Lee H Pappas. I think it's not on sale anymore, but in sept -89 the price was U.S.A. $3.95 .

I picked at random one issue and found:

A front cower showing a cool swedish looking girl in a cool white dress walking out of an Atari-branded monitor with an early 520ST in her hand..

Inside I found these articles:

The Ultimate Screen Saver (fireworks..), listings in assembly.
C-manship part two (How to build a GEM-application in C..), listings in C.
PD Parade.
The ST Gameshelf.
The Animation Stand part six (Professional animation by Maurice Molyneaux).
Software Engineering (!!!)
Atari at Disneyland (Don't remember reading this).
Book reviews, hardware news, commercial software, editorials, and more...

/Jens M Andreasen

P.S. What means "c.198x" ??

: >
: >At the end of the day, the Atari computer platform can only survive if
: >people upgrade their machines either to a Falcon, Medusa etc or
: >modify their ST to make it super fast. You simply cannot expect programmers
: >to squeeze huge amounts out of the same old hardware indefinately.

: This is true, but bear in mind that no computer has been programmed right
: to the bare limits of its hardware since the ZX81 - anyone remember 1K Chess,
: or High-Rez Invaders (256*200) with sound on a machine with only character
: graphics and no sound subsystem at all? There is a lot of stuff that can
: be done with an ST that generally isn't, such as the switched palette
: & full screen overscan tricks that we all know are possible, but seldom
: see outside of a couple of 'gee-wizz ma, look what I can do' demos.

This is indeed true, but as we all know the ST as it stands may offer
a nice entry level machine for *simple* comms, dtp, graphics etc.
It is true that it is probably under used, but lets face it when you see
an Amiga 1200 or PC screen shot of some new peice of software it does
look so much nicer. Having said that the range of expansions, GUI's,
operating systems, accelerators, perhaps gives the ST a long life, but
the problem is they focus on machines ALREADY sold. In in themselves
they do not sell more ST's! The only way Atari or any one else for that
matter, will move back into the TOS scene is if sales increase NOT
decrease. And how does this happen? Well the buyer has to buy the
new machine. A company can only develop a range of machines if the
sales from its current models are enough! Simple economics really,
all I'm saying is that people who own ST's should INVEST in the
new models whether they be from Atari, C-Lab etc, its doesn't matter,
but this is the only way NEW TOS based equipment will emerge.

My own view is that a new proper 32 bit Falcon should be designed,
with all the Falcons current mod-cons but also with 32 mhz. Add to
this built in Magic and an improved version of GEM, then you'd be on
to a winner. Its no good saying that the Falcon at 16mhz is
faster than a 33mhz 486, the harsh reality is that the 'naive'
buying public only looks a raw numbers and hence even if the
price is the same is likely to fall for the 33mhz 486. Its a shame
but Atari did really screw up!

: >However I do agree, perhaps a bit less Falcon stuff would be better, and
: >bear in mind I am a Falcon owner!

: As am I.....

Well that makes two :-)

In a previous article, raver909@telerama.lm.com (Joe LeSesne) wrote:

>Ok. I am looking to buy an external Syquest 270 Removable media drive
>What is the cheapest price for one of these and where from?

APS is currently advertising them for $479 for an external unit with case
and power supply, all cables and one cartridge. Buy yourself a Computer
Shopper magazine and start calling all the 800 numbers of drive vendors
and you might beat this price by a small margin, but it's the quality
of the external case that counts since the mechanisms are all the same.

>Also does anyone have the address for APS technologies?

Sure. I highly recommend them, too.

APS Technologies
6131 Deramus
Kansas City, MO 64120
800-677-3294

But you should also call Toad Computers at 800-448-TOAD and give them
a chance, as well. We need to support our few remaining Atari dealers.

There is an easy way to use internal devices with the Falcon, although you cannot have them inside the Falcon. I use a separate mini-tower case to hold my SCSI devices--you can pack in whatever you wish: HD, CD-ROM, tape backup, etc.. You only have 1 cable running to the tower case (SCSI cable), and of course the tower case has an internal power supply for all devices.

In a previous article, gs01tph@panther.Gsu.EDU (Tommi Pekka Hietavuo) wrote:

>I have always wondered what is it in Macs that makes them so "great"...
>Because they aren't that.

You should probably add an 'IMHO' to that, Tommi. Others may disagree.

>Right yesterday I nearly lost my nerves trying to get PageMaker print out
>what I asked it to print. No way.

Hmmm. With so little info it's hard to guess what the problem was. But your implication is that PageMaker doesn't work well on a Mac. A ridiculous assertion, of course, as most of the publishing bureaus across the country will attest. Perhaps the Mac you were using had too little RAM; perhaps you did not have 'fractional character widths' turned ON under Page Setup; or most likely... perhaps you just don't know how to use a Mac or PageMaker.

>Postscript has its good points, but too often it really is NOT WYSIWYG.

Like _any_ page description language, it will _only_ be WYSIWYG if the hardware it is used on is appropriate and has been set up properly. I use PM 5.0 on my Macs with nary a complaint such as you suggest.

>Mac users don't even notice the problem? No, because they have got used
>to proof-prints - and they have never used a DTP program that is
>absolutely accurate

Oh, please... that's a _truly_ ridiculous assertion.

>The more I use PC- and Mac-programs, the more I have to honor the
>Calamus' programmers.

No argument there. Calamus SL is an outstanding piece of work and is superior in several areas to what is offered in PageMaker and Quark XPress, IMHO. (<-- kindly note the IMHO, folks.) :)

>You can magnify a Calamus document e.g. 1000% - and see EXACTLY what will
>be on the paper or film.

Of course, PageMaker and Quark XPress support this too (even though I freely admit that I personally prefer the Calamus SL interface better).

>I can always tell my Falcon: "hey, now I need a bigger high-density
>floppy, so make me one!" - and it will format me a perfect 1.7 Mb floppy
>that works just as well as the 1.44 ones. Well, try that with Mac!

Can you format a 1.7Mb floppy on your Falcon using only TOS, without help from any 3rd party disk utilities? If so, cool. I didn't know that. You can't do that on a box-stock Mac. You CAN with 3rd party utilities.

>The keyboard of the Mac I mostly use, Centris 660AV, is - to put it
>mildly - awful. Even Falcon's own keyboard, though far from perfect, is
>better.

Keyboards are like shoes... VERY personal. And exactly WHICH keyboard
are you using on that AV? Apple standard? Apple Extended? Apple Extended
II? Apple Design? Apple Ergonomic? Or one of the countless aftermarkets?
I like my Falcon's keyboard... but PERSONALLY, it doesn't come close in
comfort and functionality of the Apple Extended II keyboard I use on both
my 660av and PowerMac 7100. That's just me... your mileage may differ. To
be fair, you should state a similar caveat in your conclusions.

>The mouse doesn't feel good either.

Again, to YOU. For me, the Mac's ADB mouse has much better feel & control
and it fits my hand better (an ergonomic design which works, this time)
than does the stock Atari mouse. The LogiTech mouse ain't too bad, though.

>And after using resolutions like 800x600 on Falcon, the 640x480 doesn't
>impress.

I would imagine so. After all, 640x480 is the _standard_ (lowest) screen
resolution of all color Macs (except the Classic and some Powerbooks).
It's like the 320x200 resolution on our old ST machines. Not very high tech.
The next step up, 832x624, is much more comfortable (I use it on a 15")
and 1024x768 is even nicer (on a 17"). 16-bit color (32,000 simultaneous
colors) is standard w/these resolutions with plain old on-board video.

>You can say I have prejudices towards Macs - I can't prove you wrong.

No kidding. Gee, we never would have guessed. :)

>No computer I have used since 1986 has felt better in my hands than Atari
>does. Calamus is a tool without competition: it's in its own class.

I won't argue with EITHER of those claims. But it ain't 1986 anymore.

>Think about that, before buying a brand new Pentium or Power Mac. You
>will certainly get powerful hardware - but what's the use of it if you
>don't _like_ using it..?

Valid point. But I contend it's your familiarity and degree of comfort
with the 'Atari way of doing things' that is the problem here, not the
PC or Mac itself. There is a learning curve associated with learning how
to proficiently operate any new computer and we Atarians (like most) will
naturally resist and resent this learning process. We might not like it
to begin with, but once you _understand_ how a system works and how to
make it work for YOU, your attitude will likely change. Mine did.

>Atari has that special touch the others still lack.

That's for sure. But unfortunately, that 'touch' doesn't sell computers.
But give me a MagiCMac version that will run most of the Atari software
that I'm interested in on a PowerPC-based Mac, and I'll be quite happy. :)

Please understand... I am NOT Atari bashing. Far from it as I as much as anyone love these little wonder boxes of ours. I wish Atari would decide to manufacture new and improved units, but I doubt the likelihood of that ever happening and I'm not going to sit around waiting for them. The F030 is still a neat box but it's based on 80's technology. And it's 1995 now.

The Macintosh may not be the ideal platform for Atarians to migrate to (if they decide they need to migrate at all), but I do believe it is a much more logical choice and makes for an easier (and eventually, happier) transition than going the PC route. Again, that is only MY personal opinion and many others will disagree and that's perfectly OK.

But I strongly object to anyone who tries to represent their personal opinions and half-truths as FACTS when they are only based on conjecture, ignorance, and/or unfamiliarity.

So I guess BobR and I are alike in that respect. <shudder> ;-)

Most decent quality VGA monitors should work - my roomate's Orchestra 15"
monitor works with all TT rezs (except TTHi of course). I have a Moniterm
VY1000 mono 19" monitor which I got at a surplus store for $50 and it works
wonderfully with TT Hi - I only had to make a cable. The VY1000 was shipped
as part of the BELL WORKSTATION GRAPHICS ENGINE packages for Unix boxes.
Since you work at BNR I'm sure they must have a few of these old monitors
lying around (collecting dust). Grab one if you can!

Apparently Motorola (or someone else) is making a 68040 that's pin compatible
with an 030. This is just what I heard.
>
> >4. FPU support?
You TT will have a 68882 built in. There is not a hell of a lot if FPU
support in ATari software. I am using Xwindows a lot under mint these
days and all the stuff I have compiled (like Xv and, well everything really)
I have compiled to use the FPU. If you want to run your TT as an X machine
you will have plenty of FPU support. Then there is Linux which requires
an FPU. If you have TThi rez then running X is a joy!

>I'm sure you will be like me and love your TT it is really a great machine. You
>can expand it in many ways and at present I need to buy another machine but
>can't decide between a PowerMAC or Pentium so I think I will wait till the new
>PowerPC CHRP compliant units ship so I can run whatever software and OS I like
>to use or for that matter need to run the software I use.
He's right. Using my TT is a joy. I look at Pcs (and I have to use them
at work) and they really are a pain to use. Macs as well tend to get
on my nerves (although I do have a Spectre - they are very slow - even with
68040's - the OS is far too inefficient.) Running a TT with Genea/NeoDesk/
copying TT ROM to TTRAM and having a 48 MHz upgrade is UNBELIEVABLY fast.
The reason for this is that all the software is wriiten to run at a
reasonable speed on an 8Mhz ST. Everything flies on a 48MHz TT.

Troy, you should really go to the TAF show on April 1 and 2 in TO. All the
big developers will be there - you will find a lot of stuff for your TT and
great prices duriong the show. Cyrel will be there and I suspect they'll
have their TT-RAM boards ready by then - TT RAM is a must.

Source record: 169268

>To my experience ANY IDE device will work but the 2.5" are hard to find
>and expensive!

Any properly behaving IDE drive will work - I experienced some older Conner drives have firmware bugs and don't work (CP2024), some Western Digital drives are not suitable, Toshiba MK2xxx drives don't work reliably (timing problems).

Here are some popular 2,5" IDE drives that I've personally seen at work in Atari Falcon030 (those marked * were used by Atari themselves):

- Conner 2064*, 2084*, CFN250
- Quantum GoDrive 40, 80, 170*
- Toshiba MK1724*
- Seagate 9077A*, 9080A*

2,5" IDE drives aren't that hard to get - and up to about 350 MB, they are reasonably priced, too.

bye, Peter

>This information comes from the "520ST Owner's Manual" - page 75,
>appendix D.

As for the pinout: No speculations coming up - just facts.
The pinout in the original post is the EARLYEST pinout, as used in the very
first batch of ST machines back in 1985.

>Don't know what "Reserved" and "General Purpose Output" are. Any
>speculation?

The GPO is just a normal output line coming from the soundchip. It can be
switched by software; some monitor switchboxes used it for auto-switching
between color and mono monitors.

Here's the revised pinout, adding later machines' changes:

>1- Audio Out

(unchanged) STEs have a mono signal here, being a mixdown of the Stereo DMA
sound and the mono "classic ST" sound.

>2- Reserved

From 1986 onward, normal ST, STF and Mega ST machines have "Composite Sync"
here; STM, STFM and STE have "Composite Video", also useable as Composite Sync
for RGB monitors or TV sets with RGB input.

>3- GPO

ST: (see above)
STE: No output here, but "External Sync Select", an input line used for

synchronizing the video hardware with a Genlock interface.

>4- Monochrome Detect

STE: Mono Detect/Sync in - when "External Sync Select" is active (on color monitor only!), the external Genlock device may feed its clock in here.

>5- Audio In
>6- Green
>7- Red

All unchanged on later machines.

>8- Ground

From 1986 on, all machines have +12V through a resistor here, used for mode switching on TV sets with RGB input.

>9- Horizontal Sync
>10- Blue
>11- Monochrome
>12- Vertical Sync
>13- Ground

All unchanged on later machines.

Falcon030 with the "ST monitor adaptor" attached have the STE pinout there.

bye, Peter

Hi,

Is anyone using the ME2 Editor? If you are maybe you can help.
Is there a library of MUTT files available for ftp, in addition to
those that are included in the distribution? I haven't tried any sites
for platforms other than the ST yet so any help would save me some time.

Thanks in advance.

Nick.

Well, I've been to the CeBIT, but I didn't really look around for
Atari, because I didn't expect them to be there anyway. But I didn't
see them by chance, though. MagicMac was demonstrated at Apple's,
which was quite fine to look at, but Atari wasn't anywhere, at least
in none of the 21 halls I visited.

4530. Re: Mint Minix Confusion

Newsgroup: comp.sys.atari.st
Date: 1995-03-15 19:23:37 UTC
From: sm001pe@unidui.uni-duisburg.de
Message-ID: <3k7erp$qfg@h20-hrze.uni-duisburg.de>
Source record: 169280

Randell Spreadborogh (zap@eskimo.com) wrote:
: I guess I am a bit dense but what is the difference between mint and
: minix? I see posts from people setting up minix partitions and are running
: mint but I don't understand.

Yes, there is a great difference !

MiNT is the kernel (preemptive ! ... Mac OS is only cooperative !!)

Minix XFS is the filesystem. It allows V2 filesystems (like under Linux)
and long filenames (max. 162 characters per file or folder)

Minix.XFS needs MiNT to run.

Do I need both mint and minix or will they run
: by themselves?

Yes, you do !

MiNT should be in the auto folder as last program !!!

Minix.xfs should be in c:\

How to install Minix XFS !

1) minit.ttp -P -V -n 8 d:
-P means protected against starting without minix.xfs
e.g. if you rename it to minix.xf

-V means V2 filesystem

-n 8 means : (16*n) -2

n=1 -> 16-2 = 14 (doesn't makes sense !!!)
n=2 -> 32-2 = 30 (possible, but too short !!)
n=4 -> 64-2 = 62 (useful)
n=8 -> 128-2 = 126 (works, but not needed...)

2) mfsconf.ttp d:
3) fsck.ttp -S d:
4) csize.ttp minix.xfs 64 64 64
install 3 * 64 = 192 KB cache for system, user & inode cache !!!
Don't init c:\, because IT'S NEEDED TO BOOT !!!

I would like to emulate a linux system and use a bourne shell
: preferably bash as that is what I use as a host. What do I need to
: accomplish this task? I have a STE w/4 megs tos 1.06 and a small hd. I just
: installed geneva and neodesk4 and noticed a prompt in neodesk regarding
: mint. I am still getting familiar with the package. Any help and information

: would be appreciated.

Gemini 1.a and Thing 0.24 support long filenames !!!
Neodesk I'm not sure...

: On an unrelated note, I was browsing system information and found I was
: running GemDos ver 0.15 and Gem ver 4. That is the first time I was aware of
: those particular items. Do those version numbers change within certain tos
: groups or do they simply change with the new tos version? Just curious...

AES 4.x is part of MuliTOS ! (It's selled by COMPO) MultiTOS allows to start
GEM tasks parallel !!!
MiNT allows only TOS tasks to be started parallel !!

MiNT + MultiAES = MultiTOS

MiNT is free available !

MiNT 1.12 or MiNT 1.12 MH2 is the latest release !
MultiAES is part of the MUltiTOS package of COMPO !
(the file which contains MultiAES is called GEM.SYS)

Best regards, Filipe :)

If you have any questions left, feel free to ask me...

Bye.

Source record: 169281

Hi!

I am a total newbie to all this MiNT stuff and I wondered if anyone could help me. I have just installed all the 9 disks from the Distribution disk from one of the ftp sites (hensa, I think). Anyway, this has installed ok and I can now do most of the commands I use for unix (cd, less, chmod, etc). What I want to know is how to use accs with mint? I put some accs on the root of C:\ but only Toswin loads up. I use a program called ACC.PRG to load all my accs from a folder. I have this running before Mint, and the message comes up a boot that ACC.PRG has loaded, then Mint loads, but the I get the message 'Leaving Mint'. What do I have to do to get my accs loaded?

Any other things I should do to make Mint better, or anything I should try out (remember I'm a total newbie), could you please tell me?

Thanks.

Andy

4537. Xdvi for Mint-X

Newsgroup: comp.sys.atari.st
Date: 1995-03-15 19:56:02 UTC
From: sasmesba@kingcong.uwaterloo.ca
Message-ID: <D5HzDF.G1L@watserv3.uwaterloo.ca>
Source record: 169287

Hello all,

I'm sorry I haven't posted all this great new Mint-X stuff yet, I've been
out of town for a few days (although I could still read my e-mail when
I was away as those of you who sent e-mail have probably guessed). Anyway
I will try and upload Xdvi today (3 versions TT,Falcon(nofpu),ST) to
phlem.ph.kcl.ac.uk. As for the other software I would like to do a few
more fixes before I upload them. I will be away again for a few days
so the earliest time the other software will be uploaded is sometime next week.

Sorry about the delay but I am a full-time grad student and part-time
consultant and the consulting side of it a going to take up a lot of time
for the next few weeks.

Xdvi should be useful to a lot of people because I would assume that
most Mint-X users would already have a latex steup on their atari. That
port is very stable, ie I haven't found any bugs yet. It is also relatively
small so it shouldn't take too much time to recompile the other versions.

And mine states clearly: GROUP III Fax. AFAIK this means it can talk to
(nearly) all 'normal' Faxes - Group IV is for digital systems. The
'Class' system is for computer software interface.

BTW Class 2.0 is not the same as Class 2, although I've no idea what the
differences are. Class 2.0 is the official ANSI/EIA/TIA standard, class
2 was (is) the attempts proir to the official standard.

Wasn't it you who was trying to parallel the PC's disadvantages of (1) CONFIG files, (2) IRQ conflicts (potential), (3) segmented memory juggling - to equivalent "problems" that YOU find with the ST? Is that not a comparison between your modern PC and an ST?

> A network card, a sound card and a SVGA card can just as easily be
> installed in an IBM XT as they can in a 1995 Pentium system..

That would not be realistic, and once again, I point that your arguement is specious. Most SVGA cards have been 16-bit from the beginning. The IBM XT only has 8-bit slots. Some of the early VGA cards could operate in either, but now most are in fact 32-bit with Vesa Local Bus or PCI. Try putting one of those in your XT.

If the SVGA card would even work in the 4.77Mhz machine with 8-bit bus, Windows would be so sluggish it would be laughable....if that wasn't true, then why do people clamor for 100Mhz PCI Pentiums for Windows?

A sound card (8-bit, as most 16-bits have 16-bit connectors) would go in there. However, games would be very slow regardless of the card, so why would you waste your time?

Furthermore, the combined values of a VGA card and monitor (have to get one of those too) and sound card would be wasted on the 8088 system - probably be worth more than the computer itself.

>
> Who said anything about comparing a "modern PC" to the ST..?

Heh heh heh. Play the innocent one, now, whydontcha? That's been the arguement all along here.... Perhaps your emotional burst into name-calling caused your faulty memory to let you down once again.

James

4551. I need help with IRC & FLASH

Newsgroup: comp.sys.atari.st
Date: 1995-03-15 20:36:40 UTC
From: gripman@netcom.com
Message-ID: <gripmanD5I194.4t8@netcom.com>
Source record: 169299

Hi Yall,
I am going to try this once again. I have been lurking on the Net
for a while now and it's been a real time suck (but lots of fun too).
I have a unix shell dial-up account with Netcom in S.F.. I am using
a 520ST w/ 4 Meg & HD, Flash & Shadow. I recently tried out IRC and it's
been kind of confusing but interesting. The problem I've got is that when
I capture my IRC sessions to the capture buffer I get about 2 1/2 screens
of blank space between each line of characters. This is a lot of wasted
space when I save to disk.
Does anybody have any ideas about how I can correct this? Any help
will be greatly appreciated.
Also does any body know if there is a graphical user interface that
I can use with my set up? I have been surfing the Web using Lynx and
there's a lot of neat stuff out there but I am limited to text only. I
would really like to access some those graphics too.
Thanks in advance for any help you can give me. Please try to keep
any responses simple enough for a non-technophile can understand. I have
been using Ataris since I got the 2600 VCS (then the 800, 130XE, 520ST 1/2
Meg, 520ST 1Meg, 520ST 4Meg, Mega STe [my latest purchase]) but I have no
programming experience. My main interest has always been playing video
games so I am basically a plug in & play user.
I hope I get this message to post this time.
Thanks again.

Jim Cochran

4552. LOST ALL HD DATA! HELP!!!

Newsgroup: comp.sys.atari.st
Date: 1995-03-15 20:56:31 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <03151995.205631@empyr.dircon.co.uk>
Source record: 169300

Hi.

Erm...

I've managed a VERY stupid thing. I've lost all the partition info on my HD. (Don't ask me how, *I'm* not even sure, but it was something to do with running a disk based TOS 1.0 with a very old version of the ICD driver software, several bombs and lots of tears) The data is there, but I can't get at it. I have an ICD AdSCSI+ host adaptor and a Rodime RO3000T 105Mb SCSI drive.

My HD will not boot any more. I tried ICDFMT.PRG and restored the partition info, which resulted in something very weird... All my data that used to be on Partition D: appeared on C:, E on D, F on E etc etc, everything was one partition out, and the contents of my old partition C: was nowhere to be found. I know the partition info was correct, as I used the default settings, which is what I used when I originally formatted the drive.

Running HDPARTS.PRG to check the partition info, it reported that Partition C: had the start and end sector numbers of what used to be my Partition D:, and so on through to part. I. I tried ICDFMT again, and part. C:'s sector info was correct, i.e. sectors 2 thru 9676 (or something like that), I re-wrote the part. data again, but the same thing happened, everything was one drive out.

Running ICDFMT several times, it was obvious that it wasn't writing the partition data correctly, as I call my C: drive 'BOOT.C' and each time I ran ICDFMT, this field was empty, despite entering it and writing the part. info several times previously. No matter what I did, it insisted on making part. C start at sector 9677, which is where the data for my old part D: is. I could _not_ get it to start any damn partition at sector 2, to recover my drive C: data. Each time I got ICDFMT to write the correct part. data (i.e. with part. C: starting at sector 2), HDPARTS.PRG would then report that part. C: started at sector 9677.

I then did a silly thing.... I got ICDFMT to write a totally new set of part. data, different to my original settings, in the hope that this would 'clear' the problem of it not writing the correct data. I then got ICDFMT to write the correct part. info, hoping that it would 'stick' this time. It told me that the drive was 'not ICD formatted'. I *did* have cleanup.prg, but again, stupidly I kept it on my hard drive, and have long lost the original floppy. Neither did I keep a backup of my data. Yes I know. Don't say it !
(Come on, everyone falls into that trap _once_ in their lives ;-))
You never get into the habit of keeping regular backups _until_ you've experienced a major data loss.

What can I do, apart from cry ? Is there any way to get the correct partition info onto the drive ? I tried every version of ICDFMT I have.

Please help ! I am in danger of losing my sanity, not to mention over 85Mb of data !

Thanks x 10E47

Kev.

Hi !

I'm desperatly looking for a programm that would allow me to make
PPP connections with my STe (2 Mo). Trouble is I have no Mint or Minix
or Linux installed and never will do so. I have found NOS but find
would like to find something like a real GEM program. The only
one I found required hardware like a ethernet card.
So ? It is really a that hard challenge ?
Is it really impossible to find a good GEM program for PPP connections,
including at least FTP and TELNET clients ? I know lots of
people here that woul be really happy to find that...
Please help me !!!

RM> Amiga for your #549 you get a built in IDE HD drive.

You obviously have a very loose grasp of mass-marketing. In order to get low prices, you need high-quantity sales. If you have a computer product that says "Atari" anywhere on the case, you simply aren't going to get high-quantity sales - people are STUPID and would rather buy a sewing-machine controller dressed up with an "Intel Inside" sticker. The reason IBM clones are so cheap is that EVERYONE makes them - especially Taiwan and Korea. And they sell millions of them because they all ride the coattails of IBM's marketing division.

I guarantee that if IBM were to introduce a Falcon clone tomorrow and market it as aggressively as they did the original PC, it would be available in a year or so for 1/2 the price. But that isn't going to happen. We have to live with the reality - 85% of everything is crap, including people. Especially people, actually.

4559. Will any of these monitors work?

Newsgroup: comp.sys.atari.st
Date: 1995-03-15 22:29:35 UTC
From: troyc@bnr.ca
Message-ID: <3k7pof$h5p@batph8.bnr.ca>
Source record: 169153

So a response to my earlier post keyed me off to look around the company
here for surplus monitors to hook to my TT. I have uncovered these three:

HP98774A - Mono
HP98754A - Color
HP98788A - Mono

Now, my support division will be calling HP for me to get the technical specs
on these monitors like H & V scan rates. I wanted to post these now to
see if anyone offhand know anything about these monitors and if they can be
used with a TT, especially TT High.

I want to be sure because it is not that easy to get the company to release
eqpuipment as an asset and sell the monitor to me. Don't want to go through
the trouble unless it will work.

Responses received via e-mail will be summarized here if necessary since
others may be interested.

Thanks,

It was none other than N.Jones-Rodway who did write on 08 Mar 95 that ....
>> edit and convert GIF, TIF, JPG, etc. files) for the Falcon, commercial
>> or shareware?
NJ> Well, Apex Media can handle quite a few differnrt formats, though
NJ> not quite as many as you're after (And I guess it's a little
NJ> expensive for what you're after!).

It can handle the 3 specifically mentioned though (As well as a some others),
yes it is 'expensive' in Atari terms but there is just no equal available for
the Falcon and has many other tools up its sleeve inc. Animation and Morphing
.The best thing about Apex though is that it is really SO MUCH FUN to playu
with and fast with it !

NJ> For pure conversion, you could try the Shareware GemView or the
NJ> Commercial ImageCopy 3.5 (about 30 UKP)... they both do an excellent
NJ> job and they both handle a huge range of formats...

Yep and with either of these you can transfer all file formats to GIF,JPG to
use with apex.

NJ> Or, of course, you could try TruePaint from HiSoft (about 40 UKP) -
NJ> that has a lot of import and export modules, as well as being a Paint
NJ> Package (though nowhere near as good as Apex - I even prefered using
NJ> Degas Elite on the ST than TruePaint!!).

Tpaint is cheap but rather slow and really limited IMHO and not short of a few
bugs as well. True Image was better but hey talk about MEmory intestive :-(
There is nowhere near the joy to use factor that makes Apex the best so far ...
DA picture and Chagal aint bad but are more useful for
manipulation than editing IYKWIM.

Mike try XoR, it works very well, The problem with MIDEX is that you
need to run a completely "dry" system for it to work, No autos or accs.
It does work! The older versions are buggy though, V 1.63 is the last
one. Earlier versions did not let you get long messages like most modern
synths send.
Rich

4584. Re: New Atari Computer Rumour!

Newsgroup: comp.sys.atari.st
Date: 1995-03-16 07:37:02 UTC
From: Spencer.Davies@mettav.exnet.com
Message-ID: <795407224.2@mettav.exnet>
Source record: 169170

Out of the ether, the following was mentioned by Gerry...:

GO> O.K , but if you need a MC68000 for your atari, you have to try
GO> distributers & stockists;watch the price jump up after a few years.
So start buying up old stocks now! Far better than gold.

GO> I have seen this happen to old Texas CPU's (TMS9909,anyone), used to
GO> cost around £12, now selling (when you can get them) for £79.
But if things started to get really desperate then surely things such as PAK
and others would take off. Also as people move from ST's to higher end Atari's
(ok, some hope I know!) this will free up old ST's.

GO> In reality, the MC68000 should be alright for a long time.
Yep, for various reasons some of which are mentioned above.

GO> While we are on the subject, why is there such a high price on
GO> Atari custom chips (DMA,Shifter,Glue,etc)? Some of these are
GO> advertised in the UK from £20 upwards. A fully populated Motherboard
GO> (STFM) can be got for around £49.
Economies of scale? If you want to repair your ultra upped ST what do you do?
Pay 20 Ukp for a part or 50 ukp for a new machine which will then have to have
any of your hacks and upgrades done to!

I wasted so much money on my STFM keeping it working just because it would have
cost more to get another one and have all of my upgrades re-done to it. I
finally saw sense when my host adapter went wrong again destroying the hard
disk and upgraded to a Falcon.

Well.... I've sort-of saved a game..... I saved it (without any error messages)
but when I tried to load them they refused to load. HDX says that the
"clusters are bad", but its only happening on files saved by towers.

I also have 4-meg, and did not get the mem. problem (even when booting
with accs / MiNT !!)

Dunno....

Message-ID: <3k962tavh1@mhade.production.compuserve.com>
Source record: 169180

>What Atari needs is a good kick up the arse...

Why would Atari buy exhibit space at a *computer show* when they
have no computers to show or sell...?

(I'm assuming the CeBit show is for computers only.. at least that's
all I've ever read about being there, not "consumer electronic goods"
in general.)

True, there have been lots of rumors about "new" Atari computers, but
unless there's truly something to them, there's no reason for Atari
to attend computer shows any more.

Thx a lot, but the software is the easy part (in my mind) and the problem
could be with the server hardware. Could it be a LAN adapter for
oridinary PC (are they expensive?), or may be I can connect my F030 to
any big system (DEC/SUN/HP/MC...) via Falcon LAN?

regards,

Simon.

4594. DA's Layout Users!!!!!

Newsgroup: comp.sys.atari.st
Date: 1995-03-16 11:38:26 UTC
From: mtaylor@perth.DIALix.oz.au
Message-ID: <3k97vi$hc3$1@perth.DIALix.oz.au>
Source record: 169185

Come on people there surely must be someone out there that uses this program. Is the Internet Atari users only limited to technophiles or what? I really wonder how many Atari users are actually on the Net as most of the traffic seems to be from the same old people. I mean Roger Sheppard and Roger Sheppard flaming seem to make up 70% of the articles. Is there anyone else out there that uses the machine in a serious way. I'd like to see more interchange of information on the Net as it is, as I am sure most will agree, very difficult to get any. I personally find that many software and hardware vendors do not bother to reply to E-Mail or faxes for that matter. Its no wonder the market is shrinking rapidly. Lets banter around some names of good dealers and lets also advise of the BAD ones so that many of us can benefit from others often unfortunate dealings. I'd also be interested to see what machines Net users are using. Anyone got any ideas how we could do a Poll for this as it might surprise us all.

Well people it is up to you. Ignore the platform or do something constructive to help others and who knows you may also gain from this as well. Perhaps many Atari Net users cannot use the Mailers, FTP sites etc. and are daunted at having to ask other platform users who as many of us well know may snub the individual for using an Atari. Computers my friends are merely a tool. Some are maybe better than others as the software may work better in the given situation. Generally if the machine and the software can produce what you want then hey it still does the job. Expand what you have, as I have done, and often your productivity can be increased many fold. The DREAM COMPUTER is alwasy going to be around the corner. Do yourself a favour and realise that it doesn't matter how fast the processor is if the software doesn't work well or you use floppies or a slow hard drive then its not going to work all that well.

I'm a user of computers. I use them to create artwork for printing and I can honestly say that I am very happy with my TT. However I am not so happy with the software avaialble and the general lack lustre performance of the software suppliers. But as I said before if the machine produces what you want then hey stick with it.

Well I look forward to a flood of productive and perhaps stimulating response and hope that my message might stimulate some form of forum for further discussions.

Regards to all from OZ
Mark

4595. Re: tos error #35?

Newsgroup: comp.sys.atari.st
Date: 1995-03-16 11:51:28 UTC
From: BobR <76702.1466@CompuServe.COM>
Message-ID: <3k98o0avh2@mhade.production.compuserve.com>
Source record: 169182

TOS Error #35 means that a file that has been loaded can't be run.

It can result from corruption of a genuine program file, that is, from bad data loaded from a floppy or hard disk.

More likely though it's the result of trying to RUN a file that is NOT a "runnable" program.

The most common cause is trying to run a program that has been compressed with an archiving program like ARC, ZIP or LZH.

If a file is downloaded from a BBS or ftp'd it is most likely compressed, and needs to be uncompressed with the appropriate utility before it can be run. Simply renaming a file with say an .LZH filename extender to an extender of .PRG and trying to run it will result in TOS Error #35.

The best way to avoid this problem is to ALWAYS download files with exactly the same name they're listed with on a BBS or online service so that the filename extenders are preserved. This will indicate whether or not a file is "runnable", and if not, what compression utility needs to be run on the file before it can be used.

There are lists of the other TOS errors, mostly in techincal books like the Abacus ST series and the Atari technical documentation, but those errors are very unlikely to be seen. TOS Error #35 is the most common.

**** TOWERS II PATCH NOTE ****

Just before the release of Towers II, We had a minor bug fix. While fixing this bug, we accidentally introduced a major one. After uploading to all the boards, we did another test run. We found that on the upper levels, the save file would corrupt. We also found from other sources that ICD boot up programs didn't like Towers II. We fixed all these problems with this patch program. If you are playing with Towers II V1.0, you MUST run the patch program. This will update it to V1.1. We have re-uploaded the corrected version of Tower II and have asked the system administrators to change out the versions.

We here at JV Enterprises sincerely apologize for any inconviences this may have caused and hope that you will continue to play and enjoy Towers II.

JG>I have been reading all the hoopla re: how great TOAD is... and have
JG>called them twice, written by snail mail once and just E-mailed them a
JG>couple of days ago.... ALL to just get a catalog!!! How L-O-N-G have I
JG>been trying to get this "PRECIOUS D*** CATALOG".....

JG>..... would you believe TWO (2)... that's right TWO!!!! years!!!!

JG>Needless to say... I am NOT impressed!

HMMMMM I got a catalog and the kids took it to the front yard and it was soaked. So the only thing I could read about it was the e-mail address so within a couple weeks they had me another catalog. And it seems I have managed to loose that and my BRE catalog too.

I promised to bring in my TOAD and let him know some potential repair coasts. But I brought the BRE instead, got an e-mail as I promised to get the address on the message before upload and didn't. So I would up both catalogs at the office.

Now two large shipments of goodies for my St computers arrived and I must have just thrown them in the boxes. So have been reading from eight different Abacus books and going thru the HABBA C compiler, Installing Timeworks Desktop and in general having so many new toys that I can't decide which to play with first.

If I really searched most likely would find them. The BRE catalog took four requests and THREE years to get. So that tops your two year and running wait for a TOAD.

4602. Reading other CD-ROMs

Newsgroup: comp.sys.atari.st
Date: 1995-03-16 14:16:00 UTC
From: gary.ratliff@starnetbbs.com
Message-ID: <9503161915595724@starnetbbs.com>
Source record: 169227

I recently tried to donate the Walnut Creek CP/M CD-ROM to the bbs at which I am a contributing member. And at first they said sure. But later said there was no way to use this as ther were just an enormous amount of file areas and most were in ARC format.

(This is directly on topic as one of Atari's best gifts was to pd the excellent CP/M emulator from Germany fo the ST line of computers).

So I took the CD to my brothers and saw him read it on the brand new CD reader he got for his Amiga 500, the browser will some times read and sometimes not read. while scanning wanted to try and capture some of the collection. This seemed to hang up the Amiga.

As the Toad Catalog lists many Walnut Creek titles, if I purchase the planned CD-drive woudlit be readable and downloadable on an ST (I have 520, 1040 and MEGA from which to choose). This was made for the PC, but we can routinely read pc formatted disks and using PC ditto run PC programs.

I have yet to get hd or cd as the Atari prices like the Amiga prices for hd's and cd readers seem way morexpensive. Hopefully some will have actual hands on experience with this type of hard ware.

From: npetrlik@public.srce.hr
Message-ID: <3k9htm$5bl@nippur.irb.hr>
Source record: 169191

I'm using Papyrus Gold 3.07, and couple a days
ago, I've purchased a printer Espon Stylus 800+ .
With Papyrus, i've got drivers for Epson LQ
compatible printers. Yes, they work with my Stylus,
but print quality is not as expected.
I know that, cause I try (at my friend) with GDOS
printer drivers (there is driver STYLUS.SYS) -
and quality is good. This STYLUS.SYS don't work
with Papyrus (using Papyrus & SpeedoGdos) - papyrus
says something like 'internal error'..
and with other prg's (which support GDOS drivers) -
like Papillon, Xact.. - works !
So, i'm asking You, is there a driver for Stylus,
or maybe for Epson SQ870/1170 (heard this could be good, too) ?
(to be used with Papyrus, off course)

Please, respond via e-mail.

Thank You.

>gribnif@genie.geis.com
Dan: I know you must be busy, and actually this question is open to any
developer, and is: Considering the size of the European(German) market have
you or are you considering translating NeoDesk, Geneva, etc into German?
Just as folks such as R.Sheppard seem to feel that programs he is interested
in should be in English, it is apparent that there are a good number of
German/French/etc programmers who feel that once they've written(read:
transferred their entrails into code) a program they don't want to translate
the whole damn thing.
I feel that if I want a program badly enough, I can figure out how to use it,
translate it, or get it translated. Alternatively, NA distributors of European
programs translate them to English, vice versa for NA programs sold in Europe
I hope. BUT I DO NOT expect a shareware author to spend that extra time
translating a program esp. if no one registers!

Criminy! You think that YOU'RE not happy. Try being one of those software 'suppliers' trying to make a living from Atari software and you'll quickly learn what _real_ unhappiness is. :)

Methinks you should direct your angst towards Sunnyvale, California. Not that it would do any good, mind you, but more properly aimed at least.

Um, generally spaking: NOT.

I dunno the specifics about USRs, but perhaps it was a minor TYPO, only. It should've said 1, 2, 2.0.

The CLASSES describe the level of communication betweeen computer and modem. The GROUPS describe the comms between the modems/faxes. Commonly used are groups 3 (analogue) and 4 (ISDN). There is a nice article in the latest c't about faxcommands and stuff!

>Junior Office - Cutdown of Tele-Office
> The package in the PD will only drive FAX class 2 modems (ie not

Shareware.

And if the mentioned USR supports Class 2. TeleOffice, or JuniorOffice will just work fine.

I have reached the time 10.20am, I have questioned all of the available characters and I have tried everything I can possibly think of!
Has anyone got any hints to help me out of this? How do I feed the cat? Where do I find tools?

All help will be well appreciated. Thanks

4613. Re: crippleware - how crippled?

>make for a better (and bug-free) program.
>

There is nothing wrong in users helping in the development Eric. And as you say, bugs are in both shareware and commecial products.
But try look at it this way:
A guy downloads a shareware program which has been crippled. He pays the fee because this program seems like a good one, and then he finds out it doesn't work the way it was suppose to, (a bug). And now you actualy say this guy should help solving that bug as well by reporting it, which in some cases could lead to exstra costs for him. I know the users most often just pay whatever it takes to make the program work, (i know i do. Lots of my software has cost me damn lot of money in bug reports), but still he pay the fee as well. I would twist this around and say, the author should be more pleased with bug reports, rather than worry about the registration.

But you guy's, (the programmers) don't appreciate anything, (in my opinion). You just collect whatever you can, and when you don't get enough, then you start blaming everybody. (this is said the hard way, and not always my opinion).

Think about it Eric, and start counting how many _beta_ programs you see at our little market. Normally a beta version is at a test mode, but how often don't we see authors asking fee's for a beta version, which in most cases also turns out to be crippled as well, (released as shareware. Pay the fee and become a betatester, if you like).

So now we have a shareware program, which is at beta stage and crippled. I could start mentioning a lot of programs with that definition, but i hope i don't have to, as i believe you are as well informed as me.

This has never been the idea with real shareware, and the change has been made by the programmers only.
If i should start count how much money i've used on bug reports, i could probably pay 100 times the same amount of software paid for commercial

releases. This is probably cause by me doing alot of help for people outside my country, but that doesn't justify the authors act.

You might think it's me beeing stupid using that kind of money on software, (sometimes i tend to agree with you 8-)), but i don't look at myself as beeing a single user doing stuff like this. Thats why your message (and others as well) hurts, as i feel you actually _expect_ us doing like this.

Sorry i can't be of much help to your problem with the STMIDEX program, but
i have another program for you here at my board which is working just fine
together with any Midi devices, (i have an R-8 myself + other stuff).

The program is called DUMPPUMP.LZH

>I know thats the reason. It's just that in my opinion it removes the shareware
>definition. (How come i have a feeling i'm talking to programmers only 8)).

Because most people don't care about it, but programmers have to pick
a label for their product? :)

> I know Dan. Thats not what i'm talking about. You as well as many others
> have probably seen other shareware programs with more than just a disable
> save funktion.

Yes I have. Nine times out of ten I bin them. If I can't see what the
program does I am not going to pay for it. That is, I agree, an abuse of
the shareware label.

>You may be right here, but that doesn't cover for your change of the shareware
>definition. (according to my definition of shareware).

More of a stretching than a changing, I think. :)
And it seems to be a generally accepted stretching, so I guess the
definition of shareware is changing with time.

>>There is nothing stopping you for example using SuperSam simply as a sample
>>player - after all it is only teh save function that is disabled. But doing
>>so - using it without registering - is not true to the shareware
>>idea.
> But you have already made you're quarrentee that people will registre, if
> the want to use it for full. So why care if some people are using it, with
> the limti's, without paying ?

Not quite. The point is that people are still using the profits of my
time and effort without so much as a thank you.

>> There are no rules for shareware either - just a generally accepted idea.
>> And it seems that the general idea accepts crippled shareware as ok.
> Hmm!.. I know i don't count for the general use, but i do not agree 8)

All things change, in time. That is the spice of life. :) True shareware
is unrealistic these days, especially in a shrinking Atari market. How many
people are going to go to the trouble of sending money to another country
when they can use the full package without bothering?

> Any other _feasible_ ideas for registering shareware from other countries?

The easiest way is cash in the post. Its also the riskiest but if it gets through there is no problem.

The second easiest way is to go in to your bank and ask them to make out a draft for you in the destination currency. I have received several registrations this way and can pay them in with no trouble and recieve the full amount. (probably costs a fee)

The third easiest way (assuming inter-europe transfers) is a EuroCheque since these can be paid in with no fee just like a normal cheque. Unfortunately Eurocheque accounts are expensive.

The fourth way :) is IMO - they cost a fee, but the recipient gets all the money.

Fifth and worst is to send a personal cheque in your own currency. This is a horrible choice because it can take months to clear and the bank charge a horrendous fee for cashing it (5 uk pounds here).

These are the ways I have received registrations anyway. If I get any more using the 5th way, I will probably return the cheque uncashed because 5 pounds out of 15 is a big chunk to lose to the bank.

```
The Ultimate Arena (translated documentation)

Note: this is an unofficial, unauthorized translation,
provided only as a service to the non-french speaking
Atari community. If the authors of the ultimate Arena
would like to make arrangements with me to translate
documents or program messages, I would be happy to oblige
them. I can be reached through the Internet at:
ai066@freenet.carleton.ca, in English or French. (The
quality of my written French is not up to the quality of
my English translation!) And now, on to the docs!

Mark Montreuil
==============================================

(c) STeam 94

The Ultimate Arena

Congratulations! You are now the proud owner of one of
the best Atari shareware games, and, certainly, the best
Atari shareware fighting game!

Index:

1. ARENA on the 1040 Ste

2. Registered version of ARENA

3. STeam and you

1. THE ULTIMATE ARENA runs on any Atari STe with 1 or
more megs of ram. To play, simply insert the disk in the
drive and power on your computer. If the screen of your
monitor starts to scroll quickly, power down, boot with
no disk in the drive (or with a disk that will let you
boot clean), insert THE ULTIMATE ARENA disk, open the
auto folder, and delete the program CHANGEHZ.PRG. You
should now be able to power down your computer and reboot
THE ULTIMATE ARENA successfully.

This cut down demo version will only let you play one
round versus a computerized opponent.

A full registered version is available with the payment
of a nominal shareware fee to the author.

2. Registered Version
```

Yes! The game that you are playing is only a playable
demo that is limited. The Registered version includes:

* progressive degrees of difficulty

* your choice of seven fighters

* a two player mode to play versus your friends

* five beautiful different interactive backgrounds

* unedited special "power moves"

* many configureable game options

* full documentation

3. STeam and you

To order the registered version:
Send the following:

Heh. This reminds me of the light rail line that goes through San Jose, and when (circa 1987) they were looking for a name. They originally chose "Santa Clara County Automated Transit" or something like that--which they (trying to sound geeky and hi-tech; this *is* Silicon Valley) billed as "SC^2AT." Of course, the "2" was a superscript, so it really looked more like "SCAT." The name lasted maybe a week amidst a lot of ridicule by the public and the local press. :)

Source record: 169230

>I am looking for some utility that I can download that will help me convert
>GIF and possibly binary picture files to the 1040 STE format.

Actually there is no "1040 STE format"... there ARE a few older Atari graphics file formats that are seldom used these days, including the Degas art program's PI1, PI2, and PI3, the old NeoChrome's .NEO format and Spectrum 512's various formats like .SPC and .SPU...

It sounds like what you're looking for is a way to view GIF files on an STe..?

If that's the case, probably the best Atari viewer program is the ShareWare "GEMview", which should be available from any Atari ftp archive site like atari.archive.umich.edu or any of its mirrors.

GEMview will also convert between file formats if that's truly what you need.

4633. Trouble getting power to ICD Link

Newsgroup: comp.sys.atari.st
Date: 1995-03-17 05:04:57 UTC
From: SPERNA1@ua1vm.ua.edu
Message-ID: <1736314499.SPERNA1@ua1vm.ua.edu>
Source record: 169232

I have an ICD Link but I don't think any of my drives provide termination
power. I have a Quantum Q280, an old Syquest 555 (44meg) and a Tandberg
3660 Tape Streamer. If anyone knows the jumper settings for these drives
to enable them to provide term. power, or knows a safe hack to pull
5 volts from a power supply please help!

Any assistance is greatly appreciated!

Sam Perna, III
sperna1@ua1vm.ua.edu

>some time??

All I know is that 2B released a new version of NVDI - 3.03, and
released MagiC!3 for ST/TT machines.

I don't think Atari were there, if they did they would only have showed
the Jaguar.

4639. Need info on samplers

Newsgroup: comp.sys.atari.st
Date: 1995-03-17 10:03:14 UTC
From: Lars Eriksson <lan@tip.net>
Message-ID: <3kbmp2$pnv@nic.tip.net>
Source record: 169239

Friends,

I've been lurking on this newsgroup for a couple of weeks just to see if there is any info floating around conserning sampler SW/(HW) for the Atari, but haven't seen any. So I've decided to put this to the group.

Me and a couple of friend are using Replay Profesional to sample a lot of records putting toghether new hip-hop (-ish) songs, just as a hobby-project.
We are beginning to experience some limitations in the program, especially conserning sound quality and not beeing able to do time-streching. So my questions to you all are.

1) Are there any updates for Replay Professional?
2) Does anyone has experience with Replay 16 vs Pro?
3) Where can I get Replay 16? At what price?
4) Are there any "add-ons" for Replay 16? Such as timestreching.
5) Can you recomend any other low-budget samplers for Atari? If yes; what does it do, where can I get it, what's the price.
6) Where can I download samples from the Net in the .AVR or .SPL format? Or any other format for that matter.

TIA
Lars Eriksson

Within Europe, Eurocheques are easy - you just use a special chequebook to write a cheque in whatever currency you need. They're not too expensive if you already have a eurocheque book although many banks charge an annual fee for the service.

Save disable is one thing I do object to; there's no way I can evaluate
how useful a program is when there's no way I can use it in real life. I
don't mind lots of extra features being missing but I think a shareware
program should be usable.

| megs or do I have to hard wire somthing else.
|
| If any one can help please as I would like more than 1 meg of ram.
|
| E-mail me at firefox@byron.apana.org.au.
|
| Thanks,Mike
|
```

Hi Mike,

I once had the same problem: I wanted to expand my STE's memory from 0.5MB to 1MB. The guys in the shop where I brought the comp installed two 1MB chips instead of two 256KB. I only realized what they've done some days later when FastCopy III told me I had 4MB of free RAM !!! This explained why some programs crashed, who never done so before.

After a help call on comp.sys.atari.st, I got the answer: it's called

simmfix.prg (by Matthew Lodge)

You can find it on numerous ftp sites. You just put simmfix.prg in the Auto folder and boot your comp. Unfortunately, it doesn't work everytime: you sometimes have to boot 2 or 3 times before simmfix does its job. So, it's handy to also get some sysinfo program that'll tell you what amount of RAM you've got: re-boot until it's set at 25xx Kbytes.

For self auto booting programs (games for example), you just boot with simmfix, assure yourself you really have 2.5MB; then, to start the game, just do a soft reset: Ctl-Alt-Del.

I never had any problem. And it's so comfortable to have 2.5MB ;-)
(Especially when you've got no hard drive...)

Well, I hope this will help you. Don't hesitate to ask for further details if you need.

Good luck.

OK, we need a nice GEM based replacement for ifconfig et al (although once it is set up you shouldn't need these anyway). But there is nothing wrong with Mintnet itself, and there is no alternative currently available.

One reason it's hard to set up is that it is very flexible. There are lots of programs for the PC to handle dialup SLIP connections but none of these handle ethernet and most don't handle a permanant SLIP connection. Netware comes with a TCP/IP driver for ethernet, but this doesn't handle SLIP. So how would you set up your PC to handle both? By having one driver handling the socket library and add on interfaces for different types of hardware, MiNTnet is both harder to set up and far more flexible. (OS/2's TCP/IP and the networking stuff for any Unix system is identical to what MiNTnet has, although possibly with install programs to do some of the work for you.

> >It's a very widespread, well documented, standard interface.
>
> Oh. Maybe I'm wrong, but when I got the MiNTnet binaries (or were
> they sources? :-), there was not even a 'hacker's guide'.

There were man pages for all the utilities and for the socket functions. There are also lots of books available about both as they are ports of the standard unix tcp/ip tools.

Atari wasn't there, just like last year. Atari has nothing to do with
computers anymore. They hardly know the word 'ST' or 'Falcon'. There also
won't be any new computers anymore (the next years). Forget it. Just
don't believe any other silly rumors!

As a developer I would surely know otherwise...

That's true. MiNTnet seems to be doing fine on my machine. Too
bad I haven't been able to set up any program that makes use of it...

What would already help, is a freshly designed info file format,
which is NOT inspired on the UNIX way of doing things. So no /etc
directories, just one file C:\NETWORK.INF.

The utilities should be made to work without requiring a Minix file system
and similar quasi-unix shit such as root permission. I still have the
strong opinion that MiNT's being multi-user is the most stupid mistake
that could have been made.

>There were man pages for all the utilities and for the socket functions.
>There are also lots of books available about both as they are ports of the
>standard unix tcp/ip tools.

OK... but the unix tcp/ip tools give you slightly more info than the
'permission denied' quoted above.

: pages and articles before making sweeping statements.

I did actually subscibe to the magazine for a few months prior to
its demise, and I thought it was EXCELLENT. The use of the word
bit was meant to imply not a huge amount, but perhaps more than
could have been justified, considerning the numbers sold. Perhaps
this was unclear.

If STR was around I'd almost certainly subscribe to it!

I have been playing Towers II and saving my games with no problems. I also
can load up my saved game with no problem at all. Try copying you game to
another part of your Harddrive and then try saving again. You might have the
game now at a defective part of your harddrive. Might want to use Diamond
EDGE program to check your harddrive. I have a 4 meg Falcon and I have been
running the game with nothing else in memory. I do not know if this is a
factor.

Unless Robert has a 520 ST like the one I bought in '86 with just
the bootstrap in ROM and a nice picture of a floppy drive on the
screen asking for the system disk. Right?

Yes I may have been getting my classes and groups mixed up. I am new to
this FAXing game, but I thought I had it sussed.
However, I am still sure that my USR Sportster 14K4 will not support CLASS 2.
CoMa will not drive it when set to class 2 and neither will Junior Office.

Steve Taylor.

4666. _UPDATE_ 7800 System For Sale

Newsgroup: comp.sys.atari.st
Date: 1995-03-17 23:13:04 UTC
From: Mark Santora <santora@delphi.com>
Message-ID: <524bG5A.santora@delphi.com>
Source record: 169110

Here is how it works. The 7800 system comes with it's orignal box. All 7800 games come with box and manual. I have an extra cart not listed below that doesn't work, but I will throw it in anyway. Most 2600 carts come with box, but instructions are not likely. All games were recently tested and work except where noted.

I accept check or money order. If you send a check, I will wait until it CLEARS through my bank before sending out the system. Because of the large amount of bulk in the boxes, buyer pays shipping. If you don't want the boxes, it will cut shipping and bulk down.

I will also be out of town from March 9th to the 14th. If you email me with an offer and I do not get back to you, please be patient. I will keep this auction open until Saturday, April 15. I will notify all interested on a weekly basis on the highest bid for the system.

I WILL NOT BREAK UP THIS SYSTEM

Offers to:
Mark "Stingray" Santora

Actually, the VHold problem is most likely a) due to the fact
that your monitor is a Goldstar monitor (made in Korea in 1986) with
the FCC ID EBA9QKSC1224 (look in the back of your monitor) which
happens to do this (which means that buying the CatBox is a good
idea, as you needn't set the Vhold in the back of the monitor every
time), b) you or someone you know has been fooling with the VHold
of the monitor, and since the Jag is more sensitive to the VHold, it
seems, you will get the vertical scrolling, or c) a combination of
both. I have the Goldstar monitor, and if I set my monitor with my
Falcon (for a better screen setup in overscan (which I no longer need
thanks to a wonderful program called OverCadre)), the monitor scrolls
when plugged into my STe. I bought a cable from Redmond Cables, and
I suffered from the scrolling problem due to the monitor type (the

cable was fairly poorly made that time, although most people give RC two thumbs up for theirs, so I assume someone was just having a bad day or something.)

The dark picture can be lightened. However, this is not something I would recommend for you to do, since it involves removing the monitor's casing while the monitor is on, and messing with the settings inside (I think you have to adjust the electron guns). *Very* painful (could even cause death). Rather take it to a technician. It's safer.

Hope all this mindless babbling helps you guys,
Leslie

4671. EXPERIENCE FALCON DEMO

Newsgroup: comp.sys.atari.st
Date: 1995-03-18 04:37:39 UTC
From: bx685@FreeNet.Carleton.CA
Message-ID: <D5MCut.Jy8@freenet.carleton.ca>
Source record: 169117

Instructions in the Doc file for the Expereince demo indicated we
can use VGA monitors. afew of us here in Canada are having
troubles where the screen locks up at the main screen. I have used
a SC1224 colour monitor and it seems to work fine until almost to
the end of the demo where it freezes. I have disabled all acc's
and my auto folder as weel on my Falcon.
Any idea folks why this may be happening??

Perhaps some of you can reach one of these fella's??

4673. Towers II save game

Newsgroup: comp.sys.atari.st
Date: 1995-03-18 07:02:30 UTC
From: ralunsfo@uncc.edu
Message-ID: <3ke0i6$2qs@news.uncc.edu>
Source record: 169120

Well, someone, (I'm assuming involved in the production) sent me e-mail stating that a patch would be uploaded, and that a buggy first version would be replaced with a 'clean' version of the file. I have yet to find a patch, but I assume the clean one was uploaded, as most people (I did have some tell me they had the same problems) are not having problems.

Thanks for all the replies,
Russ

4674. HD Partition help req.

Newsgroup: comp.sys.atari.st
Date: 1995-03-18 07:34:24 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <03181995.073424@empyr.dircon.co.uk>
Source record: 169118

Hi,

Further to my rather panic induced post about losing all my HD data, I have managed to find my disk with 'Cleanup.prg' on it and got partitions D: to I: back again, with all data intact ! :-))))

BUT...I've lost C:. :-(

What has happened is that something has gone wrong with partition C:. Cleanup reports that a partition of 'Unknown' type is present between sectors 1 and 9767, which is where partition C: use to be. The rest are correctly recongised as GEM partitions. As TOS allocates 'drive C:' to the first correct GEM partition it can find, which in my case is now the partition starting at sector 9768 (the start of my old partition D:), all my data is 'one drive out' so to speak. All the data that used to be on drive D: is now appearing as being on drive C:. This continues all the way to I: (which is now H:). Apart from this causing chaos with the path commands in all my software :-), I would like to try to get my old partition C: back too.

The data contained between sectors 1 and 9767 is impossible to access. I _could_ rebuild the partition with ICDFMT.PRG, but this would certainly destroy any data left there. Writing the partition info from Icdfmt.prg has no effect. It does not restore sectors 1 to 9767 into a valid GEM partition.

Can anyone suggest a way of doing so ?

Cheers,
Kev.

Message-ID: <199503181157.a46190@m4.maus.de>
Source record: 169125

>>Hey, I really fouled up this time. I just bought myself this nifty new
>>Falcon system. I used to have a 2.5 meg ST with ICD Host, Adaptec 4070,
>>and two RLL HDs using the ICD Link II drivers. When I connected them to
>>my preinstalled IDE HD Falcon, it booted the HD's, the IDE and only SCSI
>>device 0 LUN 0, but ignored my HD on SCSI device 0 LUN 1 (Yes, I removed
>>the host adapter and connect straight to the Adaptec). The software on
>>my IDE was HDX 6.x. I was not pleased with losing my last hard disk.

This is because Atari's hard disk drivers don't support more than one drive per
SCSI unit.

>So
>>I stuck the ICDBOOT.PRG into the C AUTO folder. It worked decent, but
>>was redundant as the HDX autobooted. I couldn't set the ICD to autoboot
>>because the HDUTIL.PRG needs to have an ICD host adapter in order for it
>>to function (dirty trick). So, I whipped out my old version of Pro
>>Utilities that I had and all hell broke loose. I totally trashed my IDE
>>(with Atari Works, Sound Manager, Audio Fun Machine, and HDX utilities)
>>drive and have absolutely no way of using my hard drives without booting
>>them from floppy. Remember, I can't make it autoboot without HDX or
>>HDUTIL.PRG.

You'll have to upgrade your ICD Pro stuff to its latest revision - then it will
support Falcon SCSI and IDE (and still support two-drive controllers like these
old Adaptec 4000/4070).

bye, Peter

I haven't got an internet link to test it with. I can telnet or ftp
localhost OK, but that is of somewhat limited use!

> What would already help, is a freshly designed info file format,
> which is NOT inspired on the UNIX way of doing things. So no /etc
> directories, just one file C:\NETWORK.INF.

Having everything in the /etc directory makes it a lot easier to port unix
programs to the atari. I don't see any problem with having everything in
the /etc directory, although a program (preferably GEM based) to configure
things would be a great improvement.

> The utilities should be made to work without requiring a Minix file system
> and similar quasi-unix shit such as root permission.

MiNTnet itself, and the client ftp, telnet etc programs do not require a
minix filesystem, or a multiuser setup, and without a multiuser setup
everything has root permission.

I hear it won't have a coverdisk as standard. How much will it cost then ? I sometimes look at STF's coverdisk and wish they'd not have one at all, rather than a few PD utilities, glorified by "X stupendous ST programs !" splattered around liberally in large lettering. How embarrassing.

MIDIMAZE 2 is a laugh. I play this at home on my MegaSTE and 520STFM
when friends are around. Up to 16 players. There is a beta version of
MM3 hanging around, which doesn't run in mono, but has a larger screen
display and sampled sound. Apparently MM2 sucks compared to the first
version but I wouldn't know.

UDS' new Substation for the STE is supposedly going to have four machine
linkup via MIDI, but won't be out until 1st March.

Stunt Car Racer by (?) is cool, and supports null modem so I think that
would be fun. It's commercial and quite old now.

One of the main problems I have with ST Format is that it thinks I
have a mental age of 6. Every other word seems to be made up! and
the ones that aren't are all superlatives. It gets tiring reading
about how exceptionally magnificently fabulous (stupendous?) a
disk cache is. For me at least they cry wolf too often.

Simon.

Thank you for eneryone who responded to my question either by posting or by mail. I've tried different programs that support ISO-LATIN-1 and here's what I found:

-Stalker: Could find only upgrades. Is not shareware?
-Uniterm: Can't quite figure it out. I think it suffers from its old age.
-Connect: This is what I was using all along, but didn't know it could be tweaked to use ISO-LATIN-1, until it was pointed out to me. It took some time, but now I have scandinavian characters, or at least I have them if the ISO-LATIN-1 users of you see them here (������). I tried lots of character set, keyboard and bank g0-g4 combinations and I made a scan table, and now it works but I don't know why, because I've no idea what the banks mean. Now I only wish the program was 2/3rds smaller and didn't have all the features I don't need. Maybe I'll take another look at Uniterm some day.

Source record: 169145

>I read somewhere that there is room available in the Falcon for a 386sx-
>processor... is this correct?

Not exactly. The Falcon has what's called a "Procesor Direct" slot.. that is, the processor buss is brought out to a connector on the motherboard allowing addon boards to be plugged in.

You can't just plug an 80x86 CPU chip into the Falcon's motherboard and have the equivalent of a PC.

There are a few PC emulator boards that CAN be plugged into the DP slot, although I don't have any direct experience with any of them. There are always rumors about new ones being developed, but I don't know what exactly really is available.

As for CD-ROMs, there are a lot of them that are directly usable by Atari systems now. If you mean you want to run specific PC applications that are on CD-ROM though, you'd need some kind of emulator for most of them.

>I have noticed that there can be a *not so slight* delay between posting and
>delivery.

Indeed, I agree that sometimes there can be quite a lagtime in net mail or
newsgroup posting.

However, when someone responds the next day to SOME articles, and ignores or
edits out portions of others, I think we can fairly easily assume there is
no problem of propagation delay in this case.

4701. Towers II problems

Newsgroup: comp.sys.atari.st
Date: 1995-03-18 18:29:15 UTC
From: gordov3@icebox.iceonline.com
Message-ID: <D5nFEy.7qF@iceonline.com>
Source record: 169150

There has a been a patch released to fix the problem that some people have been having with TowerII game for the Falcon. I do not have access to ftp so I cannot upload it anywhere. But ask around to see who can get this patch to people who need it. This patch will fix the save game problem, and update towersII to version 1.01 from 1.0.

4702. Baracuda 040?

Newsgroup: comp.sys.atari.st

l> Falcon. Does anyone know:
l>
l> a) Quite what it is? (ie video enhancer too?)
l> b) When it will come out?
l>
l> Cheers in advance, Leon.

well here's some info for ya....

Barracuda 040 - Falcon 030 Accelerator

Who needs a Barracuda 040?

Anybody that wishes to accelerate their Falcon
030 computer.

What will a Barracuda 040 do for me?

The Barracuda 040 will greatly enhance the
performance of the Atari Falcon 030 computer
system. It will give you the speed, performance
and options unparalleled to any other accelerator
available today. It will increase productivity, by it's
raw processing power alone.

Specifications and Features:

---

* 68040LC-33MHz or 68040-33MHz
* Performance increases to 900%
* Fully 68030 compatible
* 8 Kilobyte on board cache
* 1 wait state operation
* Memory expansion from 1 Megabyte to 128
Megabyte of 32 Bit Local RAM
* Memory Management unit
* Floating Point Instruction Unit 040 only
* Enhanced video output, software driven for
higher video resolutions up to 1280 by 1024
* Enhanced DMA control and access
* 32 Bit Flash ROM (for easy OS upgrades)

* Full system control logic supported by on board
custom ASIC design
* Video Expansion Buss
* 2 VME busses (96 pin) for use with plug and
play options

Options:
----

* 68040-33MHz with FPU
* RAM Card memory expansion from 1 Megabyte to
128 Megabyte of 32 Bit Local RAM
* 486DX-33 MHz PC Emulator
* Video Funnel - Video Frame Grabber
* Ves 2000, 3000, 5000 - Video Editing System

Availability - February 1995

Some Commonly Asked Questions:

Q: Will the Barracuda 040 fit in my stock Falcon case?
A: No, because of the limited power supply included with the
Falcon 030, as well as space restrictions, the user will need to
use an alternate mounting enclosure with larger power
supply.

Q: Is the Barracuda compatible with my existing software?
A: Yes the Barracuda is 100% backwards compatible with all
current software packages.

Q: Are there many problems with the Falcon's DSP?
A: NO, Extensive testing has been done to assure proper
operation with the internal DSP, all timing associated with the
DSP will now be handled by the Barracuda 040.

Q: Can I install the Barracuda 040 myself?
A: Yes, although some technical knowledge will be necassary,
the installation has been mad fairly simple, some soldering will
be required.

Q: What do I need to know about the RAM option?
A: The RAM card supports from 1 Megabyte to 128 Megabyte of
local RAM, (TT compatible). The only restriction placed on you,
is all 8 banks of memory must be occupied by memory of
the same type. E.G. If bank on uses a 1 Megabyte
SIMM, then the entire board will need to use the 1 Megabyte SIMMs,
giving you a total of 8 Megabyte of local RAM. 4 Megabyte
SIMMs will give you 32 Megabyte, and 16 Megabyte SIMMs 128
Megabyte.

Q: What about RAM speed?
A: 60 to 70 ns is recommended.

Q: Does the extra RAM help system performance?
A: Yes, local RAM increases system performance greatly.

PRICES M.S.R.P.

* Barracuda 040 from $800.00 US
* 68040-33MHz Proc. Upgrade $150.00 US
* RAM Expansion $300.00 US
* 486DX-33 PC Emulator $400.00 US
* Video Funnel $600.00 US
* Video Editing System from $1500.00 US

No problem so far, but: your article header does _not_ include a charset
definition, as mine does. IMHO this is necessary for correct decoding, as
there are other code pages than 8859-1.

If you mean to 'view' Gifs in 256 colours on an STE then you
might be interested in the shareware PhotoChrome graphics card
emulator. It can also convert them to 512 colour Spectrum format.

It claims to be able to display 19200 out of 32768
colours from 24 bit Targa (.TGA) files without any extra hardware.

The results are almost unbelievable.

Another package worth looking at is the shareware
Speed-of-Light.

Hi Rick,

> Does anyone know where I can purchase a copy of CALAMUS, CALAMUS FONT
> EDITOR, and OUTLINE ART?

Well if contacting a company across the ocean is not too far fetched for you,
try JCA Europe Ltd (+44-734-452 416). Alastair Craig will certainly be helpful
in providing you with Calamus 1.09 for ?59.00, Calamus SL for ?199.00 and
Outline Art 3 (lucky you, price recently reduced with 50%!) for ?99.00.

Say hello to him from me, will you?

I'm not sure where you could get Calamus Font Editor from, but I've seen it and
it is *not* very user friendly. Try *Fonty* instead! Available from FaST Club
(+44-602-455 250) and priced at ?12.00.

Say hello to Paul Glover from me, will you?

Yours sincerely

No it is not...!!!

The only real good program to view GIFs on a STE is Photochome 4, I do sugest
BobR you should get a copy and try it, you will end up tossing GEMview out of
the window...

[description deleted]

AFAIK, Wizztronics have announced the same board for the TT, with the name
"Alligator 040". Anyone got the facts on this one?

Seriously, I am tempted to buy one and throw my current FastRAM board out
instead.

: of the ftp sites (hensa, I think). Anyway, this has installed ok and I can
: now do most of the commands I use for unix (cd, less, chmod, etc). What I
: want to know is how to use accs with mint? I put some accs on the root of C:\
: but only Toswin loads up. I use a program called ACC.PRG to load all my accs
: from a folder. I have this running before Mint, and the message comes up a
: boot that ACC.PRG has loaded, then Mint loads, but the I get the message
: 'Leaving Mint'. What do I have to do to get my accs loaded?

Get rid of ACC.PRG. If you want to load your DAs from another directory,
then you must change the environment variable (set in GEM.CNF) called
something like accpath (if you want to know the exact name I will look it
up for you.) This variable contains a path to load the accessoiries from.
There should already be a line in GEM.CNF pointing to C:\. Just change
this in a texteditor.

The other way is of course just to put your accessories in the root dir.

Hope that helps,
Mario Becroft (mbecroft@iconz.co.nz)

4712. screens captures !

Newsgroup: comp.sys.atari.st

From: huots00@DMI.USherb.CA
Message-ID: <3kgc7o$rpp@tohi.DMI.USherb.CA>
Source record: 169012

I need a screen capture of the desktop of Atari (Gem) computers.

The best is a capture from a Falcon. (256 coul.)

Is anyone can say me where i can find that (ftp and pathname) ?

I've succeeded, and got a file named flcn_pnt.lzh, but the images
files are in .PNT format (Prism), and i'm not able to convert them.

If anyone can send me a capture of his falcon desktop (in e-mail uuencoded) or
say me me where i can find such pictures (ftp or Web ...), that would be
very apreciated !

(Sorry for my bad englisg writing, i'm not an English native person)

Thank you ! (Please, reply in E-MAIL, i'm not able to come in Usenet
very frequently).

Bye!
Syl!

Out of the ether, the following was mentioned by David...:

DP> Availability doesn't end when production ends. I would guess that
DP> Motorola will have at least a 3 years supply in stock at the time
DP> when production stops.
Motorola, like Intel, don't hold much in the way of stock, maybe 2 months worth
but no more. The more stock they have then the more any capital is tied up in
old products.

Distributors may, however, have more stock than this. It all depends.

Maybe, that is if you use a color monitor. It does not do B/W A.F.A.I.K.
I have also a program that gives a kind-of grey-scale on the B/W monitors
by flickering. Sometimes very nice. If you are interested, I will try to
fill in the details.

>uses nullmodem- or midi-cables?

MIDICom is very good. The demo is free and is limited to sharing drives A and C on each machine in the network. You can also share a printer. It can use Serial, MIDI or LAN.

True! And I don't think that C-Lab even is capable of doing an OS. Why bother anyway? When MagiC 3 finally gets released, why stick with TOS?

Sorry Ofir please take the blinker off, it was more Falcon
than any thing else..

My self and another were getting a bit fed up with all the Falcon
stuff that was in it, more like 80%....

Lets bring back ST-World, the Real Atari magazine....

Falcons might sell in the UK or do they, but they don't sell here at all,
I can get a full Multimedia PC for less than a Falcon 4/60 with out monitor
that has been in a shop here for 2 years..

Sorry the Falcon is DEAD no real Support, and from what I read here I would
have to spend some $1000 to bring it up to speck and then it still has
a stuffed OS with no more support....

Come on lads Please get real....!!!

That sounds reasonable.

I payed about 580,-- DM for the mechanism, _only_. Very nice drive, silent,
and fast, too ;-)

BTW, does anybody know which is the latest firmware for a SQ 3270S? Mine
identyfies as 1_24. I have heard of a firmware 2_09 or something to that
efffect.

Can SyQuest be reached via InterNet? I sent a fax to the technical folx in
Belgium (asking for a manual and some tech.-details), but didn't get a reply
as of yet.

Bye.

I have also experienced this error with HSMODA4,5 &6 on my TT on modem
port 2. I simply do not use it anymore and I have no problems at all. I
use Stalker 3.04 with a serial buffer of 20k and a 14.4k modem with a
DTE speed of 38400. I also found with HSMODA that at 38400 I would not
alwasy get a connect. Perhaps someone else has similar experiences they
might like to share. I get exactly the same speeds from my TT with or
without this program plus only on uploads I get NO positioning errors.
Not a techno buff but I feel that it is something to do with buffer
overflows...perhaps someone else can help. Of course it could also be a
combination of using Stalker.

I look forward to further info on this as well.

The Toshiba drives will definetely do that. Works like a charm on my XM-3401

The newer ones, i.e. 5201, 3501, and 3601 should do that as well. The latter being _very_ fast, some 600plus kb/sec transferrate.

>- the drive should be external (and SCSI off course): or is there an easy way
> to install an internal, or even IDE, CD-ROM to a Falcon (can you

ATAPI-IDE should work on a Falcon, given the appropriate driver, that is.

> convert IDE to SCSI?)

Why would one do that in the firstplace?

>- which driver I need for this on my Falcon 4/65

I use CD-Tools from Julian Reschke. Works great. Sold by Hard & Soft in Germany. I am not aware of foreign distributors for this fine package.

>- how much I should expect to pay for the drive...

Take a look into the current comp-mags ...

Allthough I pesonally agree that the falcon is a nice machine, PC's are not to be compared. If you want DSP's or "other brand name" processors, just stick'em in! (Example: Janus, the Atari-emulator :-)

Its expensive to do so, but it gives a certain degree of freedom to the end-user to particiate in the design process.

I have nothing against Amigas either. I just don't buy them :-)

mnb20@cam.ac.uk (Mark Baker) writes:

>Having everything in the /etc directory makes it a lot easier to port unix
>programs to the atari. I don't see any problem with having everything in
>the /etc directory, although a program (preferably GEM based) to configure
>things would be a great improvement.

Two things:

1) If you admit to the untolerable laziness of programmers
by keeping the /etc convention on Atari systems, you are
bound to suffer from even more laziness (if you give
someone a present, he will usually react by expecting
even more). Besides, don't programmers or hackers have
anything better to do than running GCC on existing sources?
Isn't it time for new challenges? If you think UNIX is
perfect, then sell your Atari system and get a cheap
Linux box. I did (kept my Atari as well), but I still think
there are lots of things that should change should UNIX even
want to become the leading operating system (for home use).

2) Having everything in the /etc directory is not a trivial
matter. Most people don't even have /, let alone /etc.
And the U: file system is far from ideal, in my experience.
For example, whenever I open U:/ in a Gemini window, I am
asked to insert disk B: in drive A:. A small thing, but
it has prevented me so far from running MiNT in everyday Atari
life.

>MiNTnet itself, and the client ftp, telnet etc programs do not require a
^^^
:-)

>minix filesystem, or a multiuser setup, and without a multiuser setup
>everything has root permission.

I remember running ncftp once, and it definitely checked the
/etc/host file (whereas, btw, some other programs look at /etc/hosts
with an extra s---long live UNIX ports...)

I heard Atari had a lot of space for an upcoming UK show, NOT CeBit. And
this UK show is supposed to be the official release of the Jag CD-ROM.
I think the show was called ECTS.

I too have a TT, and everything in the previous posts in this thread have been pretty much accurate. But one thing was left out. The TT video output is a VGA, but on a standard VGA monitor it is a little narrow. If you can, get an Atari PTC1426 monitor. On the back is a switch to toggle display mode from standard
VGA to TT. The TT mode elimnates the black border on the right and left edge of the screen so things don't look distorted. But, even on standard VGA, they don't
look very distorted. still quite sharp.

It's alive in the Semper mailer, but you can't really use that for anything
unless you use a fidonet comp. mailer.

Also it's known to be supported by binkley mailer, but i'm not sure if they
have finished it yet.

Beside that, i'm not sure you gona find Hydra any else where.

From the Holy Book of <avg.795626652@news.cwi.nl>
as spake by avg@cwi.nl (Annius Groenink) :

>mnb20@cam.ac.uk (Mark Baker) writes:

>>Having everything in the /etc directory makes it a lot easier to port unix
>>programs to the atari. I don't see any problem with having everything in
>>the /etc directory, although a program (preferably GEM based) to configure
>>things would be a great improvement.

>Two things:

> 1) If you admit to the untolerable laziness of programmers
> by keeping the /etc convention on Atari systems, you are
> bound to suffer from even more laziness (if you give
> someone a present, he will usually react by expecting
> even more).

Funny, that's exactly the description I was going to give of _your_
behavior --- receiving a fully functional TCP/IP socket interface (at no
cost, what's more) and whining because it doesn't have a pretty GUI
interface.

> Besides, don't programmers or hackers have
> anything better to do than running GCC on existing sources?
> Isn't it time for new challenges?

The maxim "Don't reinvent the wheel" springs to mind for no obvious
reason.

The whole point of MiNTnet being designed the way it is, Annius, is to
make it easier to use the tremendous existing TCP/IP software base.
Call that "laziness" if you want; we call it "code reuse", a
time-honored tradition in the programming world.

> If you think UNIX is
> perfect, then sell your Atari system and get a cheap
> Linux box.

No, it's not perfect, but it is widespread, well understood and well
supported, and it has lots of very useful software for it. You can see
a lot farther if you stand on the shoulders of giants.

> 2) Having everything in the /etc directory is not a trivial
> matter. Most people don't even have /, let alone /etc.

In mint.cnf:
sln c:\etc u:\etc

You've got an /etc now.

> And the U: file system is far from ideal, in my experience.
> For example, whenever I open U:/ in a Gemini window, I am
> asked to insert disk B: in drive A:.

You shouldn't really have to open u:/ in a GUI window; that's the point of this nice GEM configure program that everyone keeps telling you you should be writing. ;)

>>MiNTnet itself, and the client ftp, telnet etc programs do not require a
>>minix filesystem, or a multiuser setup, and without a multiuser setup
>>everything has root permission.

>I remember running ncftp once, and it definitely checked the
>/etc/host file (whereas, btw, some other programs look at /etc/hosts
>with an extra s---long live UNIX ports...)

Did I miss something? You don't need a Minix filesystem or a multiuser setup to have an /etc/host[s] file.

The bottom line is this: MiNTnet works. You said yourself that it's the user interface, not the socket interface, that you're complaining about. Fine. That knocking sound you hear in the background is called opportunity. Instead of trying to build an entire TCP/IP system from scratch, and making all the same bugs that Kay et al. have already made and fixed, why not take the existing socket interface and make a nice user interface for it? You'll be a hero. Need help? Have questions? Drop in on the MiNT mailing list. We're actually quite friendly when we're not being derided as "Unix freeks"[sic]. C'mon, Annius, isn't it time for new challenges? ;)

To: gary.ratliff@starnetbbs.c
Gary, I have Atari Logo and, although I'm not willing to part with it, wanted to tell you that it's a great programming environment. Lots of useful stuff built right in to help with development and debugging. When I worked with it I was very impressed that someone would create such powerful environment for the ST -- I had only seen something like that on expensive Xerox workstations designed for advanced Artificial Intelligence work.

It also runs very slowly for some reason, and seems to be limited to a small amount of memory. I translated an old BASIC program called "Animals" to Atari Logo for the old 8-bit computers, and then again to DRI Logo (the one for the ST computers). Very few changes were needed, but it seemed I could have a bigger data file on the 8-bit version. If someone knows how to configure DRI Logo to use megabytes of RAM instead of kilobytes, pass on the knowledge!

It supports *group 3* FAX, not Class 3. The USR Sportster 28800 is FAX classes
1 and 2.0 (not 2, there is a difference), so I would imagine the 14400 model is
similar.

r> download every possible file first?

I wish you would write a local browser at least, Rich - it would be very handy
for me and others to check html code before submitting it... :>

Cheers,
Frank <frank@tachyon.demon.co.uk>

4766. Asteroidia bombs on my computer! Why?

Newsgroup: comp.sys.atari.st
Date: 1995-03-20 02:53:57 UTC
From: stuart@falun.cs.ualberta.ca
Message-ID: <3kiqo5$75v@scapa.cs.ualberta.ca>
Source record: 168963

From what I can tell of the game, it looks of a pretty high quality- so I was a little surprised when about 4 seconds into the game, my screen was filled with bombs.

first two bombs, then a few more, then a few more, then my computer reset.

I have a Falcon030 w/80meg SCSI HD and a VGA monitor (which is actually more of a multisync- a kind of strange monitor, at that).. my falcon has 4 megs and no internal HD (SCSI is external)... and of course modem, etc...

... anything else?... TOS 4.04..

Can anyone tell my why this program is crashing all over?

I ran the "patches" and I used the modfile program...

Dave

4768. PowerDOS?

Newsgroup: comp.sys.atari.st
Date: 1995-03-20 03:38:49 UTC
From: abstract@wam.umd.edu
Message-ID: <3kitc9$fna@cville-srv.wam.umd.edu>
Source record: 168959

I have a program which says that it needs PowerDOS to run. Is
this something to do with multitasking? - I don't have Geneva or MultiTos
or anything... Thanks in advance for help!
--Lunatic

4769. Mac Sac+

Newsgroup: comp.sys.atari.st
Date: 1995-03-20 05:04:13 UTC
From: "Mr. Cool Net-Pseudonym" <chandler@nethost.multnomah.lib.or.us>
Message-ID: <Pine.SUN.3.91.950319205935.379A-100000@nethost.multnomah.lib.or.us>
Source record: 168961

I'm interested in playing with the Mac Sac+ which is supposed to be a (classic) Mac I emulator, but I need the correctly formatted 3 1/2" disk. I recall that this requires a Mac hooked up to the ST, is this so?

I recently played with my pc emulator and re-experienced that slower-than-8086 feeling... makes you feel like some real thick processing is going down.

Anyone have any info on this?

David Chandler - chandler@nethost.multnomah.lib.or.us (503)301-3011

That's the conclusion I came to, as well. Did the upgrade patches on
STalker so that I'm now using v3.04 and took HSMOD06 drivers out of my
AUTO folder. My ZModem uploads at 38,400 via 14.4 modem work like a
champ now.

**** SPECIAL VISITORS INFORMATION ****

"If you miss ACE'95 ... you're going to miss it all!"

****
NEWS RELEASE 17: THE TORONTO ATARI FEDERATION PRESENTS - ACE '95!!
****

==========
ACE '95 *** IS ONLY 2 WEEKS AWAY *** ACE '95
==========
LLLLLLLL
LLLLLLLL EVERYTHING YOU WANT WILL BE AT ACE'95!
LLLLLLLL

****
FEATURE EXHIBITOR > Binary Sounds of Stafford, Texas
****
Rick Ladage loves to get Atari users started
in MIDI! Everyone who visits his booth at
ACE'95 (Booth #14), will be treated to some
great demos, great tutorials, and some of the
niftiest products around ... MIDI is mad and
wonderful and creative and easy ... as long
as you've got Rick & Binary Sounds to show
you the way! EDIT TRACK PLATINUM will be on
sale (it's the latest, greatest version of
this fabulous sequencing editor.) Rick will
also have his brand new Digital Recorder for
the Falcon ... AND, he'll be doing a SPECIAL
SEMINAR on MIDI FOR BEGINNERS!
=-=-=-

besides, at his Seminar on Sunday at noon.
Take the escalator up to the Novotel; head on
up to the Mezzanine and look for the JOHNSON
ROOM. Al will be there ... beseiged by
questioners ... holding court, dispensing
advice ... and generally providing TREMENDOUS
Atari SUPPORT to everyone who cares to listen!
=-=

The *GREATEST*ATARI*EXHIBITION*IN*YEARS* is happening on April
1st & 2nd, 1995, in TORONTO!! This is the ACE '95 Exhibitors
List:

LLLL Gribnif Software (NEODESK 4, Geneva!)
LLLLL TOAD Computers (just your basic SUPERSTORE!)
LLLLLL Branch Always Software (GEMulator!)
LLLLLLL Cybercube Research (Cyrel Sunrise Card, CaTTamaran!)
LLLLLLLL DMC Publishing (Calamus, Outline Art 3, Invision Elite!)
LLLLLLLLL Scarborough Computers (*THE* Toronto Atari Dealer!)
LLLLLLLLLL Missionware Software (Flash II, lottODDS, Cyberdrome!)
LLLLLLLLLLL ICD INC/4Play/Black Cat Designs!
LLLLLLLLLLLL It's All Relative (every CD imaginable, Photo Show!)
LLLLLLLLLLLLL ABC Solutions (SARA, Edith Professional, tbxCAD)!
LLLLLLLLLLLLLL Esquimalt Digital Logic (OMEN!)
LLLLLLLLLLLLLLL GEnie Information Services!
LLLLLLLLLLLLLLLL Suzy B's Software (& CDs!)
LLLLLLLLLLLLLLLLL chro_Magic (RAM Gizmo, Pianistics, Crawly Crypt!)
LLLLLLLLLLLLLLLLLL Clear Thinking (EditPlus!)
LLLLLLLLLLLLLLLLLLL Schauzmoll Soft (ORBIT - The first GUI BBS)!
LLLLLLLLLLLLLLLLLLLL Anodyne Software (ExtenDOS)!
LLLLLLLLLLLLLLLLLLLLL Oregon Research Associates!
LLLLLLLLLLLLLLLLLLLLLL Computer Direct! (DirecTT030 and an
LLLLLLLLLLLLLLLLLLLLLLL enormous lineup of Atari products!)
LLLLLLLLLLLLLLLLLLLLLLL Binary Sounds (SMPTE, Edit Track Platinum!)
LLLLLLLLLLLLLLLLLLLLLLL Fine Tooned Engineering (MIO2, Sweet 16)
LLLLLLLLLLLLLLLLLLLLLLL Compuworld (Service, Parts, Drives, Upgrades!)
LLLLLLLLLLLLLLLLLLLLLLL Encore Music (Falcon MIDI systems, Cubase!)
LLLLLLLLLLLLLLLLLLLLLLL Wizztronics (The Falcon Rack, Barracuda!)
LLLLLLLLLLLLLLLLLLLLLLL Steinberg/Jones (everybody knows what they do!)
LLLLLLLLLLLLLLLLLLLLLLL SKWare One Software (Seurat!)
LLLLLLLLLLLLLLLLLLLLLLL BEST Electronics (every Part imaginable!)
LLLLLLLLLLLLLLLLLLLLLLL COMPO (That's Write 3, SpeedoGDOS 5!)

There are some SEMI-EXHIBITORS(?) we should mention too: ASTMUM
(Atari ST/Mega Users of Montreal), will be represented by Kest
Carter-Morgan. Kest is providing support for ESQUIMALT DIGITAL
LOGIC (OMEn), and SCHAUZMOLL SOFT (ORBIT Tele-Information
System). David Tite will be exhibiting his ACORN Accounting
software too ... the most amazing new FULLY IMPLEMENTED
corporate accounting software for ATari computers!

=-=-=-=-=-=-
The ACE'95 SEMINAR/LECTURE SCHEDULE WILL BE POSTED IN 5 DAYS!!
=-=-=-=-=-=-

****
FEATURE EXHIBITOR > GEnie Information Services of .... everywhere!
****
A STRANGE THING HAPPENS ... whenever you log
on to GEnie ... because there's always something
new to DISCOVER, someone new to 'TALK' with,
another useful file to DOWNLOAD, more software
and hardware SUPPORT, Aladdin, GEnie Lamp
Magazine, local & international NEWS,
RESEARCH DATABASES and more! The strange
thing that happens is really just a FEELING;
a feeling that GEnie just might help you
unlock the WHOLE VAST WORLD OF DIGITAL
TELECOMMUNICATION. The GEnie booth (Booth #1),
has its own phone line, so you'll be able to
see first hand what it's really like to sail
through the FINEST ONLINE SERVICE AROUND!
Meet DARLAH, ST.LOU, BRIAN.H, ARCHIVIST and
the rest of the GEnie Atari gang!

=-=-=-=-=-=-
Check our WORLD WIDE WEB pages: http://www.io.org/~schrist/taf.html
or http://www.io.org/~schrist/ace95.html
=-=-=-=-=-=-

MIDI, DTP, Wordprocessing, Graphics, Power Computing, Software
Libraries, Utilities, Accessories, Databases, Spreadsheets,
Accounting, Custom Solutions, Games, Education, Internet, BBS,
Networks, Accelerators, Emulators, 6502 support, 68000 support,
68030 support, 68040 support, Internet, Telecommunications,
JAGUAR Station, User Group Center, INCREDIBLE SALE PRICES,
Software, Hardware, Advice, Service and EVERYTHING you need to
get the VERY BEST out of your Atari!

==========
GETTING TO ACE'95 IS *EASY*. Toronto is directly
accessed by Highway 401 or the Queen Elizabeth Way,
or Highway 400/69. Crossing the US/Canada border
at Detroit, Buffalo, Niagara Falls, Ft. Erie,
Ogdensburg, Kingston, etc., will lead you directly
to Highway 401 or the Queen Elizabeth Way. Take the
Yonge St. Ramp north off the 401 and drive to 5110
Yonge St. (5 lights) If you take the Queen Elizabeth
Way, follow the signs to get to highway 401. *ANY*
AAA or CAA or other Motor League can provide you with
a map of Toronto, Ontario & Canada. Please call us
if you have any trouble! Pearson International
Airport is only 15 minutes away! Toronto Transit

subway access is direct, too - there's a subway
stop at the Civic Center!
==========
BOOK YOUR HOTEL & YOUR TICKETS IN ADVANCE! Call
or e-mail for info ... for INDIVIDUALS, USER GROUPS,
ORGANIZATIONS, DEVELOPERS & DEALERS! The Show Site
(North York Civic Center, Memorial Hall Exhibition
Facility) has hotel, shoppping, restaurants and more!
NOVOTEL HOTEL: $89 Cdn PER NIGHT
(single OR double occupancy)
** Call Novotel direct* @ 416-733-2929 and ASK FOR
A ROOM WITH THE TORONTO ATARI FEDERATION GROUP! **
ACE'95 TICKETS: $6 PER DAY
$10 WEEKEND PASS
*You can also call 416-752-2744 FOR HOTEL or TICKET RESERVATIONS
==========
Meet Dan Wilga, Darek Mihocka, Bob Luneski, Peter
Zalesak, John Trautschold, Craig Harvey, Nathan
Potechin, Mario Georgiou, Greg Kopchak, Al Fasoldt,
Rick Ladage, Jim Fouch, David & Jennifer Troy,
Michael Burkley, Roger Burrows, DARLAH, Craig
Carmichael, Tom Harker, Chris Krowchuck, Jim
Collins, Ralf Dowich, Shawn Tedder, Mike Wilhelm,
Mike Hohman, Christian Ernst, Michael Snape, Ray
Williams, Stuart Watt, Stephen Christian, Steve
Cohen, Jeff Neveu, Sonny Ang, Bill Annand, Stuart
Watt, Robert Engberson, Suzy B, and couple of
thousand show visitors! Don't miss it!

"ATARI *IS* THE GREATEST!"
==========

ACE'95 is being held at:
North York Civic Center
Memorial Hall Exhibition Facility
5110 Yonge St. (at Parkhome Ave.)
Toronto, Canada
April 1-2, 1995 *CALL US* 416-752-2744 or 416-225-5823 *CALL US*

I found out that the problem was indeed HS-Modem...but it was my
fault...I had incorrect settings....

I have a modified serial port (not RSVE), and when it came to setting
up HS-Modem, I selected RSVE on...once I switched this off, everything
was fine. :-)

There will be an 'optional Reader's Disk', no I'm not quite sure what
that means either. Perhaps it is subscriber only or something.

The mag is out on April 7.

I can't wait!!

I got this too, but it didn't seem to affect anything. Have you got
the fonts registered into nvdi.fif? That may help -- choose the Font
Cache CPX and click the "Scan Fonts" button (I've got a German
version, so I'm guessing what the English text might be!)

NVDI 3.02 has been out a while; NVDI 3.03 has just come out according
to Hendrik. I would upgrade to that if you can.

Basically, there is no coverdisk. However, there is a disk available (upto 3 disks, actually), which will contain programs (PD and ShareWare) featured in the magazine. So there will be either a review or feature on a program, and it may be on the disk.

I don't know yet if there will be any free commercial programs on the disk though....

The disks will be competetively priced (don't know if I am yet allowed to say, so I won't), and should be comparable with a PD disk. The more disks you but..if there are more that month, then the cheaper it gets.

To progress further in the game you need to look out for secret walls.
What do they look like, well they are green walls but with a little yellow
blob in the middle of them. Open them the way you would with normal doors.
I've found three of them on level 2 so far, You pull the chain on level
1 and it unlocks a nearby (on level 1 not far from chain) secret wall.

As for the door you can't open, forget the third key. This is where you
start the game, leaving via this door means you've left the Tower and
decided obviously you don't want to attempt the complete the game.

Good game isn't it? Post further questions to me, I'm working away on this
daily.

4783. Atari Web Pages Closing Down!

Newsgroup: comp.sys.atari.st
Date: 1995-03-20 10:38:36 UTC
From: msh@mserv1.dl.ac.uk
Message-ID: <3kjlvc$od1@mserv1.dl.ac.uk>
Source record: 168979

Well I've just had some bad news. At a recent meeting of the computing management here at Daresbury it was brought to their attention the high level of usage of my Atari Web Pages, this service whilst not process intensive had the highest number of accesses on site and as it is not related to the sites purpose the decision was made to close this service down.

The service will no longer be available as of Thursday the 23rd of March 1995. My boss feels this is a shame but senior management would not let this continue any longer. Not wanting to see the pages removed and all the work destroyed I am now in the process of looking for any alternative sites to support these pages. I would be grateful if you could help me in any way with this.

Not to despair I have had a couple of offers so far but would appreciate any further offers of a new site. Thanks in advance.

>I'm interested in playing with the Mac Sac+ which is supposed to be a
>(classic) Mac I emulator, but I need the correctly formatted 3 1/2"
>disk. I recall that this requires a Mac hooked up to the ST, is this so?

No.. the Magic Sac (if this is what you really meant) formats its own disks in its own proprietary format.. not Mac, but not Atari either. You can create as many Magic Sac formatted disks as you like directly from the startup menus right on the ST.

Where you DO need a Mac connected to the ST via serial link is to transfer the System files from a Mac, unless you can get them from another Magic Sac user. The Magic Sac package comes with a Mac disk with a basic serial transfer program, and another one with a matching ST program for this purpose.

All of this also means that you cannot use "real" Macintosh disks with the Magic Sac. You can transfer files and programs by modem using either an ST terminal program and then converting the files to Magic format, or by using a Mac terminal program running under emulation, but you cannot use programs on Macintosh disks.

The Spectre GCR connects to your ST floppy drives and DOES allow reading and writing directly to "native" Macintosh disks. It's also a MUCH better Mac emulator.. worth the difference in cost many times over.

BobR

I'm not quite sure, but I think there is a 386 emulator available
(maybe it was 286, I said I wasn't sure). But I do know it doesn't
emulate VGA with 256 cols. even though the Falcon is quite
capable of showing them.

>
> My problem is that I would like a Falcon for DTP purpouses, but I'd also really like to
> use some of the CD-ROMs available on the PCs...

I don't think you'll be able to use pc CD-ROMs with the emulator,
especially games, as they require sound, (wich the emulator doesn't
support) more than 16 cols. and higher speed.

As for DTP I think most "good" DTP packages run i Winblows(tm)
and therefore run eficciantly on the Falc. Why not use Calamus?

My guess is that you have a loose SIMM (OR no simms!!) I had this
problem with a Simm board in my STFM and it seems to be the STs
reaction to a memory fault - try reinserting the simms.

I don't think this is true, Roger. There weren't many Falcon-specific
products, so it would have been pretty difficult for the mag to be 80%
Falcon even if that's what it wanted to be.

Using a Falcon screen shot (to get colour) does not mean the s/w is Falcon-
specific. There were Falcon-specific PD pages, but there were also several
non-Falcon PD pages.

>I can get a full Multimedia PC for less than a Falcon 4/60 with out monitor
Get one then, if that's what you want.

So, what about it ???

The Falcon is newer than the ST, most Atari-owners (whether it`s Falcon, Eagle, Medusa or MagicMAC) want to get on and not just hanging around on old, slow and boring stuff, which is the only thing the ST is today.
>
> My self and another were getting a bit fed up with all the Falcon
> stuff that was in it, more like 80%....

Well, what can I say..... When the most interesting software is coming for the newer machines, I can`t see why magazines shouldn`t cover it.

There`s no reason in trying to stop the development, just because you don`t want to buy a Falcon. If you`re so unsatisfied with all the Falcon stuff, that is coming and your ST is dying from being old, then why don`t you just switch platform and leave all of us who is soooo "unrealistic" and owning such a "unsupported" machine ???

> Lets bring back ST-World, the Real Atari magazine.....

Yes, that would be wonderfull now wouldn`t it ?????

Lot`s of "interesting" reviews of old ST-programs and games. ooohh YEAH.....NOT!!

I've heard that a THOUSAND times now. Make up a new slogan, will you?
If a wheel doesn't run smoothly, then clearly it needs reinvention.
Most ``wheels'' in the UNIX world are in urgent need of reinvention.

>> If you think UNIX is
>> perfect, then sell your Atari system and get a cheap
>> Linux box.

>No, it's not perfect, but it is widespread, well understood and well

Well understood only by a small elite of hackers who never see
any trees and plants (and have hence forgotten what a nice
environment looks like).

>You've got an /etc now.

Not yet. You'll need to set something like a UNIXMODE variable
or some other horrifying thing. And even then, not everyone
is fit to run MiNT.

>You shouldn't really have to open u:/ in a GUI window; that's the point
>of this nice GEM configure program that everyone keeps telling you you
>should be writing. ;)

Bollocks. What about opening that window to maintain/delete the files
that the nice configure program creates?

4795. Getting Emacs to run on STe

Newsgroup: comp.sys.atari.st
Date: 1995-03-20 12:29:57 UTC
From: cfuhrman@cray-ymp.acm.stuorg.vt.edu
Message-ID: <3kjsg5$3c@solaris.cc.vt.edu>
Source record: 168989

I'm trying to get emacs to run on my Mega STe. I've downloaded
the .zoo files from atari.archive and unarchived it. Following the
directions, I set the proper environment variables (I use Tom's Shell)
and when I tried to run the dumpemacs.tos program (this is the program
that will actually create the emacs M68000 executable) it gave me the
following output:

```
First dump. Commandline .\temacs -batch -l loadup.el dump
Warning: lisp library (/dev/e/emacs/e-lisp) does not exist
Warning: executable/documentation dir (/usr/lib/GNUemacs/etc/) does not
exist

Couldn't rename first dump to xemacs.1!!!
cmd exit code 1
```

Since I've double checked that loadup.el exists, I suspect that I have the
PATH set wrong. This is how I have the paths set up under Tom's Shell

```
EMACSLOADPATH=e:\emacs\e-bin
EMACSLIB=e:\emacs\e-lisp
EMACSETC=e:\emacs\e-etc
TERMCAP=e:\emacs\examples\termcap
HOME=e:\emacs\examples\emacs.rc
UNIXMODE=/.,rELAHdb
```

I have a batch file in Tom's Shell that sets these environment variables,
however, I appear to be doing something wrong. All my emacs files are
under the directory e:\emacs I suspect that I have the UNIXMODE set
wrong but I can't figure out what the exact problem is. I've tried to
set the directory separator to both "\" and "/" but this doesn't appear
to work. Can someone help? I'd really appreciate it!!! Thanks!

Source record: 168991

Personally, I prefer nag boxes or programs that disable themselves after some period. That way, I _use_ a program, find that I need it, and then I pay for it. If it has save or advanced options disabled, I usualy try it once then get rid of it.

Sure, you can reinstall gemview every month, but I need it about once a month, so I registered it. Sure, you can fool connect into not counting your time, but it is inconvenient, so I registered it. The same goes for Everest, etc.

Thinking back, I don't think I used a single shareware that had significant options options disabled. If freedom had, for instance, shown a nag box each first time it is called, I would probably use and register it. Since it is practicaly useless until it is registered, I'll probably wait until I have more memory before I register and use it. Why? Because I don't feel a NEED for it.

Blitting: 1.145 100%
VDI Scroll: 1.710 101%
GDOS Fonts: 0.000 0%
VDI Enquire: 1.700 98%

==========
Average: 99%
Graphics: 100%
Other: 99%

As you see for yourself the rates are identical to a Sunnyvale F030,
wich is highly logical, since this is what it is. It's an Atari F030
with audio fix, internal 500 Mb SCSI HD and 14 Mb RAM, period.

There's absolutely nothing wrong with that, the F030 is a great computer. But there's not much new in it, *yet*. The second generation will come out later this year according to C-LAB, and this should be a more modified version of the Falcon concept.

Cheers
Martin Rossel

4801. Syncing C+LAB MKII/F030

Newsgroup: comp.sys.atari.st
Date: 1995-03-20 14:35:55 UTC
From: m9003@abc.se
Message-ID: <3kk3sb$vi@oden.abc.se>
Source record: 168994

A couple of days ago I tried syncing up two falcons via sequencer
programs for the first time : I had the MK II running Logic Audio
and the Atari F030 running Cubase Audio, both with the latest
upgrades. I set it up with Midi Time Code, wich both programs support,
and Cubase Audio (CAF) slaved to Logic Audio (LA). To my great
pleasure it worked *right away* and the following settings and
possibilities are achieved with this : I set the Sync in CAF to MTC
and made it respond to MIDICLICK. Then I enabled SYNC in the arrange
page. In LA I changed nothing. Starting LA - CAF follows, and once it's had the first
midiclock input it slaves perfectly to LA and follows the LA song
position whether I use the play, stop, ffw or rew commands.
Recording in a fixed position can be achieved by setting CAF to record
mode, where in SYNC mode it awaits external sync, setting the left
and right locators where you want to record and then simply starting LA.
You can also punch in on CAF while running the two together.
With this setup 16 uncompressed tracks or 24 (8+16) comp. +uncomped.
ones could be run at the same time. Yesterday I got a second dongle
for CAF so the next test will be doubling CAF. I'll test running two
CAF's in parallell with 16 tracks uncomped. or 32 tracks comped.
A friend of mine will help me build a "DSP Split Box" wich should
make it possible to split the vital FDI signal so that I can have
44.1 and 48 Khz clock frequency input to both machines.
The ultimate test will of course be recording a stereo file in
CAF, splitting it in two mono files, and then running it left
side on the MK II and right side on the Atari.
Could be a nice phaser effect :-) ......or delay :-(

More Results Later
Martin Rossel

Unfortunately, Harald, in _this_ group it appears that several years
experience as an Atari software developer has little to do with one's
perceived credibility and inside knowledge about Atari Corporation.

Or didn't you know that? ;-)

From: dsb@cs.duke.edu
Message-ID: <3kk9o8$f2j@duke.cs.duke.edu>
Source record: 168997

From the Holy Book of <avg.795701893@news.cwi.nl>
as spake by avg@cwi.nl (Annius Groenink) :

>dsb@cs.duke.edu (Scott Bigham) writes:

>>The maxim "Don't reinvent the wheel" springs to mind for no obvious
>>reason.

>I've heard that a THOUSAND times now. Make up a new slogan, will you?

Why? It, like its referents, works fine.

>If a wheel doesn't run smoothly, then clearly it needs reinvention.
>Most ``wheels'' in the UNIX world are in urgent need of reinvention.

Tell that to the millions of people who use said "wheels" every day with
no complaint. You don't have to be a rocket scientist to run ftp or
telnet.

>>No, [Unix is] not perfect, but it is widespread, well understood and well

>Well understood only by a small elite of hackers who never see
>any trees and plants (and have hence forgotten what a nice
>environment looks like).

Um, Annius, I hate to break it to you, but Unix is widespread enough
that that "small elite" of Unix hackers is probably larger than the
entire installed Atari user base.

Besides, you don't have to be an "elite hacker" to grab the sources for
a Unix network program and recompile it for MiNTnet. You _would_ have
to be to rewrite it to work with this putative Atari-specific TCP/IP
system you seem to be advocating. And you'd definitely have to be to
recreate its functionality from scratch.

>>In mint.cnf:
>> sln c:\etc u:\etc

>>You've got an /etc now.

>Not yet. You'll need to set something like a UNIXMODE variable
>or some other horrifying thing.

Okay, then, two lines:
sln c:\etc u:\etc
setenv UNIXMODE ru
A GEM config program (based on the MDK, for instance) could probably do
this for you.

And again, I hate to break it to you, but some of your precious GUI utilities require environment variables, too (see, for instance, the AVSERVER variable for programs that use the AV protocol). And most newer desktops, like Neodesk or Gemini, let you set environment variables right from the desktop. What exactly is the problem here?

> [...] And even then, not everyone
>is fit to run MiNT.

Define "not fit". Do you mean "insufficient computer resources"? Then they're not likely to be able to do much with TCP/IP either (like Steven said, try writing a network daemon that runs under plain TOS). "Unable to set it up"? That's a job for another one of these GEM configure programs we keep wrangling over. "Unwilling to use it"? Your loss.

>>You shouldn't really have to open u:/ in a GUI window; that's the point
>>of this nice GEM configure program that everyone keeps telling you you
>>should be writing. ;)

>Bollocks. What about opening that window to maintain/delete the files
>that the nice configure program creates?

Um, maybe I wasn't clear on that point. Maintaining (and deleting, as necessary) said files is exactly the _purpose_ of said configure program.

>> [...] Instead of trying to build an entire TCP/IP system from
>>scratch, and making all the same bugs that Kay et al. have already made
>>and fixed, why not take the existing socket interface and make a nice
>>user interface for it? [...] [...] C'mon, Annius, isn't it
>>time for new challenges? ;)

>I've got a few 100 new challenges on paper. I'll put this one in
>the stack (at the bottom, though).

Is that above or below the "challenge" of writing an entire TCP/IP suite for plain TOS? Any way you look at it, writing a user interface for an existing socket interface has got to be easier than writing both.

>>that Atari will supply anyone outside Sunnyvale with the sources
>>needed to finish it.
>
>What makes you think so ?

Well, history has often proven to be an excellent teacher.

Atari has been very 'tight-fisted' with their proprietary code in the
past and there is no reason to suspect otherwise, now. Because of the
tiny market, there is _very_ little money to be made by licensing the
code to a third party and it's likely more trouble than it's worth.
When Atari ever did consider licensing anything, the $$$ they wanted
in exchange made it nigh impossible for the third party to expect any
kind of decent profit. And while this may sound contrite, there is a
lot of sloppy code in TOS and Atari doesn't like airing dirty laundry.

So don't hold your breath on TOS 5. IMHO, of course. :)

4808. WANTED: 520ST's & color monitors for comp users group

Newsgroup: comp.sys.atari.st
Date: 1995-03-20 16:33:14 UTC
From: "Jeffrey C. Davis" <wsh017@uwcmail.uwc.edu>
Message-ID: <3kkaoa$gq1@uwm.edu>
Source record: 169055

Our local computer user's group in Milwaukee is looking for Atari 520ST or 1040ST computers and color monitors. Each year the group sets up a MIDI-Maze ring at Gencon, the largest annual gaming show. Currently, members loan their machines for use at the show, but this is a small, limited number. The group or members of the group are willing to purchase machines with a minimum of a single-sided floppy drive for $50 each and color monitors for $25 each.

The revenue the group aquires from the show is its operating expenses for the entire year. If you can help support this worthy cause, please email me at wsh017@uwcmail.uwc.edu

The group is in the process of merging with another computer user group so the new name will not be decided for another month. The current name is MAST - Milwaukee All Systems Technologies. Once the merger is complete, the group will have non-profit status. Check with your accountant for possible tax deductions for sale and donation of machines and monitors.

Cruise for a Corpse.

I know it's quite an old game, but maybe someone out there can remember what I need to do.

I have reached the time 10.20am, I have questioned all of the available characters and I have tried everything I can possibly think of!
Has anyone got any hints to help me out of this? How do I feed the cat? Where do I find tools?

All help will be well appreciated. Thanks

: Or would CompoScript do what I want?
I don't know about CompoScript, but GhostScript should do what you want.
I use GhostScript 3.01beta (or something close to that anyway), and I'm
satisfied with what it does. You may have problems with very complicated
Postscript files, and GhostScript can't display EPS files(at least I
can't get it to), however.

It's very easy to install. I think I got mine from an FTP site at the
university of Texas, but I can't remember the site name. Sorry.

HM> being _very_ fast, some 600plus kb/sec transferrate.

Most Cd drives are capable of reading/playing audio disc. The worse problem
is the software driver often isn't supporting the drive, unless it's an SCSI
2 drive. I got two cd-rom drives here, and both a capable of playing audio
cd's, but i got no driver who supports it 8-((

So to be sure your cd-rom drive will play audio, you either have to get
an scsi-II drive, or you may be lucky to get the audio scsi commands for
your none-scsi II drive, and then get the author to support it.

4819. BEWARE of Brian J. Hawthorn

Newsgroup: comp.sys.atari.st
Date: 1995-03-20 19:17:34 UTC
From: wgg@col.hp.com
Message-ID: <3kkkce$4g@nonews.col.hp.com>
Source record: 169066

I'm very sad, and upset, to report that Briab J. Hawthorn is mis-using his net privilages.

This is about Brian J. Hawthorn, bh2d+@andrew.cmu.edu.

To make a long story short. I had advertised some Atari computer equipment for sale. Brian made me a offer, which I accepted. We agreed that I would ship it equipment via USPS COD, which I did. Brian did not pick it up, even after several inquiries/promptings by myself. So, I ended up getting stuck for shipping the unit to Brian and then back to myself.

Brian does not answer my email, so I can only assume that he has shafted me.

You may want to re-consider before you arrange a net deal with this individual. If you do make sure you get cash up front.

Thank you for your time,

W. Grant Grovenburg
(wgg@col.hp.com)

Hi all,

I put a program (acc) that I had written and thought was free of bugs
in the root directory of C: drive on my Mega STe. I then found out
on re-boot that there were bugs (or bug!) in it because every time I
boot, my machine bombs with 2 bombs. I would remove the offending
program but it won't boot for me. Also for some strange reason, my
machine (TOS 2.05) won't boot from the floppy but I have known this
for years.

Any help would help...

SMS2 is a versatile O/S that plugs into to catridge port. The high speed
multi-threaded O/S is probably one of the fastest windowing system I have
ever seen. Rather than being a new O/S for the ST it is best to look on
it as a new platform for the Sinclair QL which allows QL users to run their
existing applications faster and allows full utilization of the QL
multi-tasking front end. It is, in effect, the QL version of MagicMac

4827. Converting HybridArtsSMPTEtrack files to ?

From: accesskg@ix.netcom.com
Message-ID: <3kl39u$oji@ixnews3.ix.netcom.com>
Source record: 169070

I have hundreds of Hybrid Arts SMPTE Track II MIDI files, songs I composed. Now that Hybrid Arts is no more, does anyone know if there is a sequencing software program that will import these files accurately, keeping the track, tempo, etc. information intact?

I have experienced no problems with SMPTE Track II, but I am sure there are better programs out there and I would like to upgrade to a more modern sequencing software. Plus, if and when the sync box fails, these files would be useless! I love my 1040ST and would move to another program, or I could switch to PC or Mac if conversion of my files would be possible.

Any response would be appreciated. Thanks.

I would like to order a copy of your catalogue. I live in Sweden. How much
should I send you?

BTW, do you have the email address to Best Electronics? If I remember it
correctly they are suppliers of every little bit and piece related to Atari co
mputers. I would like to order their catalogue as well.

Yours sincerely

I also have a Falcon, but it ran fine for me...Have you tried running it
without the modfile program?
I've gotten the modfile program to run, but maybe you have a bad mod file
or incompatible mod.
If it still doesn't work, I'd try d/l'ing it from another site.
good luck

Yes it will, and mono or 8-bit .GIF's.

> Is it easy to install Ghostscript,

.. I've been using GS.TTP version 2.5.2 with a shell called gemGS.prg
(Version 1.3) to simplify using it. Could be better, but then
the shell is totally configurable.

I've recently downloaded atari version 2.61 which is a .GTP
program with it's own windows etc.

In both cases, unless the postscript files only contain 'downloaded'
or no fonts inside, you will need to get the fonts for the package.
Apparently GS can convert adobe type 1's, but I haven't worked out how yet.

> and where can I get it from?

I got V2.5.2 from a UK bulletin board and V2.61 via a main
Atari FTP site, though off hand I can't remember which ones.

I got the basic set of ghostscript fonts from a friends CD - they
were for the PC version but they seem to work just as well with
an Atari... the files were gs22fnt(a-e).zip.

Avalable is a 286 board by Sack Elektronik in Germany. I don't consider it
the wisest choice to buy this expansion, though, for a Mighty Sonic (TT
speed/FastRAM), a Nova Falcon (graphic card) or a ScreenEye (digitizer)
are also possible occupants of this slot.

A short glimpse on the Nova Falcon: it works with the Mighty Sonic,
according to Mausnet, and currently only 4 megs of ST RAM are possible,
due to some strange reason it'll not like 14 megs.

By any chance are you after some info about transferring files from PC to ST?

If you want you can use a null modem cable and a very good program called
Ghostlink. Which will allow you to traansfer from either computer to
the other.

Or just format your disks in the pc and use these to copy from one computer
to the other.

4836. 56001 DSP

Newsgroup: comp.sys.atari.st
Date: 1995-03-21 05:15:39 UTC
From: ekl@sdf.saomai.org
Message-ID: <D5ryM6.Gu8@sdf.saomai.org>
Source record: 168912
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.next

Is it true that the 56001 DSP can execute 3 threads of execution simultaneously? I heard that the DSP has an average instruction execution time of 1 cycle - does this take into consideration the 3 execution threads, or can I actually get 3 instructions per cycle by using 3 different execution threads?

Does anyone have a neural net simulator? Preferably in 56001 Assembler, or maybe C. There is an application I want to experiment with and I'm wondering if the Atari Falcon will be fast enough for it.

Any information would be appreciated.

G > currently available or under development, including the
G > features planned etc. and the system requirements
G > (MiNT/X/MTOS/MagiC, RAM, additional software (SLIP/PPP)).

Thorsten - the guy on Mausnet is a dufus.

There are at least TWO WWW browsers currently in development.
One by Annius Groeniuk (the developer of EDITH PROFESSIONAL), a port
of MOSAIC, which he hopes will run on a minimum monochrome ST system
with no other software system requirements. He's on this conference
from time to time, so how's about an update, Annius? :)

The other is being done by a fellow named Sid Celery. No details
on that yet, but I'll see if I can get him in the conference he's in
and see if I can squeeze some more details out of him and post them
here.

And also - someone in Toronto has figured out how to get XMOSAIC
running on an ST! According to Sam Mesbah, it'll run using XMint,
and should run on a minimum 2 megabyte ST. He's going to be doing a
seminar at ACE '95 in Toronto on April 2nd on how to configure it
(and will have disks available with everything you need to get
started). I'm hoping to be at that seminar, so I'll try to get
details on that, too.

If the Mausnet guy won't believe that, then tell him to take a
look at the March 1995 issue of .net, page 71, which tells of what's
available for the Atari currently, and of the two WWW browsers in
development (albeit not by name). (BTW, I'm QUITE impressed with the
quality of .net - if only ST FORMAT were done this good <to be fair,
from what I've seen of issue 68 they're headed in the right
direction>).

S > Sorry Ofir please take the blinker off, it was more Falcon
S > than any thing else.. My self and another were getting a bit
S > fed up with all the Falcon stuff that was in it, more like
S > 80%....

Maybe if you took off YOUR blinkers you'd realize that the amount of Falcon-ONLY material was rather minimul. From the copies of the magazine I read and bought, I found it was rather evenly distributed regarding ST and Falcon material - which it should have been, seeing as there is much that can work on both the Falcon and ST. Or did they ship special "Falcon-Only" issues of ST REVIEW to New Zealand?

Ofir, great news on ATARI WORLD! Let's hope it's just as good as ST REVIEW, which IMHO was the BEST Atari-oriented magazine I'd ever seen.

S > Sorry the Falcon is DEAD no real Support, and from what I read
S > here I would have to spend some $1000 to bring it up to speck
S > and then it still has a stuffed OS with no more support....

The only really DEAD computer is the one that everybody doesn't use any more. Much as you may dislike the Falcon or think that a PC is better than it, Roger, there are quite a few people here who disagree with you who get quite a bit of use and enjoyment out of their Falcon.

Plus - to bring a PC up to the spec of a stock Falcon you'd also have to spend a substantial amount of money.

YOU may think little of the operating system of the Falcon as well, but to me it's the operating system that makes the most sense to use and operate. Unlike something like Windoze (which takes up too much memory, is slow, and is admitted by several US PC magazines to be seriously buggy). The only PC operating system that makes any sense and is currently available is OS/2, which is VERY similar to TOS (although it STILL takes up too much memory). And PLEASE don't try to bring up WINDOWS '95, which IMHO is still vapourware.

Besides, speaking of "buggy" systems, Atari isn't the only one who's had that problem - as anybody who's owned a Pentium PC will attest to (buggy as the Falcon had been, at least it could still do

proper math :))

And seeing as the Atari Canada Exhibition on April 1st-2nd is having a lot of developers showing off a lot of Falcon-specific new products (including the C-Lab Falcon II), I'd have to question your "No Support" accusation (albeit it's third-party support, it's STILL support of some kind).

That's all MY opinion of the Falcon and Atari situation. Maybe not as rosy as we'd all like it to be, but much better that the "doom and gloom" people like you like to ram down other people's throats.

The speed of a machine isn't only determined by the processor.
The 68030 in a TT runs at 32MHz, but the rest of the board at
16 MHz. And as far as I know, the board in a MAC runs at the
same speed as the processor. So a MAC with a 25 MHz 68030 doesn't
have to be slower than a TT.

Hold down <CONTROL> while booting, and you'll get a clean desktop - no
DA's / auto stuff. This should work with TOS >= 2.xx (I believe.)

Holding down <ALT> should cause it to ignore the HD, and boot off the
floppy drive....

Hope this helps...

Anthony

4845. Emagic Logic ?S

Newsgroup: comp.sys.atari.st

Source record: 168902

CL> Wrong. Emagic will _not_ support Atari computers any more. At
CL> least, that was their attitude at the Frankfurt fair.

I believe that you are right, Carl. A few months ago when Emagic finally brought out Logic Audio, they announced that there was an upgrade from Logic-->Audio, but there would be no further support for the Atari version. Great way to get customers to move over from Cubase, eh? :-) Emagic waited far too long to bring out their equivalent to Cubase Audio, and CA already had the Atari market to themselves. Then when Emagic comes out after a year of broken promises, they whine that the Falcon market is too small! Unbelievable.

... Dijon vu: the feeling you've tasted this mustard before.

CL> The C-Lab Falcon030 is nothing but a bad joke.

It looks like all they did was slap their own label on the existing Atari Falcon, plus do a few minor upgrades that any dealer could do: Sound levels, more ram, bigger hd. Even if we had to wait a few more months for the 040, they could have at least put the 030 in a tower and/or rackmount case. I wouldn't say it's a "bad joke" more like a big disappointment. On the other hand, the Wizztronics 040 has the specs we want, but the price could be better! :-)

OK, I get the point. It seems like you've answered this particular post countless
times.

|> Get a life, as Roge always says ...

Would you care to offer some justification for this remark ?

Where is this chain?!?! I had a hunt around for it last night but I still can't
find it!!!

>I've got the same Problem.
>But where did you find the arrows?

I think I had to kill a guard for them, in one of the large rooms on the
second or third floor (as you can guess I get lost quite easily in these games!)

Calling all Atari owners, Desert Star Software
are proud to announce the release of Hollywood Hustler.

HOLLYWOOD HUSTLER ADVERT/PREVIEW

*** NOW AVAILABLE WORLDWIDE ***
ALL ATARI ST/STFM/STEs (1 MEG+).

ATARI FALCON COMPATIBLE VERISON
AVAILABLE THE BEGINNING OF APRIL.
(orders being taken now)

H O L L Y W O O D H U S T L E R
- American Version -

THE FIRST LIVE-ACTION POKER GAME ON
ANY FORMAT ... AND IT'S ON THE ATARI!

* * * * THE STORY SO FAR * * * *

WHAT A DAY!

YOU LOST YOUR JOB... YOUR GIRLFRIEND
LEFT YOU... AND YOUR CAR HAS JUST
BEEN REPOSSESSED!

WHAT A NIGHT!

NOW YOU'RE ALONE ON THE STREETS OF
HOLLYWOOD WITH NOTHING TO LOSE AND
EVERYTHING TO PLAY FOR!

YOU WILL NEED ALL YOUR NERVE AND
SKILL AS YOU ENTER THE HARD-CORE
GAMBLING WORLD OF JOE, CHUCK AND
THE LEGENDARY MONTANA SLIM - THE
MEANEST POKER PLAYERS IN TOWN.
HAVE YOU GOT WHAT IT TAKES TO BE
A HOLLYWOOD HUSTLER?

HURRAY! Finally, after all the years of endless
A-T-A-R-I jokes - you've got the last laugh.
Listen as your console crazy, PC proud friends say,
"Wow! What a game!...It must be on the PC...
the Mega-Drive, too"? And you just smugly grin and
shake your head, "Nope!"

* * * * LOOK AT THE FACTS * * * *

THE FIRST FULLY DIGITISED COMMERCIAL
GAME ON THE ATARI ST/STE!

OVER 1 MEG OF REAL INTERACTIVE SAMPLED
SPEECH & FX!

ORIGINAL HOLLYWOOD LOCATIONS

COLOURFUL CAST OF ACTORS WITH FILM
& TV CREDITS THAT INCLUDE
THE ROCKY HORROR PICTURE SHOW..
THE BEIDERBECK AFFAIR..
CONFESSIONS OF A WINDOW CLEANER
ETC.

ADVENTURE STYLE "CINEMATIC" INTRO,
PLUS 3 ENDINGS

SPECIALLY DEVELOPED ARTIFICIAL
INTELLIGENCE FOR TOTALLY COMPELLING
AND WHOLLY AUTHENTIC PLAY

NOTE ON THE LATTER - HUSTLER CONTAINS
WHAT IS PERHAPS THE MOST ADVANCED
GAME ENGINE IN ANY COMPUTER CARD
GAME TO DATE. USING THIER REVOLUTIONARY
MULTI-LEVEL PSYCHOLOGY YOUR COMPUTER
OPPONENTS, JOE, CHUCK AND SLIM,
CONSTANTLY WATCH, ANALYZE AND ADJUST
THEIR PLAY TO THE CIRCUMSTANCES.
THEY'LL BLUFF... THEY'LL LURE YOU
IN AND SOCK IT TO YOU ... BUT UNLIKE
OTHER COMPUTER CARD GAMES THEY WON'T
CHEAT ... THEY DON'T NEED TO!!

* * * WHAT THE INDUSTRY IS SAYING * * *

- to find the numbered address of the FTP site, use the following command,
while inside FTP: ftp> !host FTP-address [CR] i.e. "!host cs.bu.edu"

DOWNLOADING FILES, Instructions: [CR]= carriage return/return/enter
----
1) Go to the directory where you want the files to be downloaded.
2) ftp [CR].
3) open {ftp address} [CR]. i.e. "open ftp.uni-kl.de" [CR]
OR use the (IP) number address, NOT both!
4) "Name": anonymous [CR].
5) "Password": {full e-mail name/address}. i.e. "hallvart@ifi.uio.no" [CR]
6) use "cd" to access the appropriate directory. i.e. "cd pub/atari" [CR]
7) bin [CR]. (set `binary` transfer mode)
8) hash [CR]. (shows 'hash` signs (#####...) when transferring data)
9) get {filename} [CR]. i.e. "get rename.lzh" [CR]
10) mget [CR] to get several files at once.
i.e. "mget syst12.Z fixdsk.arc icon4.zip" [CR]
11) prompt [CR] to download several files with "mget" without having
to reply "y" for each file when asked "get {filename}?".
12) quit [CR] to end FTP session and go back to UNIX

13) close [CR] to close the FTP site you're currently on, so that another site can be opened without having to set bin, hash, prompt etc. again.

- bin, hash, prompt will be turned on/off each time it's typed!
- Be sure to check if all modes are set correctly (especially 'bin')!
- stat [CR] or; status [CR] will show all modes and where you are connected.
- Most files are compressed. Use an appropriate program on your computer on which the programs were intended, or in UNIX .....
- uncompress [CR] if ".Z" file
- uudecode [CR] if ".uu" file
- very often, files are still compressed in another format after uncompressing .Z and/or .uu.
Use the appropriate decompression program for this.

- ls [CR] lists files (shows all files in current directory).
- pwd [CR] shows path. i.e. /pub/mirrors/umich/atari/utilities
- If down-loading several files with similar names use "*".
i.e. "mget *sys" [CR] (will get f.x.; datasys, lm23isys, xlinksys etc...) (ALL files with "sys" in their names)
i.e. "mget *.lzh" [CR] (will get f.x.; stest.lzh, dw3.lzh, xlba.lzh etc...) (ALL files ending with ".lzh")
i.e. "mget * [CR] (will get ALL files in the current directory!)
- If your computer doesn't have a disk drive you can "remote login" to another computer (use an other terminal's disk drive);
- rlogin {computer name} [CR]. i.e. "rlogin hnoss" [CR].
- You can now access the disk just as if it was on your own machine.
- eject [CR] to eject disk on disk-drives without "eject button"

TRANSFERRING FILES TO MS-DOS DISKS

Part of this is dependent on you having the GNU msdos-utilities available at your site. If you don't, ask your local system operator how to transfer files to/from MSDOS disks.

- mcopy {filename} a: [CR] i.e. mcopy microtcx.zoo a:
i.e. mcopy microtcx.zoo icone.lzh shblr.arc a:

- mdir [CR] to show disk-directory/space left.

- fdformat -d [CR] to format an MS-DOS 3.5" 1.44mMb disk ("-d" for MS-DOS)

- fdformat -l -d [CR] to format an MS-DOS 720Kb 3.5" disk ("-l" for "low density")

- mcopy a:{filename on disk} {copy filename} [CR] to get a file from disk to computer. i.e. "mcopy a:dlist.txt test1.zip"

- mdel a:{filename} [CR] to delete a file on disk. i.e. "mdel a:dslist.txt".

- eject [CR] to eject disks from disk-drives that don't have "eject buttons".

- -

From: johnmoon@pyromania.apana.org.au
Message-ID: <3kmmmm$6nt@eplet.mira.net.au>
Source record: 169097

Here is quite a neat trick to use on the net with Freeze Dried.
For a long time i've been annoyed when using the 'talk' command
and not being able to scroll any text upward with carriage returns.

If you change the terminal emulation on your UNIX sight to ansi, then
everything will work puuurrrrfectly. This also works for IRC as well!
The only problem is that the capture buffer tends to loose long lines
that dont have a carriage return (Big Deal).

There is quite a simple 'alias' command that you can place in either
your .cshrc or your .login file that makes this process quick and painless
when going fromn vt100 to ansi and back again.

```
alias ansi setenv TERM ansi
alias vt100 setenv TERM vt100
```

if you type ansi at the command line bingo you are in ansi term
and to got back to vt100 type vt100

Hope this helps some of you FREEZE DRIED fans out there.

Just so you know, there are thousands of MODs available on these charts in
/pub/aminet/mods
I've sent a few of mine there, and there are absolutely tons of varying
quality available there, categorized in various directories. I'd reccommend
getting the index file; some MODs are rated. ftp.wustl.edu is the head site
for Aminet.

So, is the Wizztronics MIDirack-casing + keyboard available now?
How much - where to order (preferably in Europe)?
What's the keyboard in it (PC?)?

>Q: What do I need to know about the RAM option?
>A: The RAM card supports from 1 Megabyte to 128 Megabyte of
> local RAM, (TT compatible). The only restriction placed on you,
> is all 8 banks of memory must be occupied by memory of

> giving you a total of 8 Megabyte of local RAM. 4 Megabyte
> SIMMs will give you 32 Megabyte, and 16 Megabyte SIMMs 128
> Megabyte.

It this RAM combined automatically WITH the internal RAM (Wings), or
do you have to tell which application use which?
BTW. This "fill all slots with same type" is downright silly, if
you get 8 1meg SIMMs and decide you need more: ONLY option is to sell
those and buy 4 4meg SIMMs and have 32 Megs of RAM.
What's the point of this?

> PRICES M.S.R.P.
>
>* Barracuda 040 from $800.00 US
>* 68040-33MHz Proc. Upgrade $150.00 US

What's this upgrade (is 68040LC-33MHz much slower?)?

>* RAM Expansion $300.00 US
>* 486DX-33 PC Emulator $400.00 US
>* Video Funnel $600.00 US
>* Video Editing System from $1500.00 US

Are these video expansions usable with Apex Media?

YES! I save my disk info(FAT, etc) to a diskinfo file on a floppy for every
partition, plus it also has Mirror, which you can set to run at every
boot up, I also save this to a floppy when I run it manually. Makes
recovering deleted files easier!

4858. Timer-A after DMA-play/record

Newsgroup: comp.sys.atari.st
Date: 1995-03-21 15:00:53 UTC
From: hitm@idefix.rz.tu-clausthal.de
Message-ID: <3kmpn5$ht4@ikarus.rz.tu-clausthal.de>
Source record: 168909

```
Hi!
I have a problem:
I want the timer-A to be executed AFTER playing or recording a buffer
( This is only a test, my real program makes more sense. )
First, the soundsystem is initiated, then a buffer is cleaned, to
see if something was recorded and aufnahme1() or aufnahme2() is executed
to start recording. In the interrupt, the variable laufe is cleared.
After calling aufnahme1/2() the program goes into a while-loop.
Here the variable laufe can also be cleared by pressing a key.
The interrupt is never called, often the system crashes.
Who can help me ?

The only way I've got this demo to work properlyy
is on a multisync monitor that does RGB mode as well as VGA
mode.The demo works fine with 3 megs of memory..
So what you need is for example a Microvitec monitor and
a RGB/VGA switch...

>Logic audio?

Logic is a fine program, but the Falcon is not well supported. Basically,
Cubase Audio will give better audio facilities on a Falcon, but I prefer
Logic to Cubase any day. Mail me if you want to chat some more.

|>
|> I've got the same Problem.
|> But where did you find the arrows?

Cannot remember where the arrows are, but the place to go now is the secret area
on level 1. (from the room with the chain - which must be pulled first.) Here there
are some more stairs, leading to the bit of level 2 which cannot be reached from the
other bit.

In the room with lots of chains (you know - lust / love / hate and that which it
creates etc.) on level 2 (?) what order do they have to be pulled in?

I successfully got through once, but randomly pulling the chains....

(BTW I actually reached the end of the tryware bit without saveing - still not got
it to work...wheres the patch?)

Cheers

Anthony

Here are some modsites:

ftp.brad.ac.uk /misc/mods
lysator.liu.se /pub/amiga/mods
geocub.greco-prog.fr /pub/incoming/amiga/mods
ftp.luth.se /pub/OS/amiga/mods
ftp.uni-kl.de /pub/amiga/wuarchive/mods
/pub/amiga/aminet/mods

/incoming/amiga/mods
ftp.germany.eu.net /pub/comp/amiga/mods
faramir.informatik.uni-oldenburg.de /pub/amiga/incoming/mods
cs.uwp.edu /pub/music/sounds/mods
/pub/music/lists/btl/mods
amiga.physik.unizh.ch /pub/aminet/mods
quepasa.cs.tu-berlin.de /pub/amiga/uni-kl/wuarchive/mods
/pub/amiga/uni-kl/uni-kl/mods
/pub/amiga/uni-kl/incoming/mods
/pub/amiga/uni-kl/aminet/mods
/pub/amiga/sound/modules
wuarchive.wustl.edu /systems/amiga/incoming/mods
/mirrors4/amiga.physik.unizh.ch/amiga/mods
switek.uni-muenster.de /pub/sounds/mods
rs3.hrz.th-darmstadt.de /pub/machines/amiga/aminet/mods
plaza.aarnet.edu.au /micros/amiga/incoming/mods
oes.orst.edu /pub/mirror/amiga.physik.unizh.ch/amiga/mods
nic.funet.fi /pub/amiga/audio/modules

I haven't tried them all, though...
It's hard to find good mods, simply because there are so many. Some
sites have Index files which lists all the files in the directory and often
state who made the music and if it's any good.

You could always E-mail me, and I'll recommend a few mods to you.
I have nearly 70 MB of mods on my HD at home you see...

Happy listening !

4866. MiNT and Geneva

Newsgroup: comp.sys.atari.st
Date: 1995-03-21 16:22:06 UTC
From: thopman@uoguelph.ca
Message-ID: <3kmufe$2oa@ccshst05.cs.uoguelph.ca>
Source record: 168908

Is it possible to get MiNT and Geneva to work together? I'm quite happy with my setup as it is now (ie TeraDesk/Geneva), but I'm thinking of installing X-Windows on my system (summer project) but I'd also like to be able to continue to use Geneva (not at the same time as X, obviously). I suppose I could survive going back to single-tasking GEM, but it's so, well, ugly and non-functional. I tried setting Geneva as the init program under MiNT, but that didn't work. Running Geneva and then MiNT from the auto folder make Geneva crash.

Any suggestions? If not, does anyone know if/when Gribnif plan to make MiNT and Geneva compatible? I seem to recall that it was originally part of the plan for Geneva, but I don't think anything's happened since the release 003 update.

Could be a problem with the new desktop, but there was a version of UPoint
with similar problems.

Get yourself an UPoint-update, and you'll probably be fine.

You could ask Stefan personally as well, too.

Bye.

>If so, how do you configure it for different capacities?

Atari drivers will work just fine. HDX and AHDI auto-detect drive sizes, no matter if these are IDE or SCSI. Some IDE drives have stupid or buggy firmware and won't work - I mentioned these in my previous post. Current models from Conner CFN series or Seagate 9xxxAG series work fine.

4872. Answers to Ghostscript Questions

Newsgroup: comp.sys.atari.st
Date: 1995-03-21 18:49:58 UTC
From: timg@ccwf.cc.utexas.edu
Message-ID: <3kn74m$qgt@geraldo.cc.utexas.edu>
Source record: 169098

In response to a few recent posts concerning Ghostscript ...

The latest Atari version is 3.12. The source and 68000 executable are
available through:

ftp://lifshitz.ph.utexas.edu/pub/atari/ghostscript/3.12 or
http://godel.ph.utexas.edu/Members/timg/gs/gs.html

gs312s.zoo source
gs312b.zoo binaries and minimal support files

The WWW site has lots of general information about GS, including a few
screen shots. If you have trouble gaining WWW or ftp access, send me
email.

The current fonts can be had from GNU distribution sites like

ftp://ftp.wisc.cs.edu

One person mistakenly stated that GS would not processes EPS files.
Perhaps the problem is that some EPS files do not include the "showpage"
operator. It is a simple matter to edit the file and add this, or to
type "showpage" at the GS> prompt after interpreting an EPS file.

>> I am looking for a program which will convert a PostScript file to
>> an IMG file. I have an idea that GhostScript may do this...

GS can convert PS to IMG and other bitmap formats.

>> Is it easy to install Ghostscript,

It is neither extremely simple nor very difficult. The difficulty you
have depends on your experience and your knowledge of environment
variable usage.

>.. I've been using GS.TTP version 2.5.2 with a shell called gemGS.prg

GemGs is obsolete, although I have had a couple of requests to update
it. Almost all of its functionality is now included in GS itself.

>Apparently GS can convert adobe type 1's, but I haven't worked out how yet.

If you have commercial or PD type-1 fonts, GS can use them. You have to
modify a file called "fontmap" which tells GS which disk files contain
which fonts. Further explanation is in the docs.

4874. Supra 14.4 express series modems and Atari computers?

Newsgroup: comp.sys.atari.st
Date: 1995-03-21 19:07:35 UTC
From: ai066@FreeNet.Carleton.CA
Message-ID: <D5t14n.CF7@freenet.carleton.ca>
Source record: 168922

I just looked at the Supra 14.4 express series modem (external IBM version). It was listed at Compucentre at $139 CA (A great price). In order to save money, Supra does not include an AC adapter. Instead, the modem gets its power directly from the DB 25 pin RS-232 port.

Q. Is the RS 232 port on the Atari putting out the same line voltage, on the same pin, as the IBM 25 pin RS 232 port? Will the Power supply on the Mega STE handle the extra load? And, when you convert a DB 25 to the smaller mac style RS 232 port (like on the Mega STE) with an adapter plug is the line voltage still available?

This modem looks like it could be a super deal, if it doesn't bloww Atari's RS 232 ports!

: installing X-Windows on my system (summer project) but I'd also like to
: be able to continue to use Geneva (not at the same time as X, obviously).
[further comments removed]

I am, at this very moment (OK, not quite this very moment <smile>) finishing release 004 of Geneva, to be released in May. One of the last things I'm working on right now is getting it to work with MiNT. We will be sending out newsletters and making a public announcement when it's ready.

4877. Re: Atari--->Mac or DOS

Newsgroup: comp.sys.atari.st

Source record: 168914

>What are some names of software which can be used to convert Atari text
> files to Mac or Dos, and where can one get this software? Thanks.

Edhak isn't too bad but it requires a lot of user input. Having
just subbed Atari World where 1/3 of contributors use Macs, 1/2 use
Ataris and I use a PC, I think I've seen the problems at first hand!

AFAIC cross-platform compatibility is a sick joke.

Regards
Andrew

```

```
Hydra is not for regular BBS use. It's a protocol for front-end Fido-type
mailers, such as BinkleyTerm and Semper. It's either built into your
front-end mailer or it's not. You don't use it as a stand-alone program.
```

4887. CD-ROMs for Falcon

Newsgroup: comp.sys.atari.st
Date: 1995-03-22 04:22:34 UTC
From: lamarth@delphi.com
Message-ID: <p037m9y.lamarth@delphi.com>
Source record: 168935

A small question....

Can ANY CD-ROM drive normally for use for PCs and/or Macs be used on the Falcon? Also, what about driver software- is there some commercial Atari software (or even any free/shareware) available?

Thanks...

David (lamarth@delphi.com)

4888. Fast Technology

4890. Sample Mixer for Falcon

Newsgroup: comp.sys.atari.st
Date: 1995-03-22 07:13:14 UTC
From: legrand@tesla.mbi.ucla.edu
Message-ID: <3koima$llk@saba.info.ucla.edu>
Source record: 168939

Hi guys, anybody out there have an opinion as to what the best sample mixer that runs on the falcon might be? It can exist within a mod tracker or outside of it. We'd prefer P/D but if it's commercial or shareware, that's fine too as long as we can get our hands on it fairly quickly...

Thanks in advance, replies by email, if anyone else is interested, request what I receive by email...

Scott

4891. Re: Atari SH204 HD formatting question

: Thanks in advance,

: E-mail addr. - faterioun%clipcva.dnet@delcoelect.com

Did you enter the specifications of the drive in the WINCAP file in the HDX
folder? In this file there is a short description of the format of the
information you have to put in this file. Note that lines beginning with #
are comments, so in the original version all specified drives are commented out.
Just add a line for your drive and it should show up in the menus of hdx.prg.
Also, you should make sure that the drive is configured to be drive 1.
This can be done with jumpers or dip-switches on the drive.
Then it must be possible to format it. Just recently I formatted a 65Mb
Fujitsu drive in a Megafile 30 this way and everything worked.
If you don't have the specs of your drive, look in the pub/msdos/utils/dskutl
directory on ftp.wustl.edu. There are a couple of files with the specs of
various hard drives.

Good luck,
Pim.

PS. your mail bounced so I had to post a followup.
Maybe you should check your mail address or something.

4892. Re: Falcon030: 80 columns at bootup?

Get yourself an older version of HDX. HDX 5.xx do no longer support
the old drives.

> I don't think you'll be able to use pc CD-ROMs with the emulator,
> especially games, as they require sound, (wich the emulator doesn't
> support) more than 16 cols. and higher speed.

I have been in touch with Compo Software, and according to them, a 386 and 486 model is still under development, but they had no idea when it they would be finished.

As for PC CD-ROMs, I will need some sort of a Windows driver written with the Falcon`s hardware in mind. It problably doesn't exist at the moment, but if the 486 emulator sells well, I would think that such a driver will be written.

> As for DTP I think most "good" DTP packages run i Winblows(tm)
> and therefore run eficciantly on the Falc. Why not use Calamus?

That's exactly what I want to do, to use Calamus and yet have access to PC CD-ROMs.

Hahaha :).
You know as well as I do that those programs which disables themselves
after a period are 5 minutes to crack and you are going to use it
without paying the fee (why anyone bother paying for it if he has the
full version?) Of course this is not peculiar for everybody.

As a programmer myself, I have bad experiences with shareware.
I am sure that I will spread only the demo version of the upcoming
object-oriented desktop I am developing.

I think the best way to spread any demo is to leave out
certain parts of code when compiling, in this way
it cannot be reverse engineered to revitalize the disabled parts.
This is the only possibility for programmers to avoid
reverse engineering.

> Thinking back, I don't think I used a single shareware that had significant
> options options disabled. If freedom had, for instance, shown a nag box

You can decide whether you pay shareware fee ONLY if we
(programmers) send you a full version without restrictions, Mr User, Sir?
Then you must be a politician.

Well, I have to agree with Peter. It is sad but _generally_ true.

Joseph, why are you using so strong words? If you paid the
shareware fees then the story is not about you.
Have you got any experience about the topic as a programmer?

Unfortunately I joined too late in this thread.
I'm looking for a way to distribute software which is
good for the users AND for the programmers.
If you have a thought, please share it with us.

There is a CPX or ACC with which you can change the NVRAM settings. The
40/80 columns is one of those.

In the big room through the locked doors stright in front of the door
that you come in. Unlock them with the key from one of the "mop-men".

What does it do? - well, it enables the secret door (I believe) in the
same room....

Scott,

what you need is a program called nvram (Im sure its a CPX actually).
It is on a.a.u.e I think. Its in german, but is pretty easy to
figure out :)

Just make note of _all_ the settings before you change any, in case
something goes wrong.

Cheers,
Dave

*** Jaguar System for sale ***

I still have an extra Jaguar System for sale. I bought it to play networked games, but they don't seem to be coming out very fast. So instead of sitting on it, I've decided to let somebody else enjoy it.

Here is what I have for sale:

Jaguar core system (RF box, controller, AC adapter)
Composite A/V Cable
Cybermorph

I have the boxes and manuals.

Price? $165 plus shipping/COD

Dom

>variables right from the desktop. What exactly is the problem here?

Curious... Edith Pro uses the AV protocol, but I never heard of an
AVSERVER variable. (but I do have an idea what it might contain:
either 'GEMINI ' or 'VENUS '). BTW, how does a classical Accessory
read an environment variable under out-of-box TOS 1.4?

As to the rest of the discussion: you win, time for me to take some
rest and do some actual work instead of waffling around.

>>I've got a few 100 new challenges on paper. I'll put this one in
>>the stack (at the bottom, though).

>Is that above or below the "challenge" of writing an entire TCP/IP suite
>for plain TOS? Any way you look at it, writing a user interface for an
>existing socket interface has got to be easier than writing both.

That's the exact point of the whole story. Easy writing is not the
important matter, it is writing something that is useful. Example: X
windows on an ST. Very nice, well done. But who's waiting for X on an
ST? TOS and GEM, that's what the ST is good at. Let's keep developing
applications for those systems; right now we have

single GEM,
MultiTOS,
Geneva,
MagiX,
MagiC,
Mint + X windows.

The only thing all those systems have in common is that they can all
run standard TTP programs. (I guess if the only program you use
frequently is Emacs, that is fine; but it also means you are an
elite hacker :-)

If the OS situation wasn't so desperate, I would still be writing for
the Atari series. Right now, to be entirely honest, I have sort of
given up.

Porting UNIX utilities is easy for programmers, but will only serve the
small minority that agrees with you that MiNT is a workable system.

You'll find many of you people here on this news group, but my investigations show that 80% of the people who would like to see a Web browser for the Atari are scared to death that it is going to require MiNT.

I wouldn't trust something written in assembler, really.
BTW, Edith Pro was written in C as well, it does (as far as I know)
quite a lot compared to 7up, and is 100K shorter. And I didn't
exactly write it to be as small as possible (although of course
I try to avoid ridiculous exstravaganza).

Don't ever count on seeing TOS 5.0. It probably will never happen. I know
the
folks at Atari aren't even working on TOS (and haven't in quite some
time) and
they don't know if they will ever get back to it.

Right now, the former TOS Group is busy putting the final touches on their
first game: HoverStrike. Look for it in a store near you soon! <grin>

4920. Teradesk w/ TOS 1.00...

Newsgroup: comp.sys.atari.st
Date: 1995-03-22 17:07:03 UTC
From: jws4p@fermi.clas.Virginia.EDU
Message-ID: <D5uq7r.EDD@murdoch.acc.Virginia.EDU>
Source record: 168889

Teradesk (v. 1.38-1.40) is not entirely compatible with TOS 1.00. The bug is occurs when you exit a program launched from Teradesk... a few bombs briefly flash on the screen and then the computer returns to the inferior GEM desktop instead of the Tera desktop. My question is: Does anybody know of a patch to fix this? I'm not an ST programmer myself but I had an idea... the program Resound traps whatever system vector is called when a program is exited and uses this as the cue to play a digital sound identified in the resound.inf file. Would it be easy for someone to modify a program like Resound so that instead of playing a sample it would run a another program identified in an .inf file? (namely Teradesk)

Thanks,
John

Help! Mr Karaboudjan has been murdered and I cannot find the culprit!

The game is CRUISE FOR A CORPSE (I know it's an old one, but...) the time is 10.20am, and I am stuck. All the suspects have been questioned as far as possible and I have tried every possible action I can with the items in my possession. There are very few items I can pick up to mess around with. How do I find the tools? How do I feed the cat?

If you don't help the murderer will surely escape justice and may strike again.

Hints and tips would be appreciated.

From the Holy Book of <avg.795885220@news.cwi.nl>
as spake by avg@cwi.nl (Annius Groenink) :

>Curious... Edith Pro uses the AV protocol, but I never heard of an
>AVSERVER variable. (but I do have an idea what it might contain:
>either 'GEMINI ' or 'VENUS ').

I read about it in the Thing docs, with reference to accs like ParaFin.
It may be, for instance, that since accessories are in a sense ``second
class citizens'', they can't do AV things on their own and so have to
ask someone else -- namely the AV server -- to do it for them. That
would explain why you as an app writer wouldn't have had to use it.
[This is, of course, rank speculation.]

> BTW, how does a classical Accessory
>read an environment variable under out-of-box TOS 1.4?

Using getenv(), I'd assume.

>Porting UNIX utilities is easy for programmers, but will only serve the
>small minority that agrees with you that MiNT is a workable system.
>You'll find many of you people here on this news group, but my

But it very well might.

And why exactly are they scared? Have you been telling them horror
stories again? ;) Seriously, though, if we knew what their problems
were, we might be able to fix them. For instance, would a lot of this
problem go away if Simon were to update the MDK? No-fuss point-n-click
installation of MiNT and the MinixFS, maybe add a section for MiNTnet
installation? How far would that go toward eliminating the fears of
your 80%?

>(and will have disks available with everything you need to get
>started). I'm hoping to be at that seminar, so I'll try to get
>details on that, too.

Yeah, that would be me. I should clear up a few things here:
Xmosaic runs from a UNIX system and uses the my X display at home over
a PPP connection - this can be done with any ST and Mint-X because the
actually memory needed and processing power are REMOTE. It takes very
little of your own RAM. (<100k) The only issue here is that
you have a system you can dial into that runs Xmosaic. A local web
browser called Chimera is working with Mint-X. I am in the process
of fixing a few bugs on the Atari port. The difference here is that
you need local RAM and processing power to run it - the nice thing
is that you don't need to be connected to a system that runs Xmosaic.

I often run both side by side to compare speed - here are my conclusions:

Xmosaic takes a little time to start up from a remote host (it querys
your X server, etc etc) but once it's running it is very quick with
14.4. The real advantage is that the data connection between my school
host and the outside internet is MUCH faster than my 14.4 modem so the
ridiculous amounts of data from a site come in VERY fast and are dithered
by my school's host computer. WHat gets sent over my modem is the
bitmap left over after all is said and done. This makes Xmosaic the
faster way to browse the web.

Chimera is nice for displaying stuff you're writing (since it's local
and you don't actually have to be connected). It is also nice for
saving undithered full colored pictures or html source because it
is local. Performance is slower (in general) because all the data
from a site has to come over my 14.4 modem. Dithering, etc are quick on
my TT so that is not really an issue. So far Mint-X only supports
monochrome but these programs will work with color once supported.
WHen color works, Xmosaic will be a lot slower because a lot more
data will have to be sent over the modem. Chimera will keep the
same performance level it has now.

Note: nobody has ported Xmosaic locally for Mint-X, and not because
it can't be done, it's just that it requires the Motif libraries
which are a commercial product and requires a hefty licence fee for
the lucky person who want to compile it. Chimera does all the same
stuff but it absolutely free.

Sam

> If the Mausnet guy won't believe that, then tell him to take a
>look at the March 1995 issue of .net, page 71, which tells of what's
>available for the Atari currently, and of the two WWW browsers in

(Craig.Graham@ncl.ac.uk):

s5>:Cr: Craig (lost in the Tower, and getting ready to pay for the rest
s5>:Cr: of the game).

s5>I've got the same Problem.
s5>But where did you find the arrows?

Hey, this is one helluva game! I've managed to reach the point now
where I need the passwords if I want to go any further. So I've
completed all three levels now, and by the looks of it, there are 10
more to go. This is great programming! Never seen anything like it on
a Falcon, I want more! :-) So I would like to contact the people who
programmed this gem. I live in Holland, so I'm not quite sure how to
go about ordering the manual. Are there any dealers of this game in
Holland?
The attention to detail in this game is incredible really, even the
sound is great, true stereo, whenever someone is approaching you from
the left, you actually hear footsteps in your left speaker! So if you
stand still and you hear nothing, then there's nobody in the room
with you. I like things like that! The pace of the game is wonderful.
So far however the puzzles have not been too difficult, hopefully that
will change in the higher levels. But then again, I used to play Dungeon
Master a LOT :-)
I would like to fully support the people who programmed this game,
keep up the good work! Also, this is a great way of advertising a
game! Not some stupid demo where you can only walk about for a bit,
shoot a few guys and return to desktop. With this game you can play
for hours and after that you really WANT to order the passwords :-)
It's the same with this new pinball game called OBSESSION, the first
level of this game came free with the ST FORMAT disk. Great game as
well! And the complete first level to play with! Made me addicted for
life :-) I say cheer tryware!

Are there any other games like Towers II around?

>would it be unwise to un hook the fan or open (cut up case) .thanks Dick
>email af366@cfn.cs.dal.ca

I have a 4 meg Falcon with an 85 meg internal HD sans fan. My Falcon
flakes out after relatively brief up time. Having an external HD would
probably reduce the internal heat significantly but the additional RAM
would offset that in my mind.

Try unplugging your fan and see what happens (I'd be interested in
knowing). The only problem I run into when my F030 overheats is with
the I/O ... it can't read or write. But I have never lost a file.

Being a Atari user since 1985 I switched to Mac two years ago. However, I have some software (especially a very good LOGO-implementation dating from 1988) which I am still using - the only reason not to sell my old Mega/STE.

Are there any experiences with the Atari-Emulator? According to computer magazines the performance must be great, but before buying it I must be shure whether my beloved (and heavily used) xLOGO would work.

If someone could do me a favor, I would send him/her my LOGO-interpreter and would be happy if this person could see whether it runs.

Please reply be email.

Hello all,
Does anyone have a version of NOS for the ST that works (for packet radio)?
I grabbed a copy from atari.archive.umich.edu a while back and it exits
back to the OS when a packet is received. I'm hoping I don't need to
debug the version I have. Please email responses as I don't get on this
group much.

: release 004 of Geneva, to be released in May. One of the last things I'm
: working on right now is getting it to work with MiNT. We will be sending out
: newsletters and making a public announcement when it's ready.
Great stuff...it it too late to ask for extra goodies? How about a
non-modal fileselector? A faster GenevaTOS? A wider (and non-modal)
dialog box when entering parameters when lauching a program from
GenevaTOS? The ability to pass parameters to .TTP's and .GTP's from
Geneva Manager? I'm sure I can think of more, but even these would
enhance the functionality of an already excellent piece of software.

S > colour system, but the display quality is not as good on a
S > mono monitor.

though it's true that you get the most mileage out of GEMview on
a colour system, even in monochrome it has some great use as well. I
use it to convert colour graphics files to monochrome .IMG files for
use within Calamus (I halftone the graphic first so that I can get
the best resolution from it using my Canon BJ5 BubbleJet printer).
Works GREAT on Kodak PhotoCD files from the Corel Stock Photo Image
CDs.

We do agree though on the usefulness of mgif for actually
viewing .GIFs (and JPEGS) on our colour-deprived systems :)

Sure. You can wait and hope for a web brower. But why wait? With Spectre GCR you have access to Macintosh software to browse the 'net, not to mention a ton of other software. It even runs Prodigy for Macintosh! I have a Spectre GCR with ROMs and version 3.0 of the software and all original boxes and documentation. System/Finder is available on most major BBS's, but if you want, I can include this as well, in Spectre formant. Toad lists this product for $349. I will sell it for $150.00, including shipping! [Extra if you want registered/insured/C.O.D.] Send e-mail if interested to gaglenn@ix.netcom.com.

Don't you mean 1200 dpi?

The GT6000 series are 600 dpi interpolated to 1200 dpi
The GT8000 " are 800 dpi " to 1600 dpi

I haven't actually got GT-LOOK II yet.

I just downloaded it from there via netscape and my zoo decoders for windows and an Atari TT couldn't decode it.

Although it seemed to arrive without a problem, could it be a transmission fault and should I try again?

> One person mistakenly stated that GS would not processes EPS files.

Well I did have a problem...

> Perhaps the problem is that some EPS files do not include the "showpage"
> operator. It is a simple matter to edit the file and add this, or to
> type "showpage" at the GS> prompt after interpreting an EPS file.

That has done the trick on the test files I was using exported from Coral draw.

> GemGs is obsolete, although I have had a couple of requests to update
> it. Almost all of its functionality is now included in GS itself.

It does seem to be, though using the shell helped me learn about using ghostscript itself and I'd only recently discovered the 2.61 version let alone 3.12.

Can I also just say thank you for the work you're putting into Atari ghostscript.

4947. Speed of Light: Is Stu out there?

Newsgroup: comp.sys.atari.st
Date: 1995-03-23 03:12:54 UTC
From: Jay T Millar <jmillar@delphi.com>
Message-ID: <Ro443QG.jmillar@delphi.com>
Source record: 168817

I guess I'm posting this to the net since I figure others might be
asking the same question so here goes:

Is Stuart Denman (sp?) still actively developing Speed of Light? I have
the 3.5 registered version, but was wondering if he was still working
on any improvements.

Also, he makes mention of a desktop picture program he is developing
in his documentation. I would really like to register this program
for my Falcon if it works well (and he's developed it). Anyone
else interested in such a program?

Thanks for any info!

From: zrollinso@cc.curtin.edu.au
Message-ID: <1995Mar23.123056@cc.curtin.edu.au>
Source record: 168840

Can anybody tell me what is involved in a TOS upgrade?

Currently I think I have version 1.4 (or it might be earlier - I can't drag files onto applications to execute etc so whatever I have is before that feature was introduced).

What is the best version to upgrade to and how difficult/expensive is it? Or is upgrading to a new version of TOS a waste of time.

I have a 520 STe with 4Meg of ram and AddSCSI+ adapter with several HD's and tape backup (if that makes any difference).

Message-ID: <D5vKzy.JDE@sdf.saomai.org>
Source record: 168861
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I'm looking for people who have experience with the Gemulator. I'm thinking of getting one - no I'm not gonna buy an 80x86 - I just want to have a decent operating system at work :-) How fast is it compared to my 16Mhz STe when run on a 486/33 ? How well does it utilize modems and hard disks? Can serial communicatios keep up at 19200 (or 38400?). Can existing DOS/FAT partitions be used?

I'm thinking of running it in an OS/2 full-screen session. OS/2 is OK, but it thrashes the disks too much, and seems a bit slow, and the apps that come in the bobus pack really suck, and I can crash OS/2 pretty easily just by doing alot of multitasking.

Any comments appreciated.

>Could someone fill me in about this Janus St emulator for the PC? I've been
>seeing some traffic about it. I've never heard of it.

Hi William !

The Janus board is a hardware expansion card for PC's. It fits in a ISA-Slot
and has an 68000 with 16 Mhz built in. Also built on the card is ROM-Tos 2.06
and slots for SIMMS up to 32 MB. The 68000 can't use the memory from the PC
cause of the slowlyness of the ISA-Bus. You can use the normal equipment
of the PC, graphic-cards up to 1280*960 with at the moment 16 colors.
True color and a other processor is under development. Their exists two
operation modes. In the dual mode, graphics and file operation is done by
the PC-Processor, so the performance is higher than in Local-Mode, where
all is done by the 68000 (but this mode is more compatible).
Hope that will help you.

Can't remember where the arrows are but there are lots available later on.
You want to go through the secret wall where you pull the chain on level 1
to progress.

>In the room with lots of chains (you know - lust / love / hate and that which
>it
>creates etc.) on level 2 (?) what order do they have to be pulled in?
>
>I successfully got through once, but randomly pulling the chains....

These create a poem and should be arranged in the order that sounds correct.
A clue is the first one is lust and you don't pull the reset chain. I've found
however even with the correct combination the door sometimes says it's still
locked, in which case you have to reset the chains and do it again.

If your really stuck mail me for the correct combination, I don't want to post
it here to spoil it for others.

I've know progressed through to the room where it says "NOW DIE". I have found
a secret wall on this level but there wasn't much else. Any help on what to
do now would be appreciated.

Hi,

In article <3kitc9$fna@cville-srv.wam.umd.edu>, abstract@wam.umd.edu says...
> I have a program which says that it needs PowerDOS to run. Is
>this something to do with multitasking? - I don't have Geneva or

Yep. Powerdos is a multitasking kernel (like mint) but smaller and faster I used it a while as diskaccelerator. Installing is quite easy. You can get it at atari.umich,edu (or one of its mirrors).

Maybe they were created on a Unix or Vax system with longer filenames.
When I copy files from our Vax to a PC, as long as the extension is 3 letters
or less, the PC will take the file, but ignore the characters after the eigth.
This doen't help you at all, but it might give you an idea.

> files to Mac or Dos, and where can one get this software? Thanks.

If by text files you mean plain ASCII, then this is a non-problem; just
copy the files.

If your files are in a format for some specific Atari word processor and
you need to convert them to e.g. Word Perfect or MS Word format than that's
another question, and one that needs more specifics before an answer can be
given.

Atari, no. But only recently (as in: last month) you could order your
ATW at Atari Club Nederland, for only DFl 599 (about $375, with todays
flaky dollar-rate), another 599 for a farmcard with 4 T800's on it,
and another 599 for the Mega ST I/O card.

Dunno.

>2. What is the processor upgrade path? Is it as simple a dropping a faster

There is a 48MHz speedup board available from Cyrel/Cybercube. I
haven't heard of any 040 upgrades being available on *any* Atari.

>3. What about memory? Are they SIMMS? How much ST memory can I put in?

Don't bother with ST RAM -- it is slow and limited to 4Mb. You need a
TT-RAM board, and different boards allow different types of SIMM etc
to be installed. The MegTT board which I have has 8 slots, allowing up
to 128Mb of TT-RAM. You need 70ns or better SIMMs.

>4. FPU support?

It has a 68882. Do you mean which apps support a maths copro? Not many
:-(although most raytrace-type software tends to.

In article <5gyaGsW.robo28@delphi.com>, Rob <robo28@delphi.com> writes:

] Well I got the drive for $80 and I called Toad computers to see about
] mounting hardware.. During this call I found out that the internal HD is
] a 2.5" device (usually used in laptops) and the one I bought was a 3.5"!!!
] Well after a lot of searching I found a converter cable that would
] allow me to hook it up (the 2.5" has 44pins, and the 3.5" has 40, the extra
] pins are for power) it was only $10. I hooked the drive into an external
] case, carved a hole in the back of the Falcon for the cable, hooked
] the drive to the external powersupply and formatted it and it worked!!

I had the same problem. I've got a 200Mb 3.5" hard drive from a PC
and I was intending to fir it in my Falcon (until I got the Falcon and
opened it up!). I eventually bought an 85Mb 2.5", but I intend to fit the
200Mb one. The Power supply PCB next to the hard drive seems very large for
the (relatively) small currents it is supplying. I intend to remove this and
build my own card using IC voltage regulators (probably not used in the
Falcon due to cost, but as a one-off it doesn't matter). This could be much
smaller, and could have the four way power lead to feed to the 3.5" drive.

I will report on my success (or failure) when I do it, but I've still
got a couple of months warranty left so it's staying like it is for the
moment!

4974. List of VGA monitors/Which work?

Newsgroup: comp.sys.atari.st
Date: 1995-03-23 14:57:14 UTC
From: troyc@bnr.ca
Message-ID: <3ks28a$sdr@batph8.bnr.ca>
Source record: 168820

Hello. I have a list of VGA monitors I can buy, but I am not sure which
of these will work with my TT computer. Can anyone please help me know which
of these will work and which of the list would be the best to get.

Please, if you know for sure, let me know. I need to get a monitor YESTERDAY!

Here's the list:

- VGA COMPAQ Video Graphic COLOR Monitor, model 420
very good working and cosmetic conditions, 14"

- VGA COMPAQ Video Graphic COLOR Monitor, mode 420T
very good working and cosmetic conditions, 14"

- VGA MITSUBA COLOR Monitor, model 710V, 14"
looks the same as the previous one
except it is a VGA

- NEC MutiSync COLOR Monitor, 14",
in great working and cosmetic conditions

- NEC MultiSync II COLOR Monitor, 14"
in great working and cosmetic conditions

- NEC MultiSync II COLOR Monitor, 14"
in great working condition, the enclosure
box has a small crack in the upper rear,
hardly noticeable,

- NEC MultiSync Plus, COLOR Monitor, 14"
in great working and cosmetic conditions
(these are very nice)
This monitor has also ANALOG input.

- Zenith VGA COLOR Monitor, 14", model ZCM-1490
very good cosmetic and working conditions.
Flat Screen, these are unique, they look
different, they are very desired.

- RELISYS VGA COLOR Monitor, 14", model RE9514
in great cosmetic and working conditions.
it works with 120V and 240V, 50/60 Hz
(suitable for domestic or foreign use)

Thanks

Alfred,
When you say that one can use GDOS drivers with the new NVDI does this mean I could use a SpeedoGDOS printer driver? This would be ideal as printing with my Canon works great with Speedo but not with NVDI (3.01).

> characters and I have tried everything I can possibly think of!
> Has anyone got any hints to help me out of this? How do I feed the
> cat? Where do I find tools ?

You don't have to feed the cat. You will find a tool much later in
the game. The next thing you need to do is finding the invitations.
The invitations are in the dining room, but they are not always there.
It's a matter of timing. It tried many times before I really found them.
Try taking only the note of Fabiani and leave the bracelet with the clasp
where it is. Then go to the diningroom. Fabiani has just left the diningroom,
so the invitations must be there. If youtake a look at the bracelet first,
time will go 10 minutes further and the invitations are gone.
I hope this helps a bit. It is a very frustrating game.

On a whim - ignoring the stupendous costs that a call from Germany
to the U.S. entails - I called Wizztronics for some information
about the Barracuda board:

Here's the news as of 23.Mar 17:50 MEZ/CET:

The board is going into production next week. The board design is
finished they're waiting for some logic chips by suppliers. It'll
take 4-6 weeks for the production of the things, so I figured
early May the soonest and he agreed. The bad news is that apparently
200 other people (ROT13: lbh shpxref! :) have already ordered the board
before me!

Argh

Retail price is: $950 with the real 040.

Nat!

> Is it true that the 56001 DSP can execute 3 threads of execution
> simultaneously? I heard that the DSP has an average instruction
> execution time of 1 cycle - does this take into consideration the
> 3 execution threads, or can I actually get 3 instructions per cycle
> by using 3 different execution threads?

The 56001 can under certain circumstances execute 3 instructions
simultainously and that is when you want to:

<multiply>, <add the result to previous result>, <load the next data>

It will add 2 clocks to your execution time (and its running at 32mhz)

Most (All?) DSP's can do this. It's the stuff digital signal processing
algorithms are made of.

There is even hardware control for loops (so you wont have to increment some
silly counter and test its value, the chip will do this for you.)

4991. Falcon, memory cards, apex media

Newsgroup: comp.sys.atari.st
Date: 1995-03-23 22:04:41 UTC
From: macdonald@cfcsc.dnd.ca
Message-ID: <macdonald.202.0011147C@cfcsc.dnd.ca>
Source record: 168833

I am hunting around for some info on the falcon. could anyone tell me what
add-on boards would be availbale too me? I plan to do video and graphics/DTP
work mainly, so what memory boards are availbale? - accelerator boards/fixes?
- video boards(overscan?, higher res?...)
I've heard mention a few times Apex Media in the graphics/video? context. whta
the heck is this program? what do i need to run it? does anyone have info on
this program.
also someone from lexicor contacted me about DAs programs, all my mail was
deleted so I can't reply, but I'd also like to know about phoenix2.
thanks in advance for any and all help
have a happy
-ken

4992. Atari Games

Newsgroup: comp.sys.atari.st
Date: 1995-03-23 22:07:09 UTC
From: preeti@easynet.co.uk
Message-ID: <3ksa62$gtc@master.easynet.co.uk>

I after working copies of the following Atari games:

Pong; Paddles; Tennis

Has anyone got these?

Or do you have any other old Atari games maybe from 5 or so years ago or even older than that?

I need any of these you may have for Monday.

Thanks in advance....

>current e-mail address would be great. Thanks in advance!

I do sugest that if you want a Real boot manager go and Buy X-Boot, I think
this is the best there is....

Far Far better than any PD stuff that I have seen, and has a nice Gem
interface...

Puff ;)

>BTW, Edith Pro was written in C as well, it does (as far as I know)
>quite a lot compared to 7up, and is 100K shorter. And I didn't

That's true, Edith's feature list is larger than 7up's, although the
gap has closed somewhat with the latest release of 7up. Also, 7up is
significantly faster to use than Edith on my f030 4/32Mhz.

Horses for courses.....

BTW. the latest version of 7up still has a bug in it's text select/copy
routines - if you use CTRL+SHIFT+CURSOR to select some text, then hit
CTRL+C to copy it, the text is deleted & not put onto the clipboard.

If the block was selected with the mouse, this doesn't happen, or if the
copy icon is selected instead of using CTRL+C.

I did report this bug, but it's not got fixed yet :(

Craig.

General Peripheral Interconnect Bus (IEE488.1) also reffered to as HPIB (Hewlett Packard Interconnect Bus). It's usually used for connecting up automated test gear. Most modern logic analysers & digital scopes have this interface. I don't think there is one for the atari, but designing one would be very simple (I designed one to bolt onto an 8031 microcontroller last summer, and that was straightforward).

There are also several little programs to change rez that can be run right before your boot program and don't mess with the "protected" nvram settings. I don't know the names fo any off-hand because I wrote my own in about 5 seconds and just use that...

>Gemini and Thing (my favorite) are very good ones and natively in
>german...

Isn't the next version of Geneva expected to replace the AES completely
and to run under MiNT? If so, someone might consider it a nice MTOS/MagiC
replacement.

About desktops: NeoDesk 4.0 has been tested by ST Computer in issue
3/95, as have Thing 0.24, no|Desktop 3.0, Ease 3.5 and Gemini 1.999e.
They all are available in German, yet Neodesk and Thing didn't get the
article author's sympathy due to crashes (both), redraw bugs (NeoDesk) and
the lack of a console window (NeoDesk).

4999. Starball sound effects?

Newsgroup: comp.sys.atari.st
Date: 1995-03-24 01:55:35 UTC
From: avocado@u.washington.edu
Message-ID: <3kt8qn$qfj@nntp3.u.washington.edu>
Source record: 168839

I just downloaded a copy of starball. It doesn't seem to include the sound effects file, though (STARBLFX.ZIP), so I assumed I'd have to download that separately. After a concerted search of the ftp site at umich, I can't seem to find it. I tried several other sites as well, and can't find it. On the off chance that the university of michigan had a defective copy, I downloaded another copy of the game from a different site, but that didn't include the FX file either. Could someone tell me where to find the file, please?

5001. Some good Atari news

Newsgroup: comp.sys.atari.st
Date: 1995-03-24 05:14:20 UTC
From: markvanwyk@aol.com
Message-ID: <3ktkfc$jek@newsbf02.news.aol.com>
Source record: 168844

ST computer weenies - don't flame me. I'm about to post something about the Jaguar, but this is also about Atari, so it's related:
San Francisco Chronicle, March 23, Business Section, page B2: "3 NEW GAMES FOR ATARI" - "Acclaim Entertainment Inc. said it will alter three of its popular video games for Atari Corp.'s powerful Jaguar game system. The games are: NBA Jam TE; Fran Thomas 'Big Hurt/ baseball, both to be released later this year. Another title, to be disclosed later, will be marketed in early 1996."
Why is this significant, you ask? Because that means that finally, a reputable game software company is writing for the Jaguar, and therefore Atari has a better than even chance of surviving.

I don't know much about X10 controlers, but your post reminded me of a
program that once came with START magazine. My old issues are in
storage, but I just looked through the disks and found this: X10CTRL.ARC
on the February 1990 disk (vol.4 num.7). If I remember things correctly,
this was some kind of do it yourself project that allowed the computer to
control lights and/or appliances in the home. Hope this helps.

From: zap@eskimo.com
Message-ID: <D5xpwp.7s3@eskimo.com>
Source record: 168847

I haven't seen X-Boot. What I need to do is set up preconfigured
boot setups that I can run after a warm reset by simply pressing an F key or
other key combination. I have Geneva and NeoDesk4 and some of my programs do
not like Geneva and some do not like Warp9. I need to disable these programs
and preload certain auto programs and accessories depending on the
application I want to run. I have an STE w Tos 1.06 and 4 megs. Will X-Boot
do this for me? If so, how much will it cost? Thanks for any info. I still
haven't heard back from Mr.Moore so I am still open to suggestions.

5009. RGB to VGA ?

Newsgroup: comp.sys.atari.st
Date: 1995-03-24 08:28:38 UTC
From: markuss@power.techem.ruhr-uni-bochum.de
Message-ID: <3ktvrn$o37@rubb.rz.ruhr-uni-bochum.de>
Source record: 168751

Hi all !

I want to know, if there exists an adapter to connect RGB to VGA.
I know, that there must be some electronic inside because RGB has horizontally
frequencies around 15kHz and VGA-Monitors have above 30 kHz (I'm talking about
Multiscan-Monitors). For example there exists a card for the PC's to watch
TV on VGA-monitors, which is connected between the graphicscard and the
monitor. These card only allows to watch TV and nothing other at the same time.
So it is possible to transfer pictures with low frequencies to higher ones.
My question now is, does somebody know such an adapter or has a plan to build
one ?

Bye,

j> They are only interested in MAC & PC. and nothing else.
j>
j> FUCKIN' PRICKS!!!!

Holy hooters ! :-) Well I've got the latest version of Logic Audio
(beta) and Cubase Audio 2.03 and I personally prefer Cubase Audio for
a couple of reasons. To begin with Logic is fine, but the audio handling
is so much more advanced on CAF. I have *not* had the serious bug problems
some people complain about and simply need the FDI and FA8 (Falcon Analog
Eight) support that's in CAF because I couldn't do what I do without 'em.
I work professionally (producing music) with it and though CAF's
clearly not ProTools or another top of the line system it *works*
very well if you "tune yourself in" to the system.
On the program interface side you have to pick your choice between
Logic and CAF. Emagic pinched the linear graphic handlning from
Cubase - Good on them ! So it's up to you... I like all the
"finger"-choices on Cubase as well. midi handling is great AND
.......Steinberg keeps supporting the program. Important, yes ?

Memory boards there are plenty, graphics boards for the Falcon there is only the
NOVA Graphics Board for Falcon (W32), otherwise you can use something like
blowup to increase your graphic resolution.

>I've heard mention a few times Apex Media in the graphics/video? context. whta

Apex Media in the USA is available via Lexicor Software, a falcon only
package it is a graphics animation (2D) studio. 4 megs on falcon and it
runs with outside as well.

On a slightly different note, I am working on a HTML->ST-Guide converter,
something which won't quite be as graphical than the others, but will
be to some extent. I would use it mainly for checking HTML before I
take it over to the Sparc.

PS It's not *quite* ready yet. I think the summer exams'll delay it
a bit...

Anyway, tata, Leon.

Help! Mr Karaboudjan has been murdered and I cannot find the culprit!

The game is CRUISE FOR A CORPSE (I know it's an old one, but...) the time is 10.20am, and I am stuck. All the suspects have been questioned as far as possible and I have tried every possible action I can with the items in my possession. There are very few items I can pick up to mess around with. How do I find the tools? How do I feed the cat?

If you don't help the murderer will surely escape justice and may strike again.

Hints and tips would be appreciated.

5022. Opinions Wanted on Dot Pitch

Newsgroup: comp.sys.atari.st
Date: 1995-03-24 15:35:18 UTC
From: troyc@bnr.ca
Message-ID: <3kuorm$673@batph8.bnr.ca>
Source record: 168773

Hi. I have a question about dot pitch.

I know that the smaller the dot pitch, the better. I don't have a question about that. What I do want to know is this:

On a 14" monitor, is a dot pitch of .31 OK? On a larger monitor this would be fine, but how is that for a 14"?

Those of you that have seen the difference side by side, obviously the .28 would look better, but is the .31 still acceptable?

I am asking this becuase I can get a NEC Multisync II monitor, which NEC tells me is .31 dot pitch, for $85. Don't want to settle for that if .31 will be so bad I will want a new one in a few months...but don't want to pass it up if .31 is acceptable.

Thanks

From: ai066@FreeNet.Carleton.CA
Message-ID: <D5yBJ7.C40@freenet.carleton.ca>
Source record: 168767

I recently bought a used copy of BAT, including the mv-16 sound card. It had a virus on disk one. I killed the virus with UVK, and the rpogram seems to run OK. I just can't seem to get the character creation part of the game running. I'm using a mega Ste, 4 megs ram, TOS 2.05.

When I try to run the game by clicking on BAT.PRG, I can't get the scrolling text to stop, even when I puch the left mouse button, like it says in the manual. If I run CREATE.PRG, then I get the same intro screen, that I can't get out of. If I run GAME.PRG, I go to the first game screen, and can play, but I have to use the defualt character.

Thanks!

Thanks for the TOS update, John. After reading your reply, it dawned on me
that you might take rightful offense to my offhand comment about 'sloppy
code in TOS' and I wanted to publicly apologize and explain that comment.

What I meant was that for _any_ bit of code, there are bits and pieces
which may not be constructed in an 'optimal' fashion. Many corporations
do no like making their internal source code public only because of the
pundits out there who will loudly proclaim "I could do better than that!"
You know this of course; I just wanted to make sure all others do too. No
malice was intended towards the 'TOS God' or any of his former minions. :)

Not true. AHDI 6.061 supports the old drives like it was written
only for them. AHDI 6.06, took forever to figure out that it was an
old drive, and AHDI 6.061, as far as I can tell has only two extra
features - 1) it'll keep from corrupting the drive on a Falcon if the
partition is filled up at some point or other, and 2) speed up the
identification sequence for older hard drives. I know this, since I
use it on both my Falcon and the Mega ST I use at work for, well,
work. I also formatted the drives for both machines.

> AFAIC cross-platform compatibility is a sick joke.

While cross-platform compatibility between the Atari and anything else is often quite difficult if not impossible, great strides are being made elsewhere in the computing world.

I hate to sing praises to Microsoft, but I'l grudgingly give them credit when credit is due... Previous versions of Microsoft Word and Excel for both the Mac and Windows versions had the ability to save a file in the native format for the -other- machine. Nice. The latest versions of Word and Excel now offer 100% Mac/Win compatibility. There is no conversion process involved. A saved file from either machine can be read and then immediately used on the other.

I still hate these new apps because of their lethargy and bloatedness, but all in all, it's a step in the right direction, IMHO.

I strongly suggest that you get a new O/S. And preferably MagiC. But if not, TOS 2.06 or 1.4 would be a good start.

The beauty with MagiC is that you get a complete new O/S without any of the old bugs, as well as faster screen/printer/etc. code. And on top of all this you can multitask.

Steve Taylor.

I posted the original article about watching out for cdrom called Wallpaper because, although it sounded good on the jacket, there were duplicate file names found when opening the folders. Of course then the files could not be viewed.

I received a note from Roger Burrows saying that earlier versions of Extendos and Extendos Pro exhibited this behavior as an extension of the ISO 9660 specs that weren't being allowed for. The problem is fixed in ExtenDOS v1.22 (out now) and ExtenDOS Pro v2.1 (out Real Soon Now).

(BOBr was right - IBM too would have had fits with identically named files.)

Roger, Thanks for clearing up the mystery. I really like what I have been able to do on my Atari with CD-ROMs and your software has been a great contributor to that pleasure. Wayne

Will the disks be redistributable (the ones without free commercial
programs, that is) or subject to a compilation copyright? If they have
enough credibility, perhaps they could become the Atari equivalent of
the Fred Fish disks.

I have both an STE and a Jaguar, so I'm looking forward to this mag.
I hope it lives up to all the hype!

5034. MagicMac Questions

Newsgroup: comp.sys.atari.st
Date: 1995-03-24 20:45:52 UTC
From: renfro@bnr.ca
Message-ID: <3kvb20$m4a@crchh610.bnr.ca>
Source record: 168779

Greetings,

I have been experimenting with MagicMac on a MacIIci and the little I have done is pretty nice (considering the machine I am using). Though I can't read German, it wasn't dificult to set it up. However, I don't have a clue what to do with Ease once I have it running. I can launch other applications to test them out, but I don't know how to configure the Ease desktop.

As a result I tried to get it to work with NeoDesk4 and did have some limited success. Problems included two copies of NeoDesk running when I configured the MAGX.INF file to run NeoDesk as the shell. Also when trying to launch an application I would get some kind of error, but the app would run anyway. So far, I have only tried to run a few apps and I am testing with the demo of MagicMac, of course.

So my questions are: Is there going to be an English version of MagicMac? How soon or long till an English version will be available from someone like Toad? Are the Neodesk problmes due to MagicMac or Neodesk and are there any plans to fix them? Am I doing something wrong resulting in the problems with NeoDesk? Okay, that's it for now.

Any answers or suggestions are welcome.

Thanks,
Randy

Why is it always Germans or Frenchmen who are complaining about this? :-)
Just wondering... Is it because Germans and Frenchmen have quite a
strong culture, and that would be reason why they haven't 'adapted'
to english?
I'm Finnish and have no objections to English being somesort of
general language. I hear english everyday from TV, music etc.
I think in German they overdubb US and UK Tv-series and
films to their own language. Do they do that way also in France?
In Finland all films and TV-series are shown with their original
language, and Finnish translation can be read from the bottom.
Could this explain anything?

You feel it isn't right that an English writer does not have same
problems writing english as you have. Don't be so selfish. It is
only good that not all have problems writing the 'common language'.
I think the situation would be even worse if no one could write
the common language well...
English is quite widely accepted as a common language and
I have always felt a bit anger when I see these programs that
are in german. Almost everyone knows english, but most of
us non-germans do not know german. I know a bit german, but
computer vocabularity isn't familiar to me. Usually I just
trash the program if I it hasn't got english documents.
It just takes too much time to try to figure out what is
said in the document if it is in german.

Yes, I have that and something else that was called "DARKROOM" but
frankly I was hoping for something a little more sophisticated than
these....

I've been using a Mac program with my Spectre GCR (bought my base unit
used from a Mac user and cobbled together a cable for use with the ST)
but since the GCR doesn't work with my Falcon, I'm in a bit of a dillema.
Any suggestions?

>any help!

You can get 80 cols if you change your Falcon's nvram config. I think
there is a cpx to do this on one of the diskettes you got when you bought
your falcon. Otherwise there are a few available on ftp (I don't remember
their names right now...). Once you have changed the nvram config you won't
need anything to make it boot at 80 cols...

Regards, Christer.

: I'd ask) Thanks!
: --Lunatic

Yes. You can do so. In Germany exists an board called Multiboard. There you
can add up to 12 MB with SIMMS. Also on this board there is place for Tos2.06.
An AT-Bus adapter and a VGA-graphics-card adapter for a ET4000 are built in.
The board itself costs around 290 DM. Hope this will help you.

Replying to my own article here, but it looks like most of what I wrote
before disappeared somehow. I hope it all gets through this time.

In article <FCTKAFUQUp@elrond.Simplex.NL>,
Henk van der Griendt <henk@elrond.Simplex.NL> wrote:
...
> I have also a program that gives a kind-of grey-scale on the B/W monitors
> by flickering. Sometimes very nice. If you are interested, I will try to
> fill in the details.

That would be MGIF, originally written by Bill Rosenkranz, but developed
further by me over the last couple of years.
Version 4.4 will be out RSN(TM) featuring among lots of other things:
- a GEM GUI
- mapped and 24 bit colour in any native ST/TT/Falcon graphics mode
(BigScreen, BlowUP030, OverScan etc are supported but no cards yet)
- GIF/JPEG/Targa/PPM/(X)IMG load
- GIF/Targa/PPM save

GIF load/decode should be the fastest available and the drawing speed
(especially in 256 colours) has to be seen... ;-)
Monochrome flicker drawing is much faster than for earlier versions.

MGIF 4.4 will not give very nice results in colour on an ST(E), since it
does not use any kind of palette switching or flickering in anything but
monochrome. In higher resolution 16 colour modes, 256 colours or Falcon TC
most pictures look very pretty, though.

MGIF is FreeWare and full sources are available on request for use in
other FreeWare packages (at least the sources will be available once I
finally get it released). The latest beta versions can always be found at
my ftp site, rand.thn.htu.se, though I haven't had time to put anything
new there since the middle of February.

All comments etc on the beta release are very welcome. I'd especially like
to hear from people running MGIF on TTs, since I'm not 100% sure that
the drawing routines work as they should in all TT specific modes.

0,31mm dot pitch would be at the lower end of the high res monitors,
the norm now is more like 0.28mm, 0.31 would be just OK for 640*400..

One thing that people don't tell you about dot pitch is the smaller it gets
the brightness drops off, except for the real Trinitron Sony tubes, they don't
drop of so much....

AFAIK, Gordon doesn't support SB any more. Version 8.1 seems to be the latest,
and last one as well.

>I do sugest that if you want a Real boot manager go and Buy X-Boot, I think

IYO, of course. Our mileage may differ ...

Hmm, you're saying SB isn't real? I has been working fine on my various
machines for years. And it'll do in the future as well.

>Far Far better than any PD stuff that I have seen, and has a nice Gem

[FX: cough]

At the fime _any_ bootselector runs, *GEM* isn't active at all. XBoot uses a
"roll your own" kind of GUI ...

Bye.

Source record: 168714

My experience with ICD PRO utility.
I am with an MEGA STE-4 w/Atari Host and a Quantum Lightning
540 S.
I had to use the ICD PRO to format. One problem. I used the ICD Boot
from the Desktop..but..there are various versions of the Boot.
I found out that Version ICD Boot (628-40,566 bytes) worked and let
me into the HD Util where I could format and do all the rest.
After getting formatted I could then install the Atari Install or
the ICD boot. Preferred the Atari because it was faster..I am aware
of the ICD program to shorten this wait. But, if the HD refuses entry
then the Atari HDX makes it easier to gain entry.
Now...how do I get past the apparent 343 folder limit from the Desktop
or the 400 folder limit from UIS 3.2? I did use FOLDERXXX but didn't
seem to make any difference (TOS 2.06).

I haven't tried it because people didn't suggest it to me when I asked about programs that support ISO-LATIN-1. Well now I have and I can tell that it seems like a decent package, but I can't use it because it's in german. Also I managed to get two bombs out of it. Scandinavian characters seem to work, but without connecting somewhere I don't know if they are ISO-LATIN-1 or what.

: : need anything but the SCSI-2 cable and a power supply (& case).

: : Best Regards,

: : ----Pekka Saarinen

: Pekka, the Adaptec is a RLL hard disk controller. It connects to a SCSI
: bus. I now have the latest version of ICD Pro Utilities from Toad
: Computers and everything works quite well now. All it needed was a
: proper driver. The ICD has proper code to access extra LUN's within
: controllers and AHDI does not. Besides, it's FAST!

Oh, that's it. :-)

Do you know anything about installing both IDE and SCSI with ICD pro
6.5.5 ? I have the software, and while trying to install the ICD driver
(to 170Mb Quantum IDE and 500 Mb Quantum SCSI), the ICD did not recognice
IDE properly all times, and it messed up the directory displays of IDE
drives. In the ICD Pro 6.5.5. there's not a word of IDE, but some people
here have said that it should be Falcon compatible.
I tried zeroing the C: before installing the new bootdriver.

Is there something I've missed? If you know a newer version that works,
please let me know! I'd like to make it work, as AHDI is really from
stone ages compared to ICD.

I haven't used Turbo St for years. I think it interfered with
something else. As far as I know it isn't supported anymore. why not just
use one of the newer, supported, accelerator.

Why do people say this !!!

If you know anything about the TT, you should know that the system
board is jumper configurable for 16 or 32 Mhz. Only the early TTs had the
16Mhz board, they were the 16 Mhz processor versions.

Cheers
Marcus

I'm looking for a simple MOD player (not STe just plain old ST) that
runs with a command line (ie .ttp) so you can access it from a program.
If anyone has one could they send it binary (uunencoded) to me, as I
have been unable to locate one locally...and I don't have access to
a FTP.

That is one the problems in these so called Virus killers, they
kill working Game disks as well..

I have never ever use one, I use a sector editor and change the first
bytes of the boot sector to 00, this will deactivate the boot sector,
if this has suff things up you can replace the code that was there...

5074. What Defragger ?

Newsgroup: comp.sys.atari.st
Date: 1995-03-26 00:00:00 UTC
From: kevan@empyr.dircon.co.uk
Message-ID: <03261995.233901@empyr.dircon.co.uk>
Source record: 168729

Hi, can anyone recommend a good hard drive defragmenter. I have been using Atari's CHKDSK up until now, but I have a suspicion that it does not work too well with my ICD HD driver software. I have a couple of bad sectors on my drive, and whilst they are marked bad in the FAT, chkdsk seems to ignore this and keeps trying to use them, resulting in 'Data on Drive <n> is damaged' alerts.

I cannot understand German or French, so English language programs would be a definite plus. (I'm certainly not going to try _anything_ with my HD unless I am 100% sure what it means :-))

Thanks in advance.

5075. Did someone want an Atari 1040ST?

Newsgroup: comp.sys.atari.st
Date: 1995-03-26 01:32:04 UTC
From: willfull@cybernetics.net
Message-ID: <3l2g6k$fv6@news0.cybernetics.net>
Source record: 168710

Taking offers on this system ... excellent condition:

o Atari 1040ST computer (circa mid 80s)
- 1 meg Memory
- internal floppy drive
- all cables and manuals (no boxes, though)
- has a few features such as: built-in MIDI ports, good sound effects
and graphics (for an 8-bit computer), serial & parallel ports for a
modem and printer

o Atari SC-1224 Color Monitor

o Panasonic KX-P1180 printer
- standard 9 pin dot-matrix
- comes with printer stand, parallel cable, and paper

o Hundreds of disks of software
- Ranging from games, to word-processing, to desktop publishing,
graphics, and utilities. Mostly games, of course. Bunches.

o A few miscellaneous items, such as a 2400bps modem, and floppy
disk copier, which can copy any Atari ST disk out there, regardless
of copy protection. Also gray fabric dust covers for computer and
monitor. Monitor stand to adjust positioning.

Good little computer. Has lasted a long time without any problems. Still
in like-new condition (no scratches or anything like that). Great for
playing those nostalgic games like Phantasie, Ultima, and Questron.

Asking price is $300. Please e-mail me! (willfull@cybernetics.net)

Or call: (919) 992-8478 and leave a message on voice mail
(919) 833-9236 (and chance leaving a message with my room-
mates and risk a 50% chance it reaching me)

>Only problem is, when I save the game, it does not work. Every file that is

I also initially had a similar problem. First it wouldn't run at
all unless I booted with nothing (holding down <control> w/ ICD Pro)
Then I noticed that the save game option wouldn't work. I'd click on a
empty slot and the whole CPU would freeze up. What I ended up doing
was disabling all AUTO prgs and ACC, booting, then changing to 16 color
, 80 char, double line ON. Now it works great!! Wierd huh? It wouldn't
work with Warp 9 either, though the docs say it would. I don't think
the game play would be sped up by Warp 9 anyhow, plus it is FAST as it is!

GREAT GAME! HIGHLY RECOMMENDED!!! I'M BUYING MY BOOK TO GO ALL THE WAY
SOON!!!!!

I've been using ICD Pro v6.5.5 ever since it came out, on Falcons both
with and without internal IDE drives, and I've found it works just fine
with external SCSI drives installed. Any problems I've ever had with
drives are things I've always attributed to the Falcon's eagerness to
misboot, or to the drive itself.

>
>The GT6000 series are 600 dpi interpolated to 1200 dpi
>The GT8000 " are 800 dpi " to 1600 dpi

Sorry, they're not. The GT6000 has a 300 dpi optical device, the 8000 has a 400 dpi one. The new GT9000 finally has 600 dpi optical resolution.

bye, Peter

thanks Dick
email af366@cfn.cs.dal.ca

Hi Dick !
Troubled by the annoying fan ? It's there for cooling the original
Atari RAM memory, so if you've changed to a "SIMM wing" sollution
you can cut the wires right away, it isn't doing anything anyway.
A friend of mine cut the wires to his Atari RAM machine as well,
and it's been running like this for a year, but I wouldn't recommend
that. What I've done is I've moved the whole computer into a
"Desktopper" with free keyboard which means that the machine+RAM
gets more air, I get free keyboard + possibilities to add
drives, expansion cards, Barracuda 040 etc. I also get the FDI
and the FA8 away from me and closer to my desk, DAT and other
peripherals. But I tell you it's a *relief* not to hear that
fan whizzing away !

>with no other software system requirements. He's on this conference
>from time to time, so how's about an update, Annius? :)

Well then, here you are: Mausnet is right. Don't hope for an Atari
browser, at least not one that will be accessible to the home user.
The reason is simple: writing a decent application requires a lot of
work; the Atari market is virtually nonexistent, so the only solutions
you might get are quick hacks using MiNT and MiNTnet.

As we've argued before, those will not be suitable for most Atari users.
So I don't see a way to come up with a decent browser that satisfies
all of the Atari community (and even then I hardly believe I'd sell
a hundred copies---this is how bad things are these days!)

However, if before the end of this month, I get a few hundred orders
for the Atari version of Edith Pro, I might reconsider the matter :-)

Edith Pro can run as an accessory too.

>>BTW, how does a classical Accessory
>>read an environment variable under out-of-box TOS 1.4?

>Using getenv(), I'd assume.

getenv() is a library call, not a system call. In fact, accessories
don't get any environment variables unless you run a fix in the
Auto folder.

That's one thing. Now if you can get MiNT to be as secure as plain
TOS, then we're getting somewhere. Right now when I am using MiNT
my reboot average is once every 10 minutes... And that's on a TT
with memory protection.

>>class citizens'', [...]

>Edith Pro can run as an accessory too.

Like I said, I was just guessing. Ask the author of Thing, or of
ParaFin.

>>>BTW, how does a classical Accessory
>>>read an environment variable under out-of-box TOS 1.4?

>>Using getenv(), I'd assume.

>getenv() is a library call, not a system call.

Why would that stop an accessory from using it? But if you reallly
wanna hit bare metal... <flips through manuals> okay, looks like you
can grab a pointer to the environment string from offset 0x2c in the
basepage.

> In fact, accessories
>don't get any environment variables unless you run a fix in the
>Auto folder.

You mean a fix to have env vars at all, or a fix to make accs get them
when normal programs already would? I've never heard of anything like
the latter.

>> [...] Seriously, though, if we knew what their problems
>>were, we might be able to fix them. For instance, would a lot of this

Again, specifically what problems are you having? What programs are you
running? More importantly, what version of MiNT are you running?

]
] That is one the problems in these so called Virus killers, they
] kill working Game disks as well..
]
] I have never ever use one, I use a sector editor and change the first
] bytes of the boot sector to 00, this will deactivate the boot sector,
] if this has suff things up you can replace the code that was there...

If a virus has over-written sector 0 of an autobooting disk, then it
won't help them much roger. The only way to repair it is to use something
like UVK's boot-restore feature to stick the bootsector back on. UVK
won't let you kill a "working Game disk", only recognised viruses.

] I have an atari 520 ST which has a virus. This virus damages the disk when
] you write to it (makes it unreadable). Does anybody know where I can get a
] virus checker/remover?

Probably isn't a virus but a stuffed write-head on the disk drive. You may
have to remove the drive and clean it with some meths and cotton wool.

Just in case though:

atari.archive.umich.edu - atari/Utilities/Virus/vkiller.??? will probably
be of some use.

Try booting with a clean machine (no disk in the drive, and hard-drive (if
any) turned off). Then wait for the machine to boot. Try formatting
a blank disk, and copying some files onto it. If it works okay, then it
might be a virus.

From: popemerlin@delphi.com
Message-ID: <xq5avgm.popemerlin@delphi.com>
Source record: 168659

Hi,

We have just been to ECTS, and we have seen the Jaguar up and running along with a CD drive.

It is not much larger than a personal cd player but can sustain a transfer rate of 352kb/sec. The machine should be released at the end of this month.

It is all black and Jaguarish. Rather pretty, impressive as well. Better than the playstation which looks nice but does look like a real contender at the price.

Atari were very helpful (wow!!) and we look forward to seeing the Jag in every home by the end of March 1995 <g>

Do + the math = Jaguar (world beating).
The Saturn is only a jazzed up megadrive nothing esle extra included.

Bye.

AFAIK could you connect any CD-ROM using SCSI-II (e.g. APPLE Power CD or the
other APPLE drives.) or ATAPI but not these really cheap double speed drives
you could get everywhere around the corner.

There are different packages available. I'll send you the CD-ROM FAQ.

I have recently downloaded the MiNT Distribution Kit as I was thinking of installing things for enable me to read the many WWW pages only to find that the instalation says you require a minimum of 9Mb on a HD partition plus a few other things like memory (that is no problem for me). The problem I have is that I only have a 40Mb HD (and no cash to get anything bigger :-((( ) I have 1 partition of 5Mb that I can spare and would like to install a web reader can anyone tell me if this is possible or am I going to have to reformat my drive and re install everything. Or is there a WWW program that can be used from NOS?

From: dzander@solaria.sol.net
Message-ID: <3l4vjs$7vc@solaria.mil.wi.us>
Source record: 168660

Hello all,

I have an AtariST upgraded with 2.5 Meg ram and TOS 1.0 I don't have a hard drive but I'm thinking of getting one from Toad along with ICD LINK 2. My question is that I've heard that I really should upgrade to TOS 1.04 or 2.06 Do I really need to hardware upgrade? Can I use MagiC, Geneva or MultiTOS? Aren't these TOS replacements? Which is recommended? If I should do a hardware upgrade, which TOS version should I get?

Any answers would be appreciated. Thanks!

I have been using HSmodem on my Falcon for over a year. Simply dopy the
programs DRVIN and SCC (in that order) to your AUTO folder. Assuming you are
using a decent comms app, all should work.

I wish I had the money to pick up all these STs hitting the market. They would make great controllers for various external devices like home alarms, lawn sprinklers, indoor lighting, temp regulators for heating/air conditioners. Any more ideas out there? Are there any external controllers one can use with the ST or do we have to roll em up ourselves?

```

Key letters there anyway, "PD". X-Boot (last time I looked) was about $40US. Superboot is PD/Shareware. You get what you pay for, X-Boot is probably the best (a lot of superboots extras are frivolous, but interesting), but it ain't free.

You can get them at Radio Shack. They're called "Plug 'n Power" and they work like a charm. (I got my base unit used, and it still says "X10 Powerhouse" on it.)

They're available in models for use with Macs and PCs, including the cable for connection to serial port, and software. I ran the Mac software using my Spectre GCR, but that no longer works for me since GCR doesn't work with my Falcon. I'd sure like to find a good, working GEM-based version of the program. I've seen the program that was written in the early issues of STart, and I've seen the DARKROOM program (don't know if they work on the Falcon at all...) and, well, frankly, they're pretty substandard stuff. That's why I was asking if anybody knew of the program called ECHO (?) that Michtron used to sell?

Heh heh heh. The original "twit" name-caller won't even acknowledge when
his stumbling feet end up in his mouth! His feet are probably so used to
being in there that he doesn't notice anymore. I apologized for getting
things a little out of hand, but you were just as guilty, although too
much of a wuss to admit it. Also, while I grant you have the ability to
recognize name-calling (hopefully), please refrain from attempting to
analyze the logic in my messages (or anyone's!), for logic is a horse
which threw you off a long time ago, buddy.

> Why are YOU here..? To give Atari owners a bad name..?

I'm here because I use and advocate Atari computes - a point obvious to
any but the most clueless (you). The way you were raving and bashing, I
just couldn't resist and replied to your original outbursts. (waste of
time in retrospect, but entertaining nonetheless)

>
> You're doing a good job of it.

Ooooohhhh you just burn me with the insults :) Actually, I assure you
that central to my plan for engaging in this exchange with you was to
address YOUR spouting off about the faults and problems of Atari
computers, and your personal bias and lack of objectivity was pretty
apparent to everyone - when you wouldn't even admit that
what inherent disadvantages that are in the PC architecture even
exist!!! You'd argue that these obstacles were easy for you so anyone
who can't do them is stupid.....while the industry has been continually
trasnforming the PC to cater to these "stupid" masses you refer to.

Sorry, BobR - it is you who is truly in a sad state of affairs. I really sympathize and pitty you for your lack of intelligence and understanding. Lord help you.

James

I have HSModem on the Falcon here, and it works. I only use a 9600
baud modem...and the Falcon port at 38000 gives me a faster
throughput, than with my STe port at 38000, when using HS-modem

Here are my settings for the SCC program:

m2tt: left it untouched
m1emu: left it untouched
lanbit: off
lanext: off
lan_s2: left it untouched
dtrm2: on
dtrs2: on
m2dri: off
rblm2, tblm2, rbls2, tbls2: gave them all values of 50000

You _must_ upgrade the Tos at least to 1.04. I have bought me a harddisk here
1990 and have 1.00 installed too. The files on harddisk crashed very often.
Now with Tos 1.04 I don't have problems. I can't say anything about MagiC or
Genva, but about MultiTOS. I have 2,5 MB too and installing Mint (which is
the underlying of MultiTOS gives me only few memory to work with. I think
you had to upgrade your memory too, if you want to use MultiTOS _really_.
Every real Multitasking nedds a lot memory

5138. First Word Plus File Convertors

Newsgroup: comp.sys.atari.st
Date: 1995-03-27 11:17:23 UTC
From: tony@hpqtdya.sqf.hp.com
Message-ID: <D63JD1.Jst@hpqmoea.sqf.hp.com>
Source record: 168684

Does anyone know of a piece of software that will allow me to convert a few old First Word Plus files to any PC word processor format? I'd ideally like to be able to preserve the character formats (italic, bold etc).

I've got ftp and web access, so a point in the right direction or even the name of a freeware package would be fine.

Thanks In Advance.

Tony.

I won't get into Roger-bashing(there's far too much hatred in the
world over insignificant things), but I will say that XBoot is a
very wonderful program, and no one I know has regretted buying it.
Superboot, Elfboot, Stoop (a Falcon-only boot setting program) are
also wonderful, and I know many people who use at least one of them.
(I know one who uses Stoop for his Falcon, and Superboot for his STe)

There's an upgrade for users of ICD (and anyone else - it doesn't
hurt any other booting software, and is recommended by the authors)
which fixes the problem.

5142. FS: Atari MSTE 4

Newsgroup: comp.sys.atari.st
Date: 1995-03-27 11:43:13 UTC
From: wongck@lobby.ti.com
Message-ID: <wongck.106.000BB8C9@lobby.ti.com>
Source record: 168565

Hi there,

I will be moving back to my home country, where the power is 240V, and so
want to sell my American MSTE 4. The following package includes -

* Atari MegaSTE 4 (without monitor).
4 meg memory, 16Mhz CPU with Cache.
170 meg harddisk.
1.44 floppy disk drive.
* 2400 bps modem, cables, power adapter.
* Software (with box & documents).
F-16 fighting falcon, Red Storm rising, Tetris,
Word Up, Maxifiles, ST Tuneup Harddisk utils,
Flash comms program, Hotwire plus tons of PD stuff on HDD.
* 68882 FPU but needs to have a adapter to put in into the MSTE.

Selling price all these at US$550 only. You pay package/postage.
(will deliver free if you're in Dallas, TX area or ~1 hr drive from me).

Regards
William

: With some little program?

If you have TOS 1.04 or later, by formatting a disk in the Desktop.
For older TOS versions, just about any of the formatters on the usual
archive sites will do.

Easy? Well, I have tried to install it - followed the little of instructions
I got with it, but when I tried to run it, all it did was displaying a message
on my monitor (PowerDOS ver.xx.xx etc.) and did nothing close to multitask (It didn't
even `unotask')

Hope you out there can help me.

- Hrafnkell Freyr Hlodversson

P.S. Why is it called multitask, not `polytask'
What about monochrome vs. polychrome (aka. truecolor)
Why not unochrome and multichrome. :-)

]S.Lai

GPIB = HPIB = IEEE488

It is a parallel instrumentation bus standard. It stands for
General Purpose Instrument Bus (or Hewlett Packard Inst Bus which is fair
enough because they invented it) and was taken up by the IEEE as a US
standard, which became an international standard.
Most decent instrumentation has a GPIB port on the back, although
a lot of modern stuff is moving over to having an RS232 port instead. The
main problem with gpib is that it is quite old now, data rates are not
spectacular, and the standard cable is too big and clumsy (IMHO).

I don't know if there is a card available, although it may be
possible to put a conversion box on the printer port.

*** NEW 540MB SCSI HARD DRIVE SUB-SYSTEM FOR SALE ***

I currently have one 540MB SCSI HD System for sale. This is for the Atari ST/STe/TT computers. This is a NEW hard drive in NEW hard drive case. I will warrant this system for full year. After that the manufacturers' warranties on the hard drive, case, and host adapter apply. If there is enough interest, I may be able to get more of these systems.

Why buy used drives when you can get a NEW one today for only $450.00 shipping included? (COD $5.00 extra) ^^^^^^^

Here are the specifications:

o ICD FA-ST Hard Drive Case
o under-monitor designed case w/adjustable legs & fan
o DMA input and output ports
o external ID-switch
o external SCSI connector for further expandability
o internal expansion for second 3.5" SCSI HD

o ICD AdSCSI Plus ST Host Adapter
o full SCSI command set
o parity bit generation
o dual mode DMA daisy chaining
o battery backed real-time clock

o ICD Hard Drive Utilities

o Quantum 540MB SCSI hard drive
o low profile 1" x 3.5" form factor
o 12ms average seek time
o 4MB/s max. transfer rate
o 256K cache buffer

zrollinso@cc.curtin.edu.au wrote:
: Can anybody tell me what is involved in a TOS upgrade?

: Currently I think I have version 1.4 (or it might be earlier - I can't drag
: files onto applications to execute etc so whatever I have is before that
: feature was introduced).

: What is the best version to upgrade to and how difficult/expensive is it? Or
: is upgrading to a new version of TOS a waste of time.

: I have a 520 STe with 4Meg of ram and AddSCSI+ adapter with several HD's and
: tape backup (if that makes any difference).

: Steven Rollinson
: Steve.Rollinson@MIS.WMC.wmc.telememo.au

: Disclaimer: My employer does not care what my opinions are -
: as long as I keep them to myself.

Believe me, TOS upgrade isn't a waste of time. I have 2.06 in my STe now and I
cannot imagine how to work without it. I needed 2 EPROMs and the TOS of course.
There is few people in Poland, who have Polish versions of os, so I have one.
It isn't expensive - about 25$ (but TOS was pirated). I strongly suggest
to make this move.

: downloading?

: Rod

Personal favourites:-

OXYD - nice design, nice gameplay - needs to be registered though.
TRIPLE YAHOO - Very good Yahtzee variant (but not the exact game)
MINE 2 - Good mine sweeper clone

There are others (like Boom 2, Les Dinosaurs...) but they are more demos
than full games.

Hi there,

Can anybody help me in recommending a program that will let me save the current screen on a Falcon. Much like the screen savers on the ST that silently hide under the ALT-HELP or SHIFT F1 key combinations and then dumped the physical screen to disk. I require one that will operate on the Falcon and can save out as a reasonable format that could be converted to TIFF.

Suggestions most welcome,

RiCH

Would that be the ones with beholders (flying eye thingys) behind them?
The one on the left (that I think your stuck on) can be opened with a
key in a secret area. There are two buttons in the corridor leading to
the two doors. behind one of them is the key to unlock the door, the other
has a chain(?) to unlock the other secret door.

I think this is where your stuck... hope it helps.

But isn't that the reason why virus killers 'kill' working game disks?
(Or actually the virus, as it replaces the original bootsector of the disk
wich may include some game code)
So making the bootsector unexecutable would also kill the game.

: the Falcon and can save out as a reasonable format that could be
: converted to TIFF.

GEMView does it. It comes with a XIMG snapshot utility, and the XIMG
pic file can easily be converted to TIFF.

However, I use ImageCopy to do my snapshots...I specifically use
Imagecopy 3.5CD, but older versions have the same facility.

We use gpiboards at work here. One to attach the scanner to the computer, the other to attach the film(slide) recorder to the computer. I used to know EXACTLY what they were for- when we first installed them- but now it's been three years and I haven't used that info, so I can't remember anything else (docs are with the techies). But this will give you an idea of their use - the same sort of idea as SCSI - for hooking external devices too.

Fried Bits III will be 14.-17. April in Bremen Germany....
About 80 crews are supposed to be there, and 30 crews
have releases....

That's all I know about it, but I'm getting more info about soon.

E-mail me if interested...

Upgrade to at least TOS 1.04; 2.06 is better, but anything is better than
1.00. I'f you're not planning on accelerating your machine, I would
advise getting Geneva. MultiTOS is dead slow on an 8 MHz machine. I don't
know how fast MagiC is, but from the pictures I've seen, Geneva's a lot
prettier ;-). Geneva flies on my 25 MHz machine, and it's reasonable even
at eight MHz. Also, it uses very little memory, so you'll find 2.5 megs
more than sufficient for most tasks. Note that Geneva is _not_ a TOS
replacement, just an AES replacement. GEMDOS, VDI, and XBIOS remain,
which is why you should still upgrade your TOS version.

A program like AtariWorks, Marcel, ... will save/convert to
RichTextFormat(RTF) which is used in most recent Mac/IBM wordprocessors.
Marcel is shareware and only 10$. Atari Works has spreadsheet, word
processing, and database programs integrated into one.

It really depends what resolutions you're going to be running at. If
you're using standard TT colour resolutions (i.e. up to 640x480), .31
will be fine. Even .39 is OK at 640x480. .31dp might even be fine up to
800x600 (if you get a graphics card). Even if you're not happy, I think
you'll be able to sell it again, as there is a market (particularly among
Amiga and ST users) for Multisync 2's and 3's.

Oh my *GOD*. What I meant is that *that* 0x2c thing, for accessories,
points at nothing, obviously (for, what file can GEM read the
environment from before it starts accessories). And hence the library
call doesn't help you out either. Of course I use getenv() instead of
peeking into <basepage + 0x2c>.

I have a 2 year old quantum 105 meg hd with older icd adapter for sale.
It comes in an atari floppy disk case and uses an external pc supply to
power it. You can have it with or without the supply, the only difference
will be shipping costs. This drive works great. It also has lots of software
on it. Mint, GCC, Heat-n-serve, editors, games, accs and what not.
I want $125 U.S. dollars for it.

I also have an Atari sc1224 color monitor for sale. It works great too.
I want $100 U.S. dollars for it.

5180. ACN Hardware sales---A Warning (was: Atari Transputer)

Newsgroup: comp.sys.atari.st
Date: 1995-03-27 17:36:34 UTC
From: avg@cwi.nl
Message-ID: <avg.796325794@news.cwi.nl>
Source record: 168630

Koos_Kuil writes:

[ACN still sell the ATW]

Sure, but here's a warning: I DON'T RECOMMEND BUYING ANY HARDWARE
AT ACN.

I bought four items of hardware worth NLG1000. Ad promised they would
be new or demo models. All of it was utter rubbish. It was old and dirty.

- A portfolio had a German keyboard, and turned out not to work
(no image on screen). Others have had French keyboards, without a warning.

- A TTM194 came without a cable. Cable came after 2 months.
The TTM194 makes scary ticking sounds, and the screen is
unstable (standard TTM problems I guess)

- A 1040STE has been opened; the 1040STE tag is missing and it
is a UK model (not NL-PAL broadcast compatible, so no TV option)
It looks 4 years old

- A SM124 has a damaged cable. When I hook the cable up to the
1040STE, the computer refuses to boot. :-)

(and a few other problems)

I ring the guys, their answer is: Oh, are you not happy? Return
the items and we will only charge you 10% for administration.

I refused (how am I to return a TTM194---don't have a car; Dutch mail
refuses items that big) and sent them two letters, explaining the
situation in full detail. No answer (for about three months by now).

A month later, I returned the Portfolio, with a new letter explaining
the situation again. No answer.

If ACN can't provide a TTM194 with a cable, how are you going to
expect them to sell you an ATW? Don't do it, unless you want to
open an Atari museum.

I bet they're not even authorized to sell hardware, but that's
speculation.

Any other people with ACN problems? It is time to take some (legal)
action against these people.

>with memory protection.
>
I haven't had problems with Mint-X - my average reboot is once every few
days and since I've been doing a lot of compiling I get a hell of a lot
of bus errors in what I compile when I'm playing around with stack sizes
to see the minimum I can get away with for a particular app. These
errors to not kill the system. I find it more stable than TOS!

Sorry to all those waiting for some X-apps - I've still got some more
bugs to fix in many of them. I just got Xfig 3.01 working the other day!
(It's huge though so you need a lot of memory)

5186. Floppy drive problem (still!)

Newsgroup: comp.sys.atari.st
Date: 1995-03-27 19:46:02 UTC
From: dhbutler@magnus.acs.ohio-state.edu
Message-ID: <3l74lq$6g9@charm.magnus.acs.ohio-state.edu>
Source record: 168635
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

OK, here's the problem I'm still having. I've got one good floppy drive, but it's external, and therefore drive 'b' on my mega 4. That's fine for most of the things I do on my machine anymore, but the problem is that the dang thing is now completely ignoring the fact that drive A exists at all, and, when it things there is no drive a at all, it for some reason assumes there is no drive B either! In other words, 99% of the time when I boot my drive A light never even flashes, and, when this happens (when there is no drive activity whatsoever), then I also can not access drive B (it tells me to insert disk B into drive A) either. I've already tried programs such as drivert (which does absolutely nothing at all on my system, go figure).

So, I was hoping so hardware-knowledgable person out there might tell me exactly which wires to ground or put to 5volt (or to 12 volt in the case of the power cable of course) in order to simply suggest ever so nicely to my ST that drive A is in fact connected but that there is no disk in it. That is, if I just remove the friggin' drive and run some jumpers to tell the st "Here is Drive A, it exsts, but there is no disk in it" (that way it won't try to access drive A on bootup until hell freezes over, which is what it does now).

The instruction will have to be in very plain english. I can solder or simply jump from one pin to another in the cable, but you'll have to tell me exactly which pin number to jump to which pin number and how to tell which pin number is which (unless it is clearly marked of course, but I have not checked that...)

Thanks a million!

I purchased the Thrill Time compilation package of software some years ago and am looking to buy someone's game called 'BOMBJACK' which was in Platinum Volumn 2 of that package. My daughter was heartbroken when the disk failed and I promised I would ask on the net to see if there was another copy out there. Thanks in advance for your time looking through your game archives!

>Far Far better than any PD stuff that I have seen, and has a nice Gem
>interface...
On the whole I would agree, but it also has glitches. In the parametres
section one tells Xboot where you are hiding *.inf, *.acc, *.cpx files. *.cpx
and *.inf have worked OK, probably because XControl 'remembers' where your
*.cpx file are. But *.acc has never worked for me, I have to use the batch
file to kill all c:*.acc's, and individually copy the *.acc's I want to run
to the root. This can get a little tendious(CLI anyone? 8^) Has anybody else
had this problem? or can suggest a solution? -Roger?

>haven't heard back from Mr.Moore so I am still open to suggestions.
Yes.
Xboot will do that and more.
you can set up the hot key you want to bypass xboot and rerun last setup.
you can hit a key combination (alt-F1 for first set) to run a set.
you can copy, rename, delete, move files BEFORE you run your AUTO folder
stuff. You can run batch files.
You can load suitable desktop.inf files (say calamus.inf --> desktop.inf),
same for assign.sys and extend.sys files (ie. AtariWa.sys-->assign..sys, etc)
I've about 20 sets, such as HiCalaumus, HiStorm, MedNEOdesk, HiGeneva, ...
I have exactly the same setup, STe, TOS 1.062, 4 Megs RAM
As for cost, hmm I think I paid 50$, but contact Gribnif@genie.geis.com for
exact price.

On looking back a few articles in this thread, I've discovered that
Annius slipped me a trick question. ;) Recall that he asked:

>>>>>BTW, how does a classical Accessory
>>>>>read an environment variable under out-of-box TOS 1.4?

Out-of-the-box TOS 1.4 doesn't _have_ environment variables. Which
means that if a program or accessory you're using requires them, then
you _need_ MiNT or MagiC (I assume) or NeoDesk or Geneva or an
auto-folder environment installer --- all of which, notice, run before
the accessories are started (or in the case of the desktops, start the
accessories themselves), and thus getenv() works.

And you never did answer my question: What problems are you actually
having with MiNT? We can't fix `em if you don't report `em, ya know.

I've got it here - FWP2RTF. It's about 20k uncompressed, so if I ZIP'd and UUE'd it it'd be suitable for EMail anywhere.

I don't know if it's on an FTP site anywhere.

That's one of the reasons for the MiNA (MiNA is not AES) project, AFAIK.

MiNT/MiNA could become a nice combination.

DEMORELEASE = all releases are not 100% definite at this time
---

At this time we are waiting for information from other groups. All this information is not 100% definite at the moment.This text will be updated.

PARTY VIDEO

We think we will finish a computer animated video with good effects and music. The video is made by the guy who created the Neon-demo video at the "PROTOS"-fair in Bonn/Germany. If this video is finished you can buy it at the party.

PRICES/SPONSORING

If all goes his right way, the first price for the Demo-competitions will be an

ATARI-JAGUAR + CD-ROM

We are in contact with some Atari-shops and Software-Developers to get Hardware and Software prices for the competitions.

SZENE DEMOS/UTILITY CD

After the party, Delta Labs will release the first Demo-CD and Utility-CD for the Falcon!Many old Demos and all Demos from the party will be placed on this CD.

COMPUTER-MAGAZINES

The following computer-mags will have articles about the party:

Papermags: - ST-Computer (D)
- Atari Inside (D)
- Start Micro (F)
- ST-User (GB)

Diskmags: - Maggie (GB)
- DBA-Mag (NL)
- Undercover-Mag (D)

- Atari Dreammachines (D)
- ATOS (D)
- PB-Diskmag (GB)

Attention: ALL INFORMATION IS NOT 100% DEFINITE AT THIS TIME. CHANGES COULD BE POSSIBLE!!!!!!!!!!!!!!!!!!!

Ok. THAT'S ALL FOR THIS TIME.

Good joke! The Jaguar CD-ROM will be released May 1995.
There are no games ready for CD!

CD Blue Lightning 5/95 (nice cinepak-animations, bad game)
CD Soul Star 5/95 (There was a preview on cartridge, looks nice)
CD Highlander 6/95 (The looks like "Alone in the Dark"...)
CD Super Burn Out 6/95 (Yes the game looks great, 2 player-mode,
there will be a cartridge & CD-Version)
CD Defender 2000 9/95 (Jeff wasn't there, and is was only the
Defender Plus Version on video-tape!)
CD Demolition Man 6/95 (on the video-tape was the 3DO-version ;))
CD F1 Racer 9/95 (very bad game, awful slow 2 player-mode)
CD Creature Shock 6/95 (on the video-tape was the MPEG-version :()

that was all for now!

> It is all black and Jaguarish. Rather pretty, impressive as well.
>Better than the playstation which looks nice but does look like a real
>contender at the price.

Yep. Sony shows only about 6 games on the ECTS!! ;)
(Tekken, Ridge Racer, Toh Shin Den, Motor Toon GP, Raiden & Starblade)

Greetings
Martin Lethaus / Jaguar Mag Germany (26.03.95 on the ECTS)

: Edhak isn't too bad but it requires a lot of user input. Having
: just subbed Atari World where 1/3 of contributors use Macs, 1/2 use
: Ataris and I use a PC, I think I've seen the problems at first hand!

: AFAIC cross-platform compatibility is a sick joke.

It isn't, use TeX (or german.sty) :-)
Thus you can write and read almost every char on almost every system.

Another way to interchange text is the RTF (Rich Text Format).
Every good textprocessing programm will support it.

Hutch (hutch@ilmen.lanl.gov) wrote:
: In a previous article, awright@stamford.win-uk.net (Andrew Wright) wrote:

: > AFAIC cross-platform compatibility is a sick joke.

: While cross-platform compatibility between the Atari and anything else
: is often quite difficult if not impossible, great strides are being
: made elsewhere in the computing world.

: I hate to sing praises to Microsoft, but I'l grudgingly give them credit
: when credit is due... Previous versions of Microsoft Word and Excel for
: both the Mac and Windows versions had the ability to save a file in the
: native format for the -other- machine. Nice. The latest versions of Word
: and Excel now offer 100% Mac/Win compatibility. There is no conversion
: process involved. A saved file from either machine can be read and then
: immediately used on the other.

This still leaves the question *why* there are two different formats
used by the same application on different systems?

Microsoft isn't able to implement it's own stadard (RTF), they simply
forgot to include the character-encoding in the DOS/Windows version
of their programms. (Has this been fixed?)
(Who cares, most non-MS application know how to handle MS-RTF)

We used pin 26 on the adaptec board for rll/mfm drives to get power to the link. I think you would need to see which of your pin outs has that power out but on the seagate it may not have a power out if it is an old model. The quantum must have a voltage out. You may also want to change the arrangement of drives in the chain. I have a seagate that will not work properly unless it is in the middle of the chain device 0 or 1 and not at the end of the chain.

John,

TurboST is no longer supported - it's been re-worked by the CodeHeads and
it's now Warp 9. You can find Warp 9 at any dealer or mail order place.
It's much better than Turbo was, and more.

Hi,

I'm trying to compile Xrn for Mint-X, everything has now compiled
but when I link it can't find functions re_comp and re_exec which
I assume are from the REGEX package. Anyone know where I might
get sources for these and/or precompiled libraries for gcc?

Thanks,
Sam

5213. Speed of Light 3.7

Newsgroup: comp.sys.atari.st
Date: 1995-03-28 02:58:30 UTC
From: sdenman@wolf.cs.washington.edu
Message-ID: <D64qy1.Jwo@beaver.cs.washington.edu>
Source record: 168650
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I'm please to announce that Speed of Light 3.7 is now available.

Since I can't seem to get into atari.archive.umich.edu (or msdos), I am thinking about posting it uuencoded to comp.sys.atari.st. Any objections?

If you have a favorite ftp site, please let me know and I will try to upload it there as well.

Cheers to all,

Stuart

Here is a list of changes in version 3.7 from version 3.5:

Changes in version 3.7 from 3.5
==========

-=> "New" now works when using Selectric Fileselector or wildcards. The first file replaces the current one, and all the others are added to the end of the image list. If you are using Selectric, you can also select multiple files to load at one time.

-=> Slideshow feature was added to automatically flip through the images in memory. Control direction, wrapping, start image, end image, and display time. Hidden drawing supported. And for more power...

-=> Speed of Light now supports a powerful scripting language for customized slideshows. You can write your own Speed of Light Scripts (.SLS) from scratch, or simply let SOL write them for you by recording your actions. When using slideshow scripts, you can even load and uncompress images in the background while viewing the last image!

-=> Speed of Light can now be run from resolutions with less than 16 colors (monochrome too!). The color editor and filtering may not be used, however. You can now use SOL from Medium resolution, and still display in Low resolution (on STs). Monochrome users can now also use SOL (with dithering, of course.)

-=> Lines (for clipping and zooming) now look right in monochrome and 4 color modes.

-=> GIF uncompressing time now takes 85%-90% of the time SOL 3.5 took.

-=> You can now have the screen be blank when drawing the images so they appear instantly. Great for slideshows.

-=> Dithering was changed slightly to provide an easier user interface and support for future updates.

-=> Some user interface improvements like tabbed dialog boxes.

-=> Fixed some bugs in DSP JPEG code from v3.6.

-=> SOL now loads GIFs with local color maps without complaining.

-=> Other miscellaneous bugs fixed (you'll be amazed)!

Changes in version 3.6 from 3.5
==========

-=> Added some DSP support code in the JPEG routine for the Falcon to make decoding faster. Greyscale and fixed colormap take 3 times more memory than without it, though. Still can use CPU decoding if out of memory or no DSP.

-=> Bug fixed that made STs and STEs bomb when switching to greyscale.

-=> Picture information box was added to the bottom of the screen while loading to give information about picture size, type, and number of colors.

First, you _can_ get the LC option. Second, the RAM board will take
SIMMs 1, 2, 4, 6, and 8 at a time. So quit whining and just decide what type
you want first, then buy 1, then 1 more, then 2 more, then 2 more, then 2 more.
I would say that 4 Meg X 8 = 32 Megs would be quite enough, especially if you
have 14 Megs of ST RAM. (BTW, if you didn't know of this option, just ignore
the "whining" bit ;^). Personally, I'm not into this upgrade path, though it is
a great product. The main board with '040 is $950, the unpopulated 32-bit RAM
card will be $300, and the 486DX33 card is another $400. Both cards require the
'Cuda, and the 'Cuda requires moving the Falcon into a bigger case. The 'Cuda
_is_ user installable, from what I understand. Personally, I plan to go with a
Speed Resolution Card from Hard and Soft in Germany. Anyone have some firsthand
experience with it?

Several people with Straight Fax and the Sportster have said that it does not work. The Sportster is not class but class 2.0, and this seems to be the problem. There is a difference, but I don't know what it is.

I'm at present trying to get the demo version of Coma to work. I've probably set something wrong, as it connects to the remote fax and appears to send, but nothing came out at the remote end. I noticed that I had to set Coma to 2.0, not 2, before it even got that far.

: Do you know anything about installing both IDE and SCSI with ICD pro
: 6.5.5 ? I have the software, and while trying to install the ICD driver
: (to 170Mb Quantum IDE and 500 Mb Quantum SCSI), the ICD did not recognice
: IDE properly all times, and it messed up the directory displays of IDE
: drives. In the ICD Pro 6.5.5. there's not a word of IDE, but some people
: here have said that it should be Falcon compatible.
: I tried zeroing the C: before installing the new bootdriver.

: Is there something I've missed? If you know a newer version that works,
: please let me know! I'd like to make it work, as AHDI is really from
: stone ages compared to ICD.

: Best Regards,

: ----Pekka Saarinen

Make sure your IDE has your C drive as a GEM partition and not a BGM one. This means you should make a small C partition on your IDE and then a large BGM partition for the rest of the space. Ten megabytes is good for a boot partition if you have lots of AUTO programs and accessories and fonts. Otherwise 5 megabytes is sufficient. The rest of your drives can be anything you want. You should partition all of the drive with the ICDFMT.PRG utility. Do not use the AHDI partitions.

I believe TOS will only allow a maximum of 512 megabytes for each partition, but ICDFMT knows this and won't allow you to go higher.

Do not cancel the memory test until the drive ready/access light above the keypad has turned off. Otherwise TOS and ICD will not recognize your IDE drive as it was not ready when accessed. I used to have that problem until I showed a little more patience.

Make sure all unused SCSI addresses are not tested for. Make sure all unused drive letters are not checked for. If I am not mistaken, your IDE should show a SCSI address of 16 and your SCSI drive should show an SCSI address of 8. Remember, this is on the ICD screen, not the drive settings. Both drives should be set as device 0.

I don't know about versions, but my version of the ICD Pro software works just fine on a Falcon and says so in the docs. Older versions of the software that were not Falcon compatible will wreak havoc with your drives on your Falcon (as my old version did before upgrading).

I hope this has helped.

: |||
: Keep up the fight ||| I love my country
: or lose the right... / | \ but I fear my government

I use HSMODA06 on my Falcon. In fact I couldn't call at 115200
bps with my V.42bis 28.8K modem without it.

You must have DRVIN.PRG and SCC.PRG in your AUTO folder with
DRVIN before SCC. Set them up for baud rate replacement for
using higher than 19200 baud (it replaces 50, 75, 134, 150 with
super high rates).

MFP.PRG is useless on a Falcon and should not be used.

Also, ALWAYS use RTS/CTS in all forms of modem communication.

: Any answers would be appreciated. Thanks!
: --
: Douglas Zander
: dzander@solaria.mil.wi.us

Personally, I recommend MagiC. It is very fast and actually speeds up
your ST rather than slow it down (as does MultiTOS). It is also more
memory friendly than MultiTOS. Also, since yu are using an 8MHz ST, then
MagiC is a must. You will cry at the slow pace MultiTOS travels at on a
8MHz machine. However, both might not be compatible with a couple of
your programs.

5230. Re: Fried Bits?

Newsgroup: comp.sys.atari.st
Date: 1995-03-28 12:05:33 UTC
From: bubeck@peanuts.informatik.uni-tuebingen.de
Message-ID: <3l8u2e$f50@wsiserv.informatik.uni-tuebingen.de>
Source record: 168593

INVITATION ========== INVITATION
FRIED BITS 3 14.01.1995

After the success of the "Fried Bits Eastern Coding Convention 2" many people ask us to make a third party, so we do it. These are the invitation for the:

"FRIED BITS EASTERN CODING CONVENTION 3"

organized by:

The INDEPENDENT.

The party will be held from the: 14.04.1995 to 17.04.1995
in the "Buergerhaus Obervieland" in Bremen, Germany.

Alcohol is allowed, but if somebody flips out we will kick him and his crew immediatly...

This party will be held together with the Archimedes scene in order to develop better contacts between Atari and Archimedes groups. Some Amiga groups will be invitate to (e.g Sanity, Lego).

At this time these Atari Crews announced their coming:

Animal Mine, Aura, Avena, The Avengers (France), Channel 38 (Belgium), Cream, Inter, Lazer (Austria), Light, Mugwumps, NEWline, NPG, Risk, Sanity (Amiga), DNT (France), EKO (France), MJJ Prod (France), Hydroxyd (France), Dune (France), Sound Conexion, New Trend, The Chaos Engine, Dead Hackers Society (Sweden), Phobyx Creative, Synergy (Netherland), Xperience (Archimedes) and many other groups...

****
* C O M P E T I T I O N S *
****

This time we have many competitions with many Hard- and Software prices. The total worth of all prices will be about 7.000 DM - 10.000 DM...

These Competitions will be held:

SINGLE COMPETITIONS:

* FALCON DEMO COMPETITION (The biggest prices ever...)
(Atari-Jaguar and so on...)

* FALCON 96ktro COMPETITION (1st price: 300 DM)
(2nd price: 200 DM)
(3rd price: 100 DM)

2 IN 1 COMPETITIONS:

* FALCON & ARCHIMEDES GRAFIX COMPETITION (many Hard & Software...)

* FALCON & ARCHIMEDES MUSIX COMPETITION (many Hard & Software...)
(Pro- and Digitaltracker)
(in one competition...)

The german computer magazine "ST-Computer", "Atari-Inside" and the french ma-
gazine "ST-Micro" (I think that was his name) will report about the party.The
competition-prizes aren't set yet, but we're in touch with the local Atari-
store and with other Computer-stores to get some ATARI-JAGUAR and many other
Hard- and Software. Don't forget - THESE INFORMATION IS NOT 100% SURE AT THIS
TIME. Informations about the prices will be given out at the party...

****
* P A R T Y I N F O R M A T I O N S *
****

Now some infos about the party:

HOW CAN I REACH THE PARTY?

- If you go by train:

- leave the central station an go to the tram called: "1 ARSTEN"
- enter the front and buy a ticket for: "3,00 DM"
- leave the tram by the station at: "KATTENTURM MITTE"
- follow the signs (500 m) with the heading: "FRIED BITS 3"

- If you go by car or plane wait for the official invitation...

WHAT WE HAVE...

- about 80-120 tables (1,40m * 0,70m)...
- workspace for about 200 - 250 people and computers...
- sleeping places...
- shower in house...
- some food and drinks will be sold in the house...
- 3x3m LCD-Videoscreen in a seperate conference-room with big and good
(500 W) sound boxes for Demo-releases...
- Pizza-Service from 12.00 am to 21.00 pm...
- 300m to the next Supermarket (only open on Saturday)
- 1,5km to McDonalds...
- perhaps monitor-renting (not for sure at this time, if you wanna rent
a monitor ask quick!)...

WHAT YOU NEED...

- a warm sleeping bag...
- 30 DM for entrance...
- multiple cords...

ENTRANCE: 14.04.1995 09.00 am
END of PARTY: 17.04.1995 03.00 pm

If you're in Bremen and you don't know how to reach the party call "82 40 30"
and ask for an Independent member...

****
* I M P O R T A N T !!! *
****

If you're a new or an not well known group in the scene and you want to come
to the party, write me quick for an invitation, because we are very lack of
places...

My adress:

Frank Kurpiela (Stallion of Aura)
St.-Moritz-Str. 8
28325 Bremen

tel.: Germany - (0)4 21 / 40 08 81

You can also give a short info for your coming to the following people:

- Sepp Jo of Risk
- The Energizer of Lazer
- Anzac of Aura
- Smart of Channel 38

or send a pmail to:

* Frank Kurpiela @ HB2.maus.de
* Martin Seidel @ HB2.maus.de
* or Gorezone (++49-(0)4841-6069) to: "STALLION" or "SMART"

signed off

StaLLion of AURA / The IndePENdent...

PS.: These invitation is quick written. Sorry for the mistakes ;-))))

I would disagree; don't upgrade your TOS, but save the money and use it to
get MagiC. I would _not_ recommend MultiTOS. You should also try to
upgrade to 4MB, if you can.

From: Dennis McGuire <mcguired@moose.erie.net>
Message-ID: <Pine.LNX.3.91.950328083413.5453B-100000@moose.erie.net>
Source record: 168456

I recently moved up from an STe to a Mega STe. I have a utility in the AUTO folder which is supposed to put the computer in 16 Mhz cache mode. However, when I open the control panel, it says 8 Mhz. I change the setting in the control panel to 16 Mhz with cache, then save it and close the control panel. When I re-open the control panel, it says 8 MHz again! Am I missing something here???

Also, is there any utility which provides a visual indication in the menu bar of the speed the computer is currently running at. I'm never sure. The ICD AdSpeed I had previously came with a utility which showed an 8 or 16 in the menu bar for the speed setting. I'd like to have that since I'm never sure what speed it's running at.

5239. SALE: ST/Amiga Format Collection

Newsgroup: comp.sys.atari.st

A guide to installing X11r5 - however I could not run any applications
once i was in X windows !! (i have 4 meg)

To environment variables need to be set :

setenv X11 <root directory for X11>
setenv ROOT <root directory for X11>

These variables should be in the mint.cnf file on drive c when mint
boots

It is useless as I had no memeory after it had installed - is there any
way of limting the amount of mem X11 uses?

>

Couldn't agree more with your sentiments but the reality is a little
different - I've had first hand experience this month while
subbing the copy for Atari World <g>.

I use Word for Windows 6 while other contributors use all sorts,
ranging from 1st Word Plus through Papyrus to other Mac and PC WPs.
After subbing the copy, I then save it as a MacWord 5.1 file, copy
it onto a Mac, load it into Word 5.1, and save it in Mac pure text
format for the designer to import in Quark Express. (They gave me a
64MB Quadra just to do that so I'm not complaining...<g>).

It works OK - all the characters are translated properly but when
W4W saves in Mac Word 5.1 format, it uses only 8 colours instead of
16 and as I'm one of these strange people who colour codes articles
as I write them (red for standfirst, gren for crossheads etc), the
result when loaded onto to the Mac WP is pretty garish.

The W4W text importer is abysmal too - it throws in section breaks
and all sorts in the wrong places. It's been doing that since the
first beta, despite repeated feedback from me.

There are several other problems too - sometimes I get odd para
spacing and so on.

Sorry to wibble about cross-platform stuff here but it shows that
not all is as it seems in the PC/Mac world.

Regards
Andrew

5247. Re: Floppy drive problem (still!)

Newsgroup: comp.sys.atari.st

Problems with floppy drives could be due to many things. Here are a few suggestions.

Before you start soldering or doing anything drastic, try the "Lift and Drop" technique. This consists of lifting one end of your ST about 4-6 inches above the table and dropping it. Then do the same with the other end. This has the effect of reseating chips that have undergone "chip creep", i.e., that have "wiggled" out of their sockets because of heat changes, etc.

Obviously, you should do this when you computer is NOT on. It would also not be a good idea to do this if you have an internal hard disk unless you remove it first.

Another thing you could try would be DC Format's Floppy Configurator which is available on BBS's and Public Domain disks. This is a small program you can run from the desktop to turn floppy drives on and off, and set seek time for non-standard floppy drives. It comes in handy if you forget to turn on your "B" drive before you boot up.

Hope this helps.

Jason Simmons (phase@utic) wrote:
: I am considering designing some hardware/software for the Atari Falcon
: line but was wondering if anyone could answer these questions first:

: Who now owns the rights to the Falcon, etc line and how can I contact them?

I'm not sure if they own the 'rights' as such, but C-Lab are the people
responsible for developing the 'new line' Falcons. I'm sure some kind
soul will supply the address for them.

: Where can I get a complete list and specs on the Falcon line?

Falcon-line? AFAIK there is only the one machine, plus the C-Lab
variants. There were 1,4 and 14meg versions but technically the insides
were the same, give or take a hard drive or two. For a list of the tech
specs I will dig out the file I have on it and post it here.

: What books should I get for technical and programming information on the
: Atari Falcon line?

The Atari Compedium by Scott Sanders is a damn fine place to start, plus
the Modern Atari Systems Guide by HiSoft should be an essential
purchase. Failing that there are quite a few ascii files on various ftp
sites and disk magazines which contain 'unofficial' information such as
the illusive register listings etc...

: Thanks in advance,

Good luck

RiCH

Sure, I've owned a Syquest 44 since '89 and it's never missed a beat.
Definitely far from state of the art nowadays, but it still works.

My place of work also uses both Syquest and Bernouli removables for
some of their classified systems, meaning the units are used as primary
storage, not just for backups, all day long.

My experience has shown them to be rugged and reliable, but if data
security is really important to you over time, buy an optical drive.

: --
: Here is a list of changes in version 3.7 from version 3.5:

: Changes in version 3.7 from 3.5
: ================================

: -=> "New" now works when using Selectric Fileselector or wildcards. The
: first file replaces the current one, and all the others are added to the end
: of the image list. If you are using Selectric, you can also select multiple
: files to load at one time.

: -=> Slideshow feature was added to automatically flip through the images in
: memory. Control direction, wrapping, start image, end image, and display
: time. Hidden drawing supported. And for more power...

: -=> Speed of Light now supports a powerful scripting language for customized
: slideshows. You can write your own Speed of Light Scripts (.SLS) from
: scratch, or simply let SOL write them for you by recording your actions.
: When using slideshow scripts, you can even load and uncompress images in the
: background while viewing the last image!

: -=> Speed of Light can now be run from resolutions with less than 16 colors
: (monochrome too!). The color editor and filtering may not be used, however.
: You can now use SOL from Medium resolution, and still display in Low
: resolution (on STs). Monochrome users can now also use SOL (with dithering, of
: course.)

: -=> Lines (for clipping and zooming) now look right in monochrome and 4 color
: modes.

: -=> GIF uncompressing time now takes 85%-90% of the time SOL 3.5 took.

: -=> You can now have the screen be blank when drawing the images so
: they appear instantly. Great for slideshows.

: -=> Dithering was changed slightly to provide an easier user interface and
: support for future updates.

: -=> Some user interface improvements like tabbed dialog boxes.

: -=> Fixed some bugs in DSP JPEG code from v3.6.

: -=> SOL now loads GIFs with local color maps without complaining.

: -=> Other miscellaneous bugs fixed (you'll be amazed)!

: Changes in version 3.6 from 3.5
: ================================

: -=> Added some DSP support code in the JPEG routine for the Falcon to make
: decoding faster. Greyscale and fixed colormap take 3 times more memory than
: without it, though. Still can use CPU decoding if out of memory or no DSP.

: -=> Bug fixed that made STs and STEs bomb when switching to greyscale.

: -=> Picture information box was added to the bottom of the screen while
: loading to give information about picture size, type, and number of colors.

Sure, it's due to minor corrosion collecting on the socketed connectors.
Frequent use causes heat which dispels the moisture that leads to this
corrosion which is why you usually see it only on machines that have
been sitting idle for some time. It's also why the 'Atari Drop' (dropping
the computer from a height of 6 inches or so onto a flat surface) is still
used by many Atari technicians (both of them). ;-)

Binary files don't belong in the text-only newsgroups such as c.s.a.s.

It would be more appropriate to upload it to comp.binaries.atari.st. That
way, those that want it can go get it and everyone won't have to wade
through a large binhex file in the newsgroup.

At any rate, congratulations on the new release!

Cheers,

Have you got both systems running on your setup Roger? I have both on an ST
and Geneva on the Falcon. I also have MagiC on the Mac. Now, MagiC is faster
to load then Geneva, but both load fast enough for me. I also find that MagiC
is more stable than Geneva and is far from fussy.

ATARI WORLD price and subs

On 7th April Atari World will hit the streets. In the UK, issue 1 will only be available from the newstands but there'll be a subscription form inside for issue 2 onwards.

In Australia, NZ, Pacific Rim, Austria and Spain, AW should be available at larger newsagents, all of whom can easily order it.

In North America and other countries in the EU it will only be available by credit card order and then only via email. I'll advise you of an address in due course - I'd be happy to forward it if you want to mail me.

Overseas subs from issue 2 will available of course with postage costs of £1.30 to EU and £2.30 elsewhere. The cover price of the magazine will be £2.50 in the UK.

Anyone wanting to redistribute, please call Neal O'Nions at Specialist Magazines Ltd on 01487 773582 or fax 01487 773581.

: to send, but nothing came out at the remote end. I noticed that I had to
: set Coma to 2.0, not 2, before it even got that far.

CoMa will work with the sportster. It has to be set to class 2.0 and I
think it is important whether you select 14,400 speed - although I can't
remember which way works!

Anyhow, I managed to fax someone with CoMa, but only the first 150 lines,
which equates to about 1.5 inches were faxed, which is a limit in the
demo. Mainly because of this restriction, and the fact tat it is about 50
UKP to register, I ditched CoMa - although it looks like it would be
perfect for my needs.

I am now in favour of Junior Office, which I have nearly finished
translating into English, and which only costs about 10 UKP to register.
It imports IMG's and text files. It works in classes 2 or 1 which means it
supports the Sportster.

The GEM interface whilst composing your faxes is very good.
It is sort-of multitasking friendly, except when it is 'thinking'.

Steve Taylor.

STE's came with either TOS 1.6 or 1.62. The latest TOS version you could
upgrade to is TOS 2.06 which is a direct replacement for your TOS chips.
They cost about $60US from Toad (mail order) in the United States.

>I think most of the problems are concerned with the AES, which usually
>hangs the system when something goes wrong.

Oh, well, sure, no one AFAIK disputes that the AES part of MultiTOS is,
shall we say, suboptimal. ;) Fortunately, it's also completely
unnecessary for running MiNTnet.

I wonder if this isn't another big chunk of the problem; that is, how
much of MiNT's bad press is in fact because of MultiAES? Wasn't there
someone somewhere writing a fully MiNT-aware AES replacement? We
definitely need one. Maybe the upcoming MiNT-compatible version of
Geneva will fill the gap. In the meantime, if you're running MultiTOS
and having the sort of problems you describe, I'd advise turning off
MultiAES and just running MiNT + ROM GEM.

ACN are a bit slow to fulfil orders and their telephones are manned,
sorry personned, by idiots. Nonetheless both times that I have ordered
stuff from them -- some shareware floppies and now a transputer farmcard
-- the goods have arrived and have been as advertised. Actually I haven't
yet found time to install the farmcard, but it *looks* absolutely brand
new. Hard to believe it must have been sitting in a warehouse for 7 or 8
years. <g>

> If ACN can't provide a TTM194 with a cable, how are you going to

From: mtaylor@perth.DIALix.oz.au
Message-ID: <3lb84emtn1@perth.DIALix.oz.au>
Source record: 168490

Hello Harun,

I have been following the HSMODA06 with some interest. I have a TT030 with UK TOS 3.06 and I do find , on modem port 2, that I get upload errors when using HSMODA06. I use Stalker 3.04 and have found that I get identical transfer speeds with or without HSMODA06 but using HSMODA06 when I upload I get lots of repositioning errors. Also I use 14.4k modem with DTE set to 38400 and with HSMODA06 I get inconsistent connects.

I have found using Stalker 3.04 I don't have any problems but with HSMODA06 I do. Do you have any ideas what might be the cause of these problems.

Regards from OZ
Mark

You will probably want to check that all your voltages are present with a good DMM. You should see +5 and +12.

If you have voltages, try pressing down on all your socketed IC's They sometimes wiggle loose.

Then thoroughly inspect the motherboard for opens.

Good luck!

5292. Re: ACC bombs my mste

Newsgroup: comp.sys.atari.st
Date: 1995-03-29 00:00:00 UTC
From: hillsp@genrad.co.uk
Message-ID: <1995Mar29.151610.215@genrad.co.uk>
Source record: 168497

In article <3kkrv7$hs4@gbc.gbrownc.on.ca>, (Darren King) writes:

]I put a program (acc) that I had written and thought was free of bugs
]in the root directory of C: drive on my Mega STe. I then found out
]on re-boot that there were bugs (or bug!) in it because every time I
]boot, my machine bombs with 2 bombs. I would remove the offending
]program but it won't boot for me. Also for some strange reason, my
]machine (TOS 2.05) won't boot from the floppy but I have known this
]for years.
]
]Any help would help...

I had a similar problem with my Falcon. In the end I did this:
1. turn off the computer
2. Disconnect the hard drive ribbon cable
3. Turn on the computer and let it boot, either from ROM or floppy.
4. Now the dodgy bit... Reconnect the hard drive ribbon cable.
5. Run whichever hard drive driver software you are using from the floppy it
came on (In my case, I ran AHDI or HDX on the disc which came with the
Falcon), and tell it about the hard drive again.
6. When the drive C icon appears, go into it and remove the offending
.ACC from the AUTO folder.

Normally I wouldn't recommend connect up a hard drive with the power
on, but in this case you haven't got much choice it seems. It didn't
damage my machine at all, but I'm not saying it won't!
Good luck.
Paul Hills

Source record: 168498

In a previous article, awright@stamford.win-uk.net (Andrew Wright) wrote:

> Sorry to wibble about cross-platform stuff here but it shows that
> not all is as it seems in the PC/Mac world.

Not at all, Andrew. I well understand the frustrations involved in transferring text and graphics not only from one platform to another but across multiple applications. I can appreciate your nightmare.

But I was specifically referring to the claimed 100% compatibility between the Mac and Windows versions of the new MS Word 6.0. You no longer have to Save AS a Mac or Windows specific file... just SAVE it. The file format is now (supposedly) exactly the same on both platforms, much to the chagrin of Mac users since these new applications are very Windows-like (including huge filesizes, unfamiliar interfaces, and a seemingly lethargic speed).

Consider this:

Word 6.0 for PPC --- 14.7 Mb
Word 5.1 for Mac --- 2.7 Mb
WordWriter ST --- <300 Kb

And they call this progress??? <sheesh>

Sorry for the off topic discussion...

5294. MegaST + more For Sale (US)

Newsgroup: comp.sys.atari.st
Date: 1995-03-29 00:00:00 UTC
From: renfro@bnr.ca
Message-ID: <3lc24e$2g5@crchh610.bnr.ca>
Source record: 168499

For Sale:

MegaST 2 with 4 Meg RAM and ADSpeed 16 Mhz accelerator, SM1224 Monitor
This is essentially a MegaST 4 as the memory is soldered on the
motherboard. A few scratches on the case but in good working
condition. Will include a few bits of software if you want them.
Also will throw in a 2400 Baud modem if you want it.

Asking $350

SLM804 Laser Printer including UltraScript
I just put the third toner cart in this so it will need a new drum
when that runs out. Currently in good working condition. I have
installed a switch on the front panel to put the printer in
standby (same thing that happens when you open the back door) so
it can sit idle and quiet until you need to print something.

Asking $200

130 Meg Toadfile hard drive in 2-bay undermonitor case
This is a Maxtor drive inside a Toad case using ICDs ADscsi
with 2 ADSI ports, 1 SCSI port, SCSI ID swith, power in and out,
power switch on front panel, and an extra bay for expansion.
A new drive mech was put in last summer after the original
crashed.

Asking $200

For a really good deal you can have all of the above for just $500.

Prices do not include shipping, but might be willing to half the
cost with you if shipping to continental US.

I live in Richardson, Texas.

Contact me at the above or at r.hoekstra1@genie.geis.com

In article <3l965q$ekc@fileserv.aber.ac.uk>, jdp4@aber.ac.uk (JAMES DOWNING PAGE) writes:
|> A guide to installing X11r5 - however I could not run any applications
|> once i was in X windows !! (i have 4 meg)

Then I would humbly suggest that we don't follow this poor souls example
(it wasn't a very good installation guide anyway).

Just for the record, you can run 3-4 Xvt's on a 4Meg falcon, on an 800*600
screen, using 4 virtual 1600*1200 scrolling desktops (using the Fvwm window
manager & the GoodStuff button bar).

|> It is useless as I had no memeory after it had installed - is there any
|> way of limting the amount of mem X11 uses?

Nope. The memory usage is a real bummer, but Andreas is working on baserel
clients so that you can make them shareable (he reckons he can now open
10 Xclocks (500K binary) on a 4Meg f030, and I'm willing to believe that.

Really (and people keep saying this) MiNT needs VM & shared libs if it wants
to avoid being kicked off my HD by Linux as soon as I've got a bigger HD to
put it on.....at least the shared libs should be possible on a 68000 based
machine, and would remove most of the problems with the size of X applications,
as the standard Xlibs are massive (xmh - 50K source code, 450K linked
binary - work it out for yourself).

Craig Graham.

From: m9174@abc.se
Message-ID: <3lc8i7$m9f@oden.abc.se>
Source record: 168503

alfasoldt@aol.com wrote something like :

a> Idle 2.2 is the latest version of IDLE.

I wouldn't recommend anyone that uses MIDI applications to use Idle.

a> SilkMouse also has an excellent no-frills mono screen saver, in addition
a> to its fine mouse routines.
a> (The SM saver also works in color, of course -- but not on graphics
a> cards.)

Have I said this before? I so, please forgive me, but for approx.
three months ago, I got hold of a demo of TwiLight - The Screensaver.
It's from Germany, it's modular, works perfectly with my Falcon030,
and it even works under Cubase! It's reliable, very compatible with
graphic cards and resolutions, and it's BEAUTIFUL!

I have used mine for 5 years. (megafile 44). I have replaced the
drive itself once. It was out of warranty so I dealt directly with
Syquest and it cost me 175 bucks to replace it. I'm fairly happy
with the drive and it's performance.

Hi all, I got some wide ranging replies to my original article entitled "MagiC & MultiTOS". Some people said that all three (Geneva, MagiC, and MultiTOS) programs were tos replacements, some said only MagiC was and some said that none were tos replacements but only replaced parts of tos like the AES, VDI, etc... Most people recommended MagiC for its speed over MultiTOS and because it does not use as much memory as MultiTOS. Its interesting, the varying replies I got! :-) Anyways, I wish to thank everyone who replied and inputted.

5302. FAX: Groups and Classes

Newsgroup: comp.sys.atari.st
Date: 1995-03-29 00:00:00 UTC
From: neptune@galaxy.teuto.de
Message-ID: <FC4TCAAFUP@galaxy.teuto.de>
Source record: 168507

Hiya!

As some folks recently had some problems with fax-classes/groups, here is an excerpt of the FAQ:

----------cuthereplease----------

comp.dcom.fax FAQ (Frequently Asked Questions)

[...]

Class 1
The Class 1 fax modem standard describes an extension to the "Hayes Modem Command Set" to permit computers to send and receive faxes using fax modems. The Class 1 standard is a low-level specification in which most of the protocol work (i.e. T.30) as well as image generation (rasterising and T.4 compression) must be done by the computer (in software) while the modem only handles the basic modulation as well as converting the asynchronous data from the computer into the synchronous packets used in fax communications.

The primary advantage of Class 1 modems is that fax protocol is implemented in software which means that new extensions to the fax protocol standard (i.e. T.30) can be implemented without requiring a ROM change in the modem (or without waiting for the modem manufacturer to get around to supporting the new feature).

The primary disadvantages are (a) the software vendor has to handle the complexity of the T.30 protocol and (b) Class 1 (almost by definition) is very sensitive to timing and multi-tasking operating systems (such as *IX) have great difficulty in reliably meeting the tight timing constraints and maintaining the fax connection. Lifting this timing limitation is the primary motivation behind the new proposed Class 4 standard.

The official standard for Class 1 is EIA/TIA-578.

Although the official standard is copyright EIA/TIA/ANSI, a draft version has been published electronically by Supra and is available from their BBS (see below for the number) and from Sam Leffler at SGI (retrieve his FlexFax package, described below).

Class 2
The Class 2 fax modem standard describes an extension to the "Hayes Modem Command Set" to permit computers to send and receive faxes using fax modems. The Class 2 standard is a higher-level specification in which most of the protocol work (i.e. T.30) is done by the modem while the computer is responsible for managing the session and providing the image data in the appropriate format (i.e. T.4).

The primary advantage of Class 2 is that the low-level detail work is handled by the modem. Not only does this mean that software developers do not have to be burdened with having to support the T.30 protocol, it also relieves the host computer of all of the time-critical aspects of fax communications, making support of Class 2 modems under *IX systems possible.

The biggest headache for software developers is that the Class 2 standard took a long time to be approved (more for political than technical reasons, IMHO) and many companies did not wait for the final version to be approved before shipping modems. As a result we have a situation (as of 93Q1) in which all shipping Class 2 modems adhere (more or less) to the first draft of the TR29.2 committee (document SP-2388) and not to the standard as it was approved. To compensate for this, the "new" Class 2 is referred to as Class 2.0 and the "old" as plain Class 2.

(Warning - flame from a frustrated fax programmer on...)
Even more disconcerting is the fact that most companies who have implemented (the old) Class 2 have done one or more things wrong (they must have been smoking *and* inhaling) so we have a further division of the standard into "true, old Class 2" (which includes the Everex 24/96D and MultiTech modems) and everything else (mostly based on the Rockwell chip which differs from SP-2388 in a number of ways, although some other chip makers, such as EXAR, have found even more ways than Rockwell to depart from SP-2388). It's so bad that most modem companies now implement the Rockwell version of Class 2 just because so many of the *%#& things have been shipped (i.e. Multitech has a special command which switches their modem from proper Class 2 operation to Rockwell-like operation just so they can interoperate with DOS software that expects Rockwell-like operation). And of course no one at Rockwell or EXAR or the other companies bothered to write down the difference between their version of Class 2 and the TR29.2 document. (Flame off.)

The draft standard for the "old" Class 2 is SP-2388, Document TR-29/89-21R8, dated March 21, 1990. This is available by contacting the EIA/TIA directly. This is the standard implemented by all Class 2 modems currently on the market (true to the best of my (pajari) knowledge as of 26 Apr 93).

The official standard for the "new" Class 2.0 (also referred to as Class 2.0) is EIA/TIA/ANSI-592. This document ought to be available from Global Engineering Documents (see below) by May 3rd, 1993. As far as I (pajari) am aware, there are no true Class 2.0 modems yet shipping (as of 26 Apr 1993).

Note that although many modems that implement Class 2 also support Class 1, Class 1 is *not* a subset of Class 2. Also, there are some modems that only support Class 2 and many that only support Class 1.

Although the official standard is copyright EIA/TIA/ANSI, a draft version has been published electronically by Supra and is available from their BBS (see below for the number) and from Sam Leffler at SGI (retrieve his FlexFax package, described below).

Class 3
A class number reserved for a project to define a standard for fax modems that would, in addition to handling the T.30 protocol (i.e. Class 2), also handle the conversion of ASCII data streams into images (i.e. T.4). Although there are a couple of fax modems that handle the ASCII to fax conversion, no draft document has been circulated and the future of this project is in doubt.

Class 4
Class 1 with intelligent buffering to reduce the need for the host computer to respond instantly to the fax modem. This standard is expected to go out to ballot in 93Q2.

Class 8
Not a fax standard at all but an extension to the Hayes command set to support voice.

CNG or
Calling Tone
The distinctive tone that a fax machine ought to generate when placing a fax call (1100 Hz on for 1/2 second, off for 3 seconds).

CSI or
Called Subscriber Information
The "name" of the answering fax machine. An optional frame of information sent to the calling fax machine during Phase B (see T.30 below). Although many fax machines permit ASCII information, the T.30 standard states that this is to contain the international phone number of the fax machine, including the plus symbol, the country code, the area code, and the subscriber number using only digits, the plus symbol, and a space. (i.e. the North American fax number (604) 926-8182 ought to be programmed into the fax machine as +1 604 926 8182).

ECM or
Error Correcting Mode
An extension to T.30 to permit the receiving fax machine to request that portions of an image that were received with errors be retransmitted.

Normally the T.4/T.30 protocol is error detecting but not error correcting. The receiving fax machine can usually tell when an error has impaired the image but cannot selectively request retransmission of the damaged portions of the image. The only options are to (a) ignore the errors (if few in number), (b) request that the page be resent (ignored by most fax machines), or (c) give up.

[...]

Group I Fax
An old (now obsolete) standard for fax machines in which a page was transmitted in about six minutes at a resolution of 98 scan lines/inch. Group I devices frequently worked by attaching the page to be transmitted to a rotating drum (at 180 rpm) along which a photocell moves. Either amplitude modulation (the blacker the pixel the louder the tone) or frequency modulation (the blacker the pixel the higher the tone) can be used.

The gory details may be found in CCITT Recommendation T.2.

Group II Fax
An old (now almost obsolete) standard for fax machines in which a page was
transmitted in about three minutes at a resolution of 100 scan lines/inch.
Group II uses vestigial sideband amplitude modulation with phase shifts.
A white pixel is represented by a louder tone.

Group III
One of the current standards for fax machines in which a page is transmitted
in about one minute. See the definition of T.30 (below) for more details.

Group IV
A standard for fax transmission using ISDN at 64kbps.

I am also using a utility, fast.prg, that does 16MHz + cache on bootup and have no problems with it. You can actually see the difference running between 8 and 16 Mhz, so there is no need for any other programs.

Are you using some sort of auto config selector like Xboot or Superboot? They will over write your newdesk.inf with their saved version. This is just a wild guess. Also Xboot can switch your CPU speed / blitter. My problem was my problem when I first used Xboot, it kept turning off my blitter.

Source record: 168519

ST hardware gurus:

I have problems with my 1040 ST's mouse going right when I move it left, so that no matter what I do, the pointer gets stuck on the right side of the screen. I have opened the mouse up and cleaned it and it seems to sporadically (50% of the time) do this, but slightly less when I operate it with the whole top half removed (not a great way to keep dust out!).

Can I use a mouse from another system with the Atari 1040 ST? Can I do some maintenance that with fix this problem? The mouse has been taken very good care of and I'm the original owner. It gradually started doing this 8 months ago. It sucks now, because I use the system a lot to record electronic music (KCS / Tiger Software) and now I can't get anything done!

Dennis McGuire (mcguired@moose.erie.net) wrote:

: I recently moved up from an STe to a Mega STe. I have a utility
: in the AUTO folder which is supposed to put the computer in 16 Mhz cache
: mode. However, when I open the control panel, it says 8 Mhz. I
: change the setting in the control panel to 16 Mhz with cache, then save
: it and close the control panel. When I re-open the control panel, it
: says 8 MHz again! Am I missing something here???

It sounds like a similar utility I use which is run at bootup. Since I do
not have a control panel extention that let's me control the speed of
the computer, what you might do is to disable that particular CPX.

Another suggestion is to remove(rename) the utility from the auto folder
and try to simply use the control panel to set the machine on boot up
at 16MHz w/ cache but I'm not sure if this can be done.

: Also, is there any utility which provides a visual indication in
: the menu bar of the speed the computer is currently running at. I'm
: never sure. The ICD AdSpeed I had previously came with a utility which
: showed an 8 or 16 in the menu bar for the speed setting. I'd like to
: have that since I'm never sure what speed it's running at.

Don't know about that but it sounds interesting. Anyone know if such a
program is on atari.archive? I'd find it useful :)

5319. Help! Multisync monitor problems!

Newsgroup: comp.sys.atari.st
Date: 1995-03-29 02:41:13 UTC
From: Jay T Millar <jmillar@delphi.com>
Message-ID: <RCx6f9J.jmillar@delphi.com>
Source record: 168480

Hey all,

I've got a Falcon030 with a CTX CPS-1560/LR 15" flatscreen multisync monitor hooked up to it. I've had absolutely NO problems with this monitor until tonight....it's really nice.

In any case, after being using my machine for about 5 minutes, the display started to wobble and act very strange. So, I reset my Falcon and nothing changed! At present, the display flickers and wobbles eratically anytime a frequency change occurs, a window is moved or opened, even if I simply turn the contrast down, the display goes haywire!

Has anyone else had a similar problem? Could it be the cable? Could it be my VGA adapter? Is it my Falcon, or did something permanently hose the auto-syncing circuitry in my monitor?

Ugh! Any suggestions?

Thanks!

Now that I have a TT, I find my STe and it's equipment is just gathering dust in the closet. So I am putting the system up for sale. Here is what I have:

1040 STe w/ 2 megs RAM and TOS 2.06
SM124 mono monitor
Metal hard drive case with -
Syquest 88 meg removable w/ one cart
Maxtor 52 meg fixed drive
ICD AdSCSI+ (includes clock)
Internal power supply
Star Micronics NX-1001 printer
Lots of software, much of it installed on the hard drive already
Plenty of extras, like cordless trakball, monitor master switch, etc

I am asking $400 for the whole set-up. Plus shipping. Please respond with e-mail to either sirsmedley@delphi,do.com or ah096@leo.nmc.edu

: I get "no such files or directory".
: I am in directory /micros/atari/tos/p......
: Can anybody help me?

Sorry, but I was off yesterday, and have only just seen this message...

The full path to these files are:

micros/atari/tos/p/p144/MMACDEMO.SEA.hqx

and

micros/atari/tos/p/p121/gbnch402.lzh

You did not say how you are trying to access us....p144 and p121 are
only the directory names...the files are inside these.

If you have gopher, and/or WWW access, then please use these
methods...hensa is much easier to use via these methods.

I just got in touch with the English contact (brother-in-law of the
programmer) who says it needs the 7200 setting, not the default 9600. I
tried faxing him using that setting, and it works.

Good news. I will wait to decide until I have tried your English version.
What is the difference between Class 1 and Class 2? No-one yet has
explained the difference between class 2 and 2.0

It does work on my Falcon 4/65, TOS 4.04. Just copy drvin.prg and scc.prg to auto, at the end, and without running the setter. Unpack again if you are not sure you have an unadulterated copy. You _might_ need to disable buffering within your comms program. I have used 57600 and 115200 when conditions are good :)

It does work, honest!

This error is caused by case sensitivity. Both the directory X11 and the
executable X _must_ use upper case X. If you unpack the archive again and
log the names of all the extracted files you can tell what meeds renaming.
You will need a utility that can rename files to the appropriate case and
length.

I cannot guarantee to remain ahead of you on this :)

Axel, that's exactly what I was getting at.

With the new Version 6.0 of MS Word, both PC and Mac formats ARE the same.

Again, I'm not a real fan of Word 6 but maybe the free 6.0.1 'fix' that MS has just announced will change my mind (somehow I really doubt it). ;-)

By comparison, I think it borders on the amazing what some of our more talented Atari programmers have done in so little RAM and disk space.

I don't know the answer but I've forwarded your question on to John Trautschold, President of Missioware Software, who I'm sure will be able to help you... provided you give him your real name and/or the serial number of your copy of Flash II, of course. For some reason, he tends to prefer providing customer support to -customers-. ;-)

Give him a few days to respond, however, as he is currently headed towards Toronto for the big ACE '95 show this weekend.

Wish I could be there. It promises to be a great show. <sniff>

:
: Thanks in advance-
:
: David (lamarth@delphi.com)
Hi David,

it should be no problem running a SCSI I device on the Falcon. SCSI II means
primarily that there are more commands available, but it's fully compatible.
I run a SCSI I-Harddisk and a SCSI II-Syquest together on that bus without
any problems.

Source record: 168412

A friend of mine who has an Atari ST wanted to know if there is any way to get connected to the internet? Are there slip devices available for the Atari or any of the commercial online services? Any information would be very much appreciated. Please Email any hardware or software info to:

randow@lanl.gov

Thanks in advance,

Mike Randow

|> any help!

What you need is Uwe Siemet's BootConf program, which lets you change the system defaults in NVRAM. You can then set your machine to default to 80 columns without an auto program.

On a related note, I need a program to change to 80 column mono mode at boot up - yes, I know it can be set from NVRAM, but my boot selector program only works in 16 colour's or better, so I'd like to leave things setup as colour. But when I use MiNT-X, you need to boot in mono, so it means farting about with the NVRAM settings every time I want to use X, then setting them back so I can reboot & use my boot selector again.

Offers?

Craig.

Does anyone know what is the latest version of Adap Soundrack software?
I'm using versions 1.3 and 1.44b but they are over five years old programs.
I'm sure that there must be some newer releases of the software.
Where could I find one?
Is there anything for the Adap in the Internet?

5346. Crown_11

IT'S GOING FAST FOLKS! I have removed all sold items from this list. Updated 2-22-95!
MOST ITEMS I WILL SHIP UPS C.O.D.

For Sale. MAKE OFFERS!!!!

HARD WARE

PC Ditto II [PC hardware emulator] I have used this for many years. An excellent XT emulator with good speed. Very compatible. I have used up to DOS 5.0 and Wordperfect 5.1 with it without problems.
IB 5 1/4 inch drive [great with PC Ditto II]
SC1224 color monitor
Monitor Master
Spectre GCR [Superb Macintosh emulator!] with Roms and version 3.0 software
VideoKey [Allow audio/video connections to a t.v. monitor in low and medium rez modes]
Discovery Cartridge [From Happy Computers. Excellent software backup device and has many other uses]
MFD 1080 drive [3 1/2 drive works, the 5 1/4 drive non-functional and has been removed]

PLUS!!! I HAVE A LARGE ASSORTMENT OF ST RELATED MAGS, MANY WITH DISKS!

APPLICATIONS SOFTWARE

Multi-TOS [Multi-tasking on your ST compatible computer]
DC Desktop
DC Utilities
Hypercard Developers Kit [For Mac or Spectre GCR users]
WordPerfect ST [Last version developed by WordPerfect]
Wordflair II
Regent Word II
TV Title 2.0
PC-Ditto [PC software emulator, slow but very compatible. Good for occasional or emergency uses.]

GAME SOFTWARE

Purple Saturn Day
Impossible Mission 2
Championship Wrestling
Knight Orc
World Games
The Pawn
Guild of Thieves
Sinbad and the Throne of the Falcon

Rocket Ranger
The King of Chicago
Battle Chess
Midi Maze
Shufflepuck Cafe
Xenon 2 -- Megablast
Final Assault
Mean 18
Blackjack 3
Jinxter
Pac-Land
The Crimson Crown
Transylvania
Questprobe -- Spiderman
Superbike Challenge
Super Kidgrid
Thundercats

Plus the following compilation packages:

Precious Metal includes:
Arkanoid Revenge Of Doh [No, Homer Simpson isn't in this game. ;-)],
Captain Blood, Xenon, Super Hang-On

Triad includes:
Starglider, Defender of the Crown, Barbarian
Magnum 4 includes:
Batman, After Burner, Operation Wolf, Double Dragon

Microdeal Hot Disks Volume 1 includes:
Goldrunner, Jupiter Probe, Karate Kid II, Slaygon

The Story So Far Volume 1 includes:
Beyond The Ice Palace, Buggy Boy, Ikari Warriors, and
Battleships

Mega Pack includes:
Winter Olympiad 88, Mouse Trap, Plutos, Blood Fever, Seconds
Out, Frost Byte

5 Star includes:
Barbarian, Crazy Cars, Enduro Racer, Wizball, Rampage

Action ST includes:
Deflektor, Northstar, Trailblazer, 3D Galax, Masters of the
Universe

Giants Collection includes:
Out Run, Gauntlet II, 1943, Street Fighter

Premier Collection includes:
Exolon, Nebulus, Netherworld, Zynaps

ALL ORIGINALS!!! I am also the original owner and have taken good care of my equipment.

REMEMBER -- I WILL SHIP UPS C.O.D. CASHIERS CHECK OR MONEY ORDER ONLY. PURCHASER PAYS SHIPPING AND C.O.D. CHARGES.

5352. PC power supply for ST?

Newsgroup: comp.sys.atari.st
Date: 1995-03-30 00:00:00 UTC
From: foltin@cherokee.nsuok.edu
Message-ID: <D69xuJ.A9x@cherokee.nsuok.edu>
Source record: 168423

Could a power supply from an AT be used as a replacement for the Atari brick? All the voltages seem to be there, i.e. +5, +12 -12.

I noticed that the Atari has two 5v pins on the power supply. Does this mean that these need to be two separate, i.e. isolated 5v outputs, one of them could be taken from another output plug of the AT power supply?

I have not seen anything in the FAQ about this.

I would like to hear from anyone who has done this and if there are any problems or pitfalls.

Thanks.

Bela Foltin

5357. Re: 56001 DSP

Newsgroup: comp.sys.atari.st
Date: 1995-03-30 00:00:00 UTC
From: hillsp@genrad.co.uk
Message-ID: <1995Mar30.122925.217@genrad.co.uk>
Source record: 168541
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.next

In article <D5ryM6.Gu8@sdf.saomai.org>, (Evan Langlois) writes:

] Is it true that the 56001 DSP can execute 3 threads of execution
] simultaneously? I heard that the DSP has an average instruction
] execution time of 1 cycle - does this take into consideration the
] 3 execution threads, or can I actually get 3 instructions per cycle
] by using 3 different execution threads?

It is true that the 56001 can execute three instructions at one
time, but there are many restrictions to this, and I would certainly not
say it can execute three 'threads' at once.
The 56001 has three memory areas - Program space, X memory, and
Y memory. Data can be moved in each of these three spaces, or from register
to register in one cycle. This is where the three instructions per cycle
thing comes from. However, it is quite rare that a program will be in a
situation where it can move three items of data at a time, although if
you are programming in assembler it is worth rearranging your program to
try to do this as often as possible. The first restriction, therefore, is
that at least two of the three parallel instructions *must* be MOVE types,
and so one line of assembly could look like this:

```
add X1,A, X:(R0)+,X0 Y:Y1,(R4)+
```

where an instruction is executed in parallel with an X memory
move and a Y memory move.
The second restriction is that the instruction in the example above
is one which allows parallel moves with it. Many of the 56001's instructions
do not. In general, it is the MOVE and arithmetic instructions that do allow
parallel moves.
Note that the 56001 instruction set is nowhere near as versatile as
the 68000's. It is harder to write in 56001 assembler. Each instruction
has many restrictions as to which registers it can be used with for example.
There are far fewer addressing modes, and of course all the maths is done
in fixed point, not integer, which can make some applications harder.
Remember it is designed for one purpose - very fast signal processing, and
that is what it is good at.

As for average instruction execution times, most instructions do
take one cycle, but some take two. For example:

```
move R0,R1 takes one cycle, but
move #$123456,X1 takes two because the instruction opcode takes
```

one cycle to load, then the immediate operand takes another.
Thus the *average* instruction execution time will be slightly more
than 1 cycle per instruction. Exactly what it will be depends on the program

that is running. Branch instructions can also take more than one cycle,
but loops can be implemented which do take just one cycle per instruction,
even with the branch at the end.
This doesn't take into account the parallel move instructions, so,
theoretically, the 56001 could average three instructions per cycle if your
program never branched, and two out of every three instructions you wanted
were moves in separate memories! Unlikely I'm sure you'll agree. It depends
whether you call the parallel moves 'instructions' really.
Note also that the cycle time of the 56001 is half the clock
period. Thus the 56001 in the Falcon, clocked at 32MHz, can execute 16
million lines of code per second.

] Does anyone have a neural net simulator? Preferably in 56001 Assembler,
] or maybe C. There is an application I want to experiment with and I'm
] wondering if the Atari Falcon will be fast enough for it.

I don't know a great deal about neural nets, and I don't know if
a 56001 assembly language implementation of one has been written, but from
what I do know, I would imagine that it would be much easier to implement
on a 'normal' microprocessor. I can't see that a DSP would be any better
at it. However, saying that, it would certainly be capable of it. It is,
after all, a very fast processor, but if speed is not quite so important,
you'd be better off programming the 68030, or writing in C, for this
particular application.

Hope this gives you some guidance.
Paul Hills

5358. Speed of Light 3.7

Newsgroup: comp.sys.atari.st
Date: 1995-03-30 00:00:00 UTC
From: awatson@pacifier.com
Message-ID: <3lejqt$ha7@pacifier.com>
Source record: 168542
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Stuart,

I just obtained the latest Speed of Light 3.7, and am a registered user.

Some time ago, I wrote a utility titled "RUNLOW" that allows you to run Low Resolution programs from medium resolution. It was originally inspired by SOL's Low Resolution requirements on standard ST's. It has worked great for all versions up to 3.5.

However, something has changed in 3.7 that prevents RUNLOW from operating correctly. As many ST users use RUNLOW to launch Speed of Light, I would like to devise a solution to this problem...

Therefore, I was wondering if you could tell me any system variables, memory addresses, OS calls, etc. that the new version uses but the old version does not?

Version 3.7 doesn't come up with proper color scheme, and doesn't display pictures properly when used with RUNLOW.

Any assistance would be appreciated.

I personally went back to 3.5, because switching to Low Resolution is too much of a hassle for frequent use...

By the way, I like the addition of .IMG file support. .GEM support would be a nice addition for future versions!

Thanks,

Anthony Watson

Great deals here:

NEC 3Xe external CD-Rom drive (triple-speed, all formats, SCSI1/
SCSI2 switchable, 50-pin cent-SCSI2 cable, brand new,
was supposed to go on a friend's ST, but his hard drive
wouldn't cooperate and he gave up) $250

ICD Link 2 Host Adaptor $ 90

ExtenDOS Pro (New) $ 30

Gemini CD for Atari (Used) $ 20

Labtec external speakers (Used, plug into 3Xe or Falcon) $ 15

All above for: $350

This is a turn-key system for an ST(e), just plug and play, prices
include shipping in the continental US, can negotiate overseas
delivery.

Also:
Populated RAM Gizmo upgrade board for Falcon. 4-4 Meg SIMMs give your
F030 14 Megs! (Used, requires removal of useless internal
speaker) $500

SIMMs without Gizmo: $450

Prices include shipping and installation (if desired). Board is in
perfect shape, I just want to use the money to get a Speed
Resolution Card.

>to the root. This can get a little tendious(CLI anyone? 8^) Has anybody else
>had this problem? or can suggest a solution? -Roger?

All my ACC are in my ACCS folder using ACC1.3 TSR, no problems there and some
times I can switch back to my root of C:\ for testing some times...

All my CPX's are in D:\CPX\

You must not give it the ACC path as C:*.acc this is WRONG

Give it C:\ACCS\ or C:\

This could all that you are doing wrong....

I have also found a New Type of ACC.PRG on some German sites called ACC_2_2
this has some added features and looks like it will work on the later
Ataries, but NOTE, it is in German...

That is right as it is compiled at the moment, except when I had a look in the sources, there did seem to be some popmail code in there (presumably from the PC or whatever code that it is based on). I've no idea whether that would work if the appropriate compile time flag was turned on, but would be interested to here from anyone if they are interested enough to try it! (I would, but I don't have a SLiP account just sitting here waiting for me to develop on!!).

Source record: 168537

Thanks everybody for your advice. I have acted upon it and gotten a copy of Warp 9, which is very nice.

Now I have a new problem though: I used to use a German auto-folder program called IconDesk to get lots of custom icons, assignable to any program name including wildcards. I cannot get Warp 9 and IconDesk to work together, even if I switch their orders around in the auto folder, etc. Short of upgrading to a new TOS (yes, I'm still only using TOS 1.00, bleagh!), does anyone know of another PD or SW program that allows additional icons besides the stanard 3 crappy GEM icons? Thanks!

5373. SCSI II question

Newsgroup: comp.sys.atari.st
Date: 1995-03-30 05:40:01 UTC
From: lamarth@delphi.com
Message-ID: <xc2Z3xB.lamarth@delphi.com>
Source record: 168536

Hi-

Can anyone tell me if a external SCSI I device can run on the Atari Falcon's SCSI II bus? I know that SCSI II is faster than SCSI I but is that the only limitation? If so, I would think that a SCSI I device would run on the SCSI II, it just wouldn't be as fast as a SCSI II device.

Thanks in advance-

David (lamarth@delphi.com)

5374. [Q] Towers 2 Demo wants PW at level 1!

Newsgroup: comp.sys.atari.st
Date: 1995-03-30 06:07:03 UTC
From: mbecroft@iconz.co.nz
Message-ID: <3ldhq7$eek@iconz.co.nz>
Source record: 168538

I have downloaded Towers II Demoversion. It worked fine for a while, bue one day, all going fine, I decided to save my game. I have saved a game before without any problems - I just chose the Disc Icon then Save Game, and put in a name.

Next day, when I went to load it again, Towers 2 said something like `Enter Password 6P:'. I thought you only needed a password to get past level 3 (and the password was obtained of course by registering)??? I have barely explored level 2, not got to level 3 yet (or I might have just been up the stairway once and back down again.) I have not found any keys, chains or secret doors which are mentioned by various people in this newsgroup.

Why does it want a password already??? I thought it would at least warn me before I saved my game that I would need a password to be able to load it again. I have Towers 2 1.1. The same thing happened another time with 1.0 (before I found the patch to 1.1.)

I have a Falcon030 with FPU, 16MHz CPU, RGB Monitor, 40meg IDE internal drive, TOS 4.04. I am running no TSRs or Accessories (apart from XControl.)

Thanks very much for any help,
Mario Becroft (mbecroft@iconz.co.nz)

From 73647.2735@compuserve.comThu Mar 30 11:18:41 1995
Date: 29 Mar 95 22:58:19 EST
From: Gordon Moore <73647.2735@compuserve.com>
To: zap@eskimo.com
Subject: Re: Superboot

Yes I am still providing support for Super Boot. Version 8.1 is the latest
version. The registration fee is still only $15, and if you would like the
latest version on disk it is an additional $4. The address listed in the
program is still valid, however it would reach me quicker at:
Gordon Moore
216 Lowry Lane
Lexington, KY 40503

Super Boot does have the capability of selecting up to 30 different
preset configurations by just pressing one key, or you can modify the
configuration on the fly. I currently have a 4meg STE with TOS 1.06
so you can be sure it will work very well on your configuration. If
you have any more questions just let me know.

GOrdon

I just recieved this from Mr.Moore so obviously he is still supporting
the program. Just for your information.

From: BobR@cup.portal.com
Message-ID: <136119@cup.portal.com>
Source record: 168354

Re: Using a PC power supply on an Atari...

There shouldn't be a problem using a PC supply for an ST... the current supply should be more than adequate.

The only reason the ST uses two pins for the +5v. lines is to supply more current than could be reliably handled by one pin.

BobR

5381. Q:ISO/Atari chars. in Connect

Newsgroup: comp.sys.atari.st
Date: 1995-03-31 00:00:00 UTC
From: hallvart@oslonett.no
Message-ID: <3lh8m0$500@sinsen.oslonett.no>
Source record: 168355

I want to know how I can use the ISO characters in documents I write "offline"
and ASCII upload into connect when online.

The UNIX computer I'm connected to uses ISO 8859-1 (Latin 1) character set, and
"Connect" supports it. It works fine to use those extended characters when
writing online, with "Connect", but what if I write email or something offline
and just upload it as ASCII files?
It doesn't seem to convert the Atari characters to the equivelant in ISO.
Is there a program that will convert all the extended characters/symbols etc.
so it will be the same in ISO, or better yet- a text editor that saves files as
ISO text?

Thomas Damms <damms002@acpub.duke.edu> wrote:
>I'm looking for a good database.
>It should be a relational databse and more or less dBase or FoxPro compatible.

TWIST II looks definitely the most powerful database for TOS-computers. If you use NVDI (Truetype/Speedo) and colours, it's almost excactly like FileMaker Pro (one of the best Mac/PC database) with fully user definable field layouts and easy manipulation of objects (text,file,sound,picture).
Don't know if it is dBase or FoxPro compatible, but there seems to be also user-definably input/output filters for odd formats.

Looks really good on a Falcon/TT. Demos are available from ftp (buggy (beta?), but vr.1 I've worked with is rock steady). That's the one I'm going to get soon when my financial matters get better (so maybe never :-)).

Wake up, all democoders and gamecoders - here's your chance to make some
money: when you sell a 100 graphical www-browsers (Mosaic-copy) for
50 dollars each (and you will sell more), you'll have 5000 dollars
cash in your hand. If you spend all your time coding anyway, do
something worthwhile and what people really need.

If Annius can't do it, maybe you can!

|> [This is, of course, rank speculation.]

This is not strictly true. Idealist uses AV_PROTOCOL, and calls ST-GUIDE
to use it as a text viewer, and I'm fairly sure this works without an
AV_SERVER present. It would be easy to 'fake' the AV messages to go
between accesories (which is what I assume Idealist acc version does).

Craig.

Date: 1995-03-31 00:00:00 UTC
From: abro@amath.unizh.ch
Message-ID: <1995Mar31.174013.4053@rzu-news.unizh.ch>
Source record: 168364

Hi!

I use Gnutar 1.11; it's quite fine. But in the archive there were no
man-page and no texi-file. Where can I get them(via ftp or so)???

Ciao, Arnt

From: cyberaaron@aol.com
Message-ID: <3lidae$t6q@newsbf02.news.aol.com>
Source record: 168365

I recently purchased a MEGA ST2. When I bought it, I was told that the Monitor and the Disk drive were 220V... When I recieved it, I found out that the disk drive was 115V and the CPU and Monitor were 220V needless to say (I live in the US.) I can't use any of it. Could someone tell me where I can get a replacement power supply for both of these, or if it's not to be had. would someone like to buy it?

CYBERAARON@AOL.COM

5392. Corrupted Disks: need hel

Newsgroup: comp.sys.atari.st

Er staat wel iets op umich, maar dat is niet veel. Ik heb de GEMINI CD en daar staan nog een paar dingetjes op. Ook niet echt overweldigend. Ik kreeg vandaag de nieuwe brochure van Walnut Creek CD's in handen en daar staat een CD vol met educational stuff in. Wel voor PC natuurlijk :-((

Buy/Build a PAK/3-030. It will give you 10 -14 times a bare ST when used
together with NVDI 3.xx. I know. I built both a 020 version @16 Mhz and a 030
version @32 MHz.

5397. Re: Fried Bits?

Newsgroup: comp.sys.atari.st
Date: 1995-03-31 00:00:00 UTC
From: kkallio@vipunen.hut.fi
Message-ID: <kkallio.796636532@vipunen.hut.fi>
Source record: 168371

We got this invitation some time ago... it's a bit old and there
might be changes, but hope it helps.

INVITATION === INVITATION

FRIED BITS 3 14.01.1995

After the success of the "Fried Bits Eastern Coding Convention 2" many people

ask us to make a third party, so we do it. These are the invitation for the:

"FRIED BITS EASTERN CODING CONVENTION 3"

organized by:

The INDEPENDENT.

The party will be held from the: 14.04.1995 to 17.04.1995

in the "Buergerhaus Obervieland" in Bremen, Germany.

Alcohol is allowed, but if somebody flips out we will kick him and his crew

immediatly...

This party will be held together with the Archimedes scene in order to deve-

lop better contacts between Atari and Archimedes groups. Some Amiga groups

will be invitate to (e.g Sanity, Lego).

At this time these Atari Crews announced their coming:

Animal Mine, Aura, Avena, The Avengers (France), Channel 38 (Belgium),

Cream, Inter, Lazer (Austria), Light, Mugwumps, NEWline, NPG, Risk,

Sanity (Amiga), DNT (France), EKO (France), MJJ Prod (France), Hydroxyd

(France), Dune (France), Sound Conexion, New Trend, The Chaos Engine,

ead Hackers Society (Sweden), Phobyx Creative, Synergy (Netherland),

New Beat (Sweden), Xperience (Archimedes) and many other groups...

****

* C O M P E T I T I O N S *

****

This time we have many competitions with many Hard- and Software prices. The total worth of all prices will be about 7.000 DM - 10.000 DM...

These Competitions will be held:

SINGLE COMPETITIONS:

* FALCON DEMO COMPETITION (The biggest prices ever...)

(Atari-Jaguar and so on...)

* FALCON 96ktro COMPETITION (1st price: 300 DM)

(2nd price: 200 DM)

(3rd price: 100 DM)

2 IN 1 COMPETITIONS:

* FALCON & ARCHIMEDES GRAFIX COMPETITION (many Hard & Software...)

* FALCON & ARCHIMEDES MUSIX COMPETITION (many Hard & Software...)

(Pro- and Digitaltracker)

(in one competition...)

The german computer magazine "ST-Computer", "Atari-Inside" and the french magazine "ST-Micro" (I think that was his name) will report about the party.The competition-prizes aren't set yet, but we're in touch with the local Atari-store and with other Computer-stores to get some ATARI-JAGUAR and many other Hard- and Software. Don't forget - THESE INFORMATION IS NOT 100% SURE AT THIS TIME. Informations about the prices will be given out at the party...

****

* P A R T Y I N F O R M A T I O N S *

****

Now some infos about the party:

HOW CAN I REACH THE PARTY?

- If you go by train:
- leave the central station an go to the tram called: "1 ARSTEN"
- enter the front and buy a ticket for: "3,00 DM"
- leave the tram by the station at: "KATTENTURM MITTE"
- follow the signs (500 m) with the heading: "FRIED BITS 3"
- If you go by car or plane wait for the official invitation...

WHAT WE HAVE...

- about 80-120 tables (1,40m * 0,70m)...

- workspace for about 200 - 250 people and computers...

- sleeping places...

- shower in house...

- some food and drinks will be sold in the house...

- 3x3m LCD-Videoscreen in a seperate conference-room with big and good
(500 W) sound boxes for Demo-releases...

- Pizza-Service from 12.00 am to 21.00 pm...

- 300m to the next Supermarket (only open on Saturday)

- 1,5km to McDonalds...

- perhaps monitor-renting (not for sure at this time, if you wanna rent
a monitor ask quick!)...

WHAT YOU NEED...

- a warm sleeping bag...

- 30 DM for entrance...

- multiple cords...

ENTRANCE: 14.04.1995 09.00 am

END of PARTY: 17.04.1995 03.00 pm

If you're in Bremen and you don't know how to reach the party call "82 40 30"
and ask for an Independent member...

****

* I M P O R T A N T !!! *

****

If you're a new or an not well known group in the scene and you want to come
to the party, write me quick for an invitation, because we are very lack of
places...

My adress:

Frank Kurpiela (Stallion of Aura)

St.-Moritz-Str. 8

28325 Bremen

tel.: Germany - (0)4 21 / 40 08 81

You can also give a short info for your coming to the following people:

- Sepp Jo of Risk

- The Energizer of Lazer

- Anzac of Aura

- Smart of Channel 38

or send a pmail to:

* Frank Kurpiela @ HB2.maus.de

* Martin Seidel @ HB2.maus.de

* or Gorezone (++49-(0)4841-6069) to: "STALLION" or "SMART"

signed off

StaLLion of AURA / The IndePENdent...

PS.: These invitation is quick written. Sorry for the mistakes ;-))))

Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.next

I think the 56001 can also only make one external memory reference per
cycle, so one of your two MOVE instructions would have to be on-chip,
e.g. between a register and on-chip RAM/ROM. Or am I deluded?

5401. TTL Moniterm on a Falcon?

Newsgroup: comp.sys.atari.st
Date: 1995-03-31 00:00:00 UTC
From: jperez@uhunix3.uhcc.Hawaii.Edu
Message-ID: <D6B9DA.53p@news.hawaii.edu>
Source record: 168429
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

A Moniterm (Viking) 19" mono monitor just became available to me - I understand it accepts a digital/TTL signal, and I was wondering if there might be any way to coax this into working on a Falcon. Is there any type of analog to digital IC that could be fashioned so as to convert the VGA/Falcon signal into something that the Moniter can understand?

Please - this 12" monochrome is killing me!!!!!!!!!
Help!

5405. What TOS?

Newsgroup: comp.sys.atari.st
Date: 1995-03-31 00:00:00 UTC
From: "<Worried? You should be.>" <cs2ev@herts.ac.uk>
Message-ID: <Pine.SUN.3.91.950331110809.15724A-100000@altair.herts.ac.uk>
Source record: 168433

Here's a few questions for you ol'. Answers on a postcard to......

I'm confused about TOS numbering and a few other things.

My old STe was TOS 1.6 but all over the place I see it refered to as TOS 1.06 which is correct? Are they 2 different versions? Or are they the same but used in different contexts?
My new STe has TOS 1.62, I've never seen this refered to as anything different.

While on the subject of TOS does anyone know the advantages of upgrading to TOS 2.06? Pretend your a salesperson trying to sell me it. Does it handle bigger hard drive partitions? Better desktop?

Finally what is the maximum size HD partition the STe (TOS = 1.62) can handle, I'm told it's 32MB (Bit of a sod it, like me you want to get a 540MB drive)? 540/32= A hell of a lot of drive icons on desktop!

Thanks in adnavce.
P.S could you please mail me direct if possible?

From Ray Smith.

>Mine was stolen recently and I trying to get a quote for my insurers.
Don't you have "new for old"? Most UK house contents policies are such.
This means that if you lose something that is not directly replaceable,
they should get you the nearest current alternative. On this basis, you
could claim for a Falcon. I had a similar situation when my HiFi was
taken; the old models were no longer available, so I got the replacement
models out of Norwich Union, no problems.

As for STs, they sell them in Tempo (Staples Corner) and some other places.
Try Systems Solutions. But, if you want a Falcon, claim it.

Source record: 168437

In article
<Pine.SUN.3.91.950330160736.17486A-100000@resun03.roe
.ac.uk>, at@roe.ac.uk says...

>HENSA archive. It's in .zoo format and I haven't a
clue how to use the
>zoo.ttp program. I find the manual incomprehensible

From what I remember about this, I could not get it
to work properly from the Desktop (ie entering the
parameters into the 'request' box after double
clicking the .ttp icon). It needs to be run from a
Command Line shell or, better still, use the ZOOBOOY
shell or the 2-in-1 shell which I think you *should*
find in the HENSA archives. Alternatively, check the
Imperial College archives (FTP: src.doc.ic.ac.uk,
dir: packages/atari/umich/archivers(?)).

If you should get really stuck, email me direct
(ps1908@scitsc.wlv.ac.uk) and I'll send you a
UUENCODED zip file with the ZOOBOOY and ZOO programs.
However, if you email me by Monday, it'll probably be
Wednesday before I can sort the files/mailing out, so
if you're in a hurry then the archives will probably
be your best bet.

Best Wishes ... Steve Ridd

5410. CHEAP!CHEAP! SW, Books, 520ST!

Newsgroup: comp.sys.atari.st

Mucho ST stuff for sale. Picked up a 1040 with software (and
extra stuff), and I just have no room for the following stuff.
Check it out! Hardware, books, software

HARDWARE*HARDWARE*HARDWARE*HARDWARE*HARDWARE*HARDWARE

Atari 520STm - 512k, external-drive model. Comes with SF354
drive. Computer has both RF modulator (TV output) and composite
video output. Clean (looks absolutely like new) and works great;
comes with original box, all manuals, mouse, and original disks.
Bargain at $50

Future GTS-100X double-sided drive. Like new in appearance and
function. Formats to 82 tracks no prob. $40

Monitor Master - allows switching between ST color and monochrome
monitors with no unplugging. Also offers composite/audio outputs
so video recorder or amplifier can be hooked up at the same time
as the monitor! Like new! $10

Video Cable: Hook any of the ST computers to a Commodore 1084 RGB
monitor. Works great!! $5

BOOKS*BOOKS*BOOKS*BOOKS*BOOKS*BOOKS*BOOKS*BOOKS*BOOKS

Abacus Books:

Abacus #1 - The Atari ST for Beginners $3
Abacus #2 - Atari ST Internals $3
Abacus #3 - GEM Programmer's Reference $3
Abacus #4 - Atari ST Machine Language - $3
Abacus #5 - Atari ST Tricks & Tips - $3
Abacus #8 - Atari ST Peeks and Pokes $3
Abacus #10- Atari ST Intro to MIDI programming $3
Abacus #11- Atari ST BASIC to C $3
Abacus #12- Atari ST 3-D Graphics - $3
package: all Abacus books for $20

Compute Books (Compute always had great books!)

Kids and the Atari ST - $1
ST Applications - $2
ST Programming in C - $2
Intro to Graphics and Sound on the Atari ST - $2
The Elementary Atari ST - $2
package: All Compute books for $5

"The Atari ST Book" - tips, instructions, secrets, hints for 520/1040/Mega ST. $2

Working with the Atari ST - Overview of the ST's CPU, Graphics system, music system, device system, GEM, TOS, more! $2

SOFTWARE*SOFTWARE*SOFTWARE*SOFTWARE*SOFTWARE*SOFTWARE

WordPerfect for ST - latest version. Includes full documentation, original package, and all disks. I've been able to save a document with this and call it up with WP 5.1 for DOS at school and print on the laser printer - all page formatting intact! $15

DEGAS Elite - Great design and art program!! Cut and paste between 8 screens! Comes with manual. $5

Art & Film Director (Epyx). Complete paint and animation program that brings your creations to life. Compatible with Neo and Degas. New in wrapper. $3

The Advanced OCP Art Studio (Rainbird) Comrehensive, user friendly art and design software. New in wrapper. $3

Paint Pro (Abacus Software) - Paint program. $1 New in wrapper.

ST Games! All have docs.
* = have original box too
** = new in box

[Prices are for a single game. Feel free to make offers on package deals! NEGOTIATIONS WELCOME!! (It's less work/time for me to discount a group and send as a package).]

Combo game packages (these come with box in a set!)

1. ST Mega Pack: a. Blood Fever \
b. Winter Olympiad \
c. Seconds Out / $3
d. Frostbyte /

2. Giants: a. Gauntlet II - Atari Games (JUST LIKE arcade)
b. Outrun - Sega (JUST LIKE arcade)\
c. Street Fighter - Capcom \
d. 1943 - Capcom / $5

Alcon $2 ** - Taito (JUST LIKE arcade)
All Aboard $1 ** (kids- build a model train on the ST)
Arkanoid $3 * - Taito (JUST LIKE arcade)
Battleship $2 ** - Epyx (classic game w/some animation)
Bobo $2 ** (looks like cartoons- arcade-style escape from prison)
Bride of the Robot $2 ** ("adult" graphic adventure-looks rude)
Bubble Bobble $2 ** - Taito (JUST LIKE the arcade)
Bureaucracy $2 * - Infocom (text adventure?)
Championchip Wrestling $2 ** (you can be like Hulk Hogan)
Crash Garret $2 ** (European flying game)

Death Sword $2 ** - Epyx (arcade-style sword combat game)
Devon Aire $2 ** - Epyx (3-D graphic adventure)
Dive Bomber $2 * - Epyx
Dragon Scape $2 ** (400-screen fantasy shoot 'em up)
Final Assault $2 ** - Epyx (mountain climbing)
Flight Simulator II $3 - SUBlogic

In article <RCx6f9J.jmillar@delphi.com>, Jay T Millar <jmillar@delphi.com> writes:

] I've got a Falcon030 with a CTX CPS-1560/LR 15" flatscreen multisync
] monitor hooked up to it. I've had absolutely NO problems with this
] monitor until tonight....it's really nice.
] In any case, after being using my machine for about 5 minutes, the
] display started to wobble and act very strange. So, I reset my Falcon
] and nothing changed! At present, the display flickers and wobbles
] eratically anytime a frequency change occurs, a window is moved or
] opened, even if I simply turn the contrast down, the display goes
] haywire!
] Has anyone else had a similar problem? Could it be the cable? Could
] it be my VGA adapter? Is it my Falcon, or did something permanently
] hose the auto-syncing circuitry in my monitor?

Yes, I had a similar problem, but not exactly. Before I bought a
CTX SVGA monitor for my Falcon, I was using it on a colour TV. After using
the machine for a few minutes, the display went flickery and ended up black
and white. I didn't have a SVGA monitor at the time, so I wasn't sure what
that would look like when this happened, but maybe I now know! I have had
two Falcons, and both of them did this. I thought it might be a common
fault, but no-one on internet or in the Falcon Owner's Group seemed to
know anything about it.

Try your machine on a TV and see if it is doing the same as I
described. If it is, I'm sorry, but I couldn't see anything wrong inside
the machine, no ICs were excessively hot, and since it was still under
warranty, I just sent it back to the dealer.

It probably isn't the cable or adaptor, since you say it happens
when windows are moved on the screen.

Here's hoping you're still under warranty.

I have an Atari 2mb ST system for sale. Includes Mega ST CPU,
Atari SM124 monitor, Indus GT DD drive, 20mb Supra hard drive,
and Spectre GCR to run Mac software. Any reasonable offer for system
will be accepted.

] I have a 4 meg Falcon with an 85 meg internal HD sans fan. My Falcon
] flakes out after relatively brief up time. Having an external HD would
] probably reduce the internal heat significantly but the additional RAM
] would offset that in my mind.

] Try unplugging your fan and see what happens (I'd be interested in
] knowing). The only problem I run into when my F030 overheats is with
] the I/O ... it can't read or write. But I have never lost a file.

Unless it is absolutely necessary to use your machine without a fan,
I really wouldn't suggest that you even try it without. Although Marshall's
machine wasn't permanently damaged when it overheated, that's no assurance
that yours won't be.
Electronic components are rated to work at a maximum temperature.
Beyond that, the supplier won't guarantee anything. Often, when they cool
down they work OK again, but bipolar (and sometimes MOS and CMOS) components
can experience thermal runaway leading to permanent damage.
I'm sure when Atari designed the Falcon, they did the necessary
calculations or empirical tests which led them to the conclusion that a
fan was necessary. They certainly wouldn't have put it in just for the hell
of it, with the ensuing added cost.
Disconnect it at your own risk!

In a previous article, r.c.smith@herts.ac.uk wrote:

> I'm confused about TOS numbering and a few other things.

TOS 1.6 and 1.06 are one and the same. The correct ID is 1.06.

If you've always wanted a MegaSTe or a TT but just couldn't afford one, then upgrading to TOS 2.06 is the next best bet. It gives you the improved functionality and new features of the MegaSTe desktop without having to spring for the whole machine.

I don't have a list of all the new features/improvements to 2.06 but maybe someone here does. But here are most of them, I think:

- custom icons
- install any application on the desktop
- install a printer icon on the desktop
- set any application to 'autoboot' status
- link any document type to an application
- set default directories
- 'bottom-to-top' window reordering command
- make function key ('hot key') assignments
- assign keystrokes to each drop down menu item
- a file search menu command
- set a file mask for each window
- up to 7 windows open at a time
- read-only files have an identifying marker
- multiple NEWDESK.INF files may exist
- Extensible Control Panel (supports up to 99 CPX extensions)

What Atari did here was lift many features offered by third party utilities such as NeoDesk, MaxiFile, HotWire, and others and incorporated them into TOS. It works well, IMHO.

BTW, if you can find a TOS 2.05 set at a very good price, go ahead and buy them. Even though 2.06 was a bug fix for 2.05, I used 2.05 for a couple of years with nary a problem.

Make sure the Calamus modules you are using are 'SL-compatible.'

If you (or anyone else) are having problems with their registered copy of
Calamus SL, why not go direct to the source?

Send your email enquiry to Nathan Potechin of ISD at potechin@genie.geis.com.
It would polite to reference your Calamus SL serial number, too. ;-)

There is also a very active support topic on GEnie for all GEnie subscribers.

I'm not all that sure about software to allow you to use PC CDROMs but
send email to Greg Kopchak (hope I got that right) of It's All Relative
Software at greg@genie.geis.com and he'll be able to answer all your Atari
CDROM questions.

Twist his arm, and he can also sell you the CDROM stuff you need. :)

>flaky dollar-rate), another 599 for a farmcard with 4 T800's on it,
>and another 599 for the Mega ST I/O card.
>
In reply to the many requests for ATW specs I start with a warning:

ACN bought the entire 'unused' stock from the warehouses of Atari Benelux (European Distribution Center). That included Lynx consoles and software, 2600, old ST's, TT's, MEGA ST's, PC's, XL/XE etc. Part of it was new, part of it were defective units.

The ATW parts they bought came originally from the Braunsweig Research Center (Germany) 5 years ago and were just unused parts. ACN didn't get complete machines and didn't get housings either and as far as I know they didn't get the ATW software and documentation either. And without OS and documentation the ATW is useless. There is probable no way to get the documentation and nobody at Atari is able to help you since all the people of the ATW project left Atari years ago.

So here are the specs:

- T800 transputer at 20 MHz (a T800 runs 10 MIPS, has 4K internal memory and a 32 bit built-in floating point processor
- 4Mb RAM (120ns)
- Graphic modi: 0: 1280 x 960, 16 colours out of 4096 colours
1: 1024 x 768, 256 / 16 million
2: 640 x 480, 256 / 16 million
3: 512 x 480, 32 bits/pixel (true colour)
- High speed pipelined raster-op Blitter (Blossom), optimised for XWindows. (Note 1)
- 1Mb video memory (100ns), connected to both the system- and videobus.
- 4 slots for farm - and/or memory cards

Expansions:

- "Farm" card (= 4 transputers on 1 board + 1Mb RAM per transputer) max. 4 cards = +/_ 170 MIPS
- 20 Mb memory card, max. 3 cards

Software:

Maybe you can buy the software from Perihelion distributor DSL in the UK. In my time they were very expensive. I couldn't find their address but if you wish I'll try to find that as well.

Note 1; Blossom was a design of Richard Miller. Unfortually nobody was able to take advantage of it since it was hard to understand and it was not used for the XWindows inplementation. I did some tests with Blossom and found out that it made pixel errors in some of the modi and some of it's blitting functions didn't work correctly. Richard left the project in an early stage and became Atari's VP Technology and was never able to finish it. (No bad words about Richard, he is the best designer I ever worked with and I found it an honour that I have been in the position to work with him. In fact I see some of the ATW knowhow back in the Jaguar of today).

Regards,

Wilfred F. Kilwinger
